SACE Tmax T/ML, Emax 2/ML

Shockproof circuit breakers

SACE Tmax T/ML, Emax 2/ML

Consultation guide

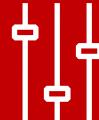

Chapter 1

Main characteristics

Introduction to the ML family, distinctive features of the series, product conformity and service.

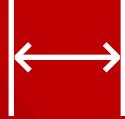

Chapter 4

Advanced features

New and simple to use functionalities suitable for every kind of marine power system.

Chapter 2

The ranges

Overview of ML family circuit breaker for naval application and critical environment.

Chapter 5

Dimensional drawings

Overall dimensions for ML family circuit breakers.

Chapter 3

Protection trip units

Latest generation protection trip units for power distribution and generation.

Chapter 6

Ordering codes

Ordering codes with configurator example.

CHAPTER 1

Main characteristics

- 02-03 Overview of the SACE ML family**
- 04-05 Distinctive features**
- 06-07 Product conformity**
- 08-09 ABB SACE Global service**

Overview of the SACE ML family

Based on the long experience, ABB SACE is proud to offer a new family of circuit breakers for naval application and critical environment which sets a new circuit breaker benchmark for the needs of today and tomorrow.

A modern ship's operational ability is fully dependent on its onboard electrical infrastructure. Over the years, the growth in the number of electrically powered subsystems on a typical naval vessel has made this infrastructure ever more complex and extensive. It has also led to a steady increase in power requirements. These trends lead to new customer and application needs. To meet these demands, ABB has now unveiled the innovative ML family, the evolution of the ABB circuit breaker into a multifunctional platform that is able to manage the next generation of electrical plants such as microgrids.

For over 50 years, ABB SACE has been building shockproof equipment for navies around the world. The considerable installed base of the company's products on ships of the world's main navies underlines the reliability of ABB SACE electrical equipment. Since the 1950s, the company has been manufacturing circuit breakers with special features not available on the same series of equipment destined for general use.

Distinctive features

SACE ML series is the ABB low voltage circuit breakers available from 160 A up to 6300 A and with the ability to efficiently and simply control electrical navy installations – from the traditional to the more complex with the highest availability and continuity of service.

The circuit breakers of the ML series have been realized with opportune changes of the standard version with the purpose to guarantee the operations also in presence of critical environmental conditions.

The low-voltage electrical distribution plants inside the modern ship are driven by these following growing needs:

- Ensure **service continuity** by minimizing the time needed to identify and isolate faults
- Guarantee **space optimization**
- Optimize energy efficiency maintaining the **performance**
- **Safety and ease** of use

Reliability and service continuity

ABB SACE ML circuit breakers are the most advanced and complete solution for ensuring service continuity.

With redundant actuators and built in communication modules, ABB ML circuit breakers take electrical system reliability to new levels.

ABB's solution is the only one that uses both a communication bus and electrical connections to prevent, detect and isolate electrical faults. Its unique "digital zone selectivity" function, identifies the fault zone faster and isolate it reducing the stress in the remaining active zone. As a result, the electrical protection is more robust and costly shutdowns are more effectively prevented. Moreover ML series features enhancements to the standard circuit breaker that guarantees operation under stressful conditions:

- **Shock resistance up to 20g (IEC 60068-2-27 and BR8470)**
- High temperatures and humidity range in a saline atmosphere; ML circuit breakers can be used in ambient conditions where air temperature varies between **-25 °C and +70 °C (-13 °F and +158 °F)**
- Presence of vibrations that are persistent and have a high amplitude in specific frequency ranges

—
(*) only MCCB

Dimension and weight optimization

SACE ML series offers maximum protection, best efficiency and it is the ABB low voltage circuit breakers available from 160 A up to 6300 A. The different levels of rated nominal current and breaking capacity levels have been studied to ensure optimal sizing for all ships' configurations. SACE Emax 2 /ML is the most compact circuit breaker on the market, which makes it possible to reduce the size of switchboards up to 30%. SACE Emax 2 /ML offers the highest performances in the smallest space. Less space is required in the switchgear and in the metal structures. The result is less oversizing, lower weight and, therefore, higher saving related to space optimization. SACE ML series makes it possible to standardize the circuit breaker support structures, considerably simplifying construction of the switchboards themselves. All trip units are easily interchangeable and all communication units can be installed directly on the terminal box with a few simple operations, making the complex system ready for a new digital experience.

Performance

Next-generation ships will use more advanced microgrid technologies to overcome current power distribution challenges. Electrical distribution on a ship is an islanded microgrid, connecting multiple power generators and energy storage systems, that manages directional power flows. By using smart technologies to protect, connect and control the electrical system, ships can operate more efficiently and productively.

ML low-voltage circuit breaker is the industry's first smart circuit breaker. Its embedded connectivity and load management software provides a comprehensive energy management solution.

The load profile optimization functions of ML circuit breaker reduce CO₂ emissions and fuel costs. The innovative circuit breaker safeguards a ship's mission- critical loads and generators, using advanced adaptive protection to maximize productivity under all conditions.

Safety and ease of use

The ML range is available in fixed(*), plug-in(*) and withdrawable versions, with double insulation between the front of the switchgear and the live parts to ensure operation in complete safety. All essential information is available in front shield and enables immediate identification of the status of the circuit breaker: open, closed, ready to close, charged and discharged springs. Maintenance is simple and safe. Thanks to the new front shield design, the main accessories can be installed without completely removing it. As a further guarantee of safety, the shutters of the fixed part can be locked from the front when the circuit breaker mobile part is removed. The shutters of the upper terminals are independent of those of the lower terminals to facilitate checking and maintenance operations.

The protection trip units are equipped with a large display which enables safe and intuitive operation. Furthermore the trip units can be programmed and consulted from a tablet, smart phone or portable PC via the Ekip Connect application some the advanced functionalities can be easily programmed thanks to predefined logic templates.

.

Product conformity

Quality, Sustainability and Customer Satisfaction have always been ABB's major commitment.

Resistance to shock and vibration

The ML circuit breakers are unaffected by vibrations generated mechanically or due to electromagnetic effects, in compliance with the IEC 60068-2-6 Standards and the RINA MIL regulations. Moreover ML circuit breaker are compliant with the following International SHOCK standard:

- IEC 60068-2-27 (20g-11ms)
- BR8470 (20g-25ms)

Approvals and certifications

ABB ML circuit breakers and their accessories conform to the international IEC 60947, EN 60947 (harmonized in 30 CENELEC countries), CEI EN 60947 and IEC 61000 Standards and comply with the following EC directives:

- “Low Voltage Directives” (LVD) no. 2006/95/EC
- “Electromagnetic Compatibility Directive” (EMC) no. 2004/108/EC.

Certification of conformity with the above-mentioned product Standards is carried out in compliance with the European EN 45011 Standard, by the Italian certification body ACAE (Association for the Certification of Electrical Equipment), which is recognized by the European organization LOVAG (Low Voltage Agreement Group), and by the Swedish Intertek SEMKO certification organization Intertek Semko which is recognized by the international organization IECEE.

Product conformity

The involvement of all company departments and organization of processes have led the company to develop, implement and certify management systems in compliance with international Standards:

- ISO 9001 for quality management
- IRIS for the quality of supplies in the railway sector (International Railway Industry Standards)
- ISO 14001 for environmental management
- OHSAS 18001 for the management of the health and safety of employees in the workplace
- SA 8000 for the management of social responsibility.

The ABB SACE testing laboratory, accredited by ACCREDIA in compliance with ISO/IEC 17025 Standard, provides both ABB and external customers with a qualified service for performing certification tests on devices and electric equipment of low and medium voltage in accordance with the relevant product Standards.

Thanks to the implementation of systems and their integration (Integrated Management System), ABB SACE, with a view to continuous improvement, has implemented processes with a focus on:

- quality, preventing defects and faults along the entire supply chain

- environment, reviewing production processes in terms of ecology and waste reduction, rationalizing the consumption of raw materials and energy, preventing pollution, containing noise emissions and reducing the quantity of rejects in the production processes
- health and safety of employees, offering a healthy and safe workplace in all of the various stages of work with a “zero accident objective”
- social responsibility, guaranteeing the respect of human rights and the absence of any discrimination throughout the supply chain, and offering a favourable and transparent working atmosphere.

A further commitment aimed at safeguarding the environment has been achieved by assessing products' life cycles (LCA, Life Cycle Assessment): this includes the assessment and improvement of the environmental performance of products from the engineering stage throughout their entire life cycle. The materials, processes and packaging used are chosen with a view to optimising the actual environmental impact of each product, including its energy efficiency and recyclability.

ABB SACE Global service

—

ABB's technical assistance service offers solutions aimed at supporting the customer in all stages of the lifespan of the circuit breaker in service and covering the entire chain of value; ABB is present from the moment of selection to the end of the life of the product, thereby guaranteeing the investments of its customers.

ABB supplies annual updates regarding the evolution of the circuit breaker ranges (Life Cycle Management) and for each product it provides details of associated services and the level of support available, so that customers can chose the products and spare parts best suited to their needs. ABB's organisation offers services that include installation and commissioning, technical training on the use and maintenance of products, the supply of original spare parts, corrective and preventive maintenance, equipment diagnostics, modernisation of systems with upgrades and retrofitting kits, consultancy services and personalised maintenance and service contracts. All this is supported by one of the most extensive global sales and service networks.

Retrofitting kit

Through continuous research targeted at the needs of the customer, ABB SACE Service has developed innovative retrofitting kits in order to simplify and speed up installation of a new circuit breaker, updating the customer's investment with the latest technology available and with very limited down times. The retrofitting kit between Emax2 and Emax is a retrofill solution: it is therefore possible to replace the withdrawable version of Emax with an equivalent Emax2 model without changing the switchboard busbars, by simply removing the fixed part of Emax replacing it with a fixed part of Emax2 which has been suitably modified with dedicated terminals.

Protection trip units

SACE ML trip units are the new benchmark for the protection, measurement and control of low voltage electrical systems. The result of ABB SACE's experience and research, they make ML circuit-breaker, embedding advanced functionalities, to become an all-in-one solution for as well distribution systems and microgrid.

The protection units are divided into different families which can be suitable for distribution protection and for generator protection. The range of trip units is available with many levels of performance to satisfy simple to advanced applications.

Thanks to their simplicity of assembly, the end customer can change the type of trip unit extremely rapidly, according to their own requirements and needs. This means an increased flexibility of use of the circuit-breakers with considerable savings in terms of costs thanks to better rationalisation of stock management. The complete, flexible protection trip unit offering, which can be adapted to the actual level of protection required, is shown in the following pages.

—
(1) If ordered loose
PR331/P and PR332/P
must be completed with
the "trip unit adapters"

The Tmax T4/ML, T5/ML and T6/ML circuit-breakers can be equipped either with TMD/TMA or TMG thermomagnetic trip units, moreover there is also a wide portfolio of electronic trip units composed by PR221DS, PR222DS/P, PR222DS/PD, PR223DS and Ekip E-LSIG. Similarly, Tmax T7 can also mount the latest generation PR231/P, PR232/P, PR331/P⁽¹⁾ and PR332/P⁽¹⁾ electronic trip units.

SACE Emax 2 Ekip protection trip units are the new benchmark for the protection, measurement and control of low voltage electrical systems.

The protection units, available in the LSI and LSIG versions, are divided into two families: Ekip for distribution protection and Ekip G for generator protection.

The Ekip trip units are designed to protect a vast range of applications, such as use with transformers, motors and drives. Ekip Dip, Ekip Touch or Ekip Hi-Touch can be selected, depending on the complexity of the system, the need to take voltage or energy measurements or to include control systems in switchgear.

Ekip G enables the protection of generators without the use of external devices that require dedicated relays and wiring. Ekip G increases efficiency from the design stage to installation, minimizing the time needed for realization and commissioning of the system, and ensuring high levels of accuracy and reliability of all protection devices required for running generators in applications such as naval, GenSet or cogeneration. Thanks to the Network Analyzer function integrated in all Hi-Touch versions, the quality of energy in terms of harmonics, micro-interruptions or voltage dips is monitored without the need for dedicated instrumentation. This allows effective preventive and corrective action to be implemented through accurate analysis of the faults, thereby improving the efficiency of the system. Here below there is a summary of the trip units portfolio for Emax 2 ML circuit breaker.

	Fields of application	Measurement and Protection of Current	Measurement of Voltage, Power, Energy	Measurement and Protection of Voltage, Power, Energy	Network analyzer
Ekip Dip	Distribution	with Ekip Multimeter	-	-	-
Ekip Touch		●	with Ekip Measuring	with Ekip Measuring Pro	-
Ekip Hi-Touch		●	●	●	●
Ekip G Touch	Generators	●	●	●	-
Ekip G Hi-Touch		●	●	●	●

All ML circuit-breakers are equipped with protection trip units that are interchangeable from the front with just a few, simple operations by the customer.

This enables personalization of the functions available, even during commissioning or when the circuit-breaker has already been installed. In particular, consists of:

- **Protection trip unit**, available with different interfaces and versions that range from basic to more complete; it contains a latest generation microprocessor that performs all the functions of protection and control.
- **Ekip Measuring Module**, connected internally to Emax 2/ML, performs voltage, power and energy measurements with high accuracy without requiring any external connection or voltage transformer. The Ekip Measuring Pro version also performs all protection functions based on voltage and power without the need for external units, thereby simplifying design and construction of the system.

- **Interchangeable rating plug** enables all protection thresholds to be adjusted according to the rated current, increasing flexibility for the customer. It is useful in installations that are prepared for future development or in cases in which the power supplied may be limited temporarily.
- **Main board** is the mechanical housing of the trip unit, which includes a micro-controller for measuring currents and the self-protection functions. The separation of trip units ensures excellent reliability and immunity to conducted and radiated emissions. Integrated new generation Rogowski sensors, which are sensitive to the true r.m.s. value of the current, guarantee high accuracy of both measurements and protection.

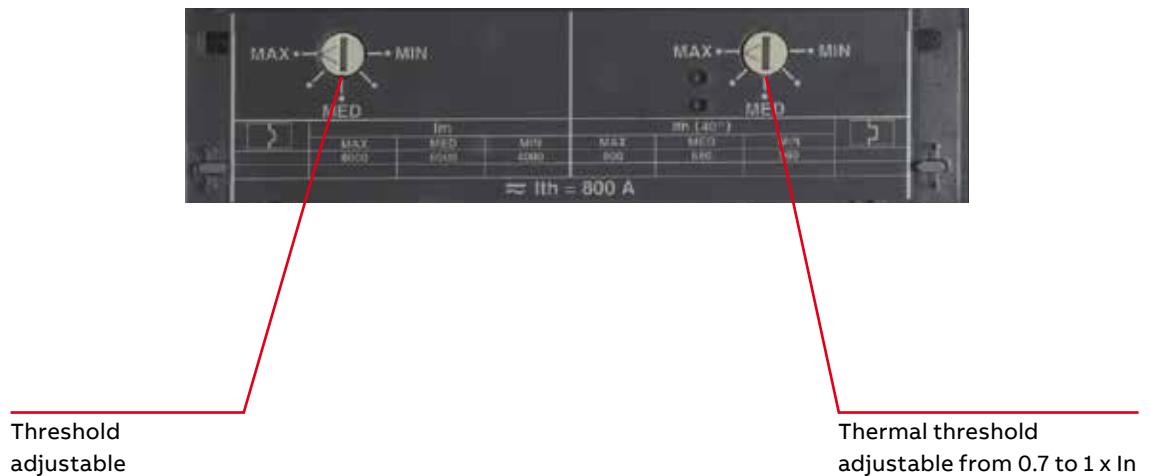

TMD/TMA and TMG

The Tmax ML circuit-breakers can be fitted with thermomagnetic trip units and are used in protection of alternating and direct current networks with a range of use from 20 A to 800 A. They allow the protection against overload with a thermal device realised using the bimetal technique and

protection against short-circuit with a magnetic device.

The four-pole circuit-breakers are always supplied with the neutral protected by the trip unit and with protection of the neutral at 100% of the phase setting.

TMA= thermomagnetic trip unit with adjustable thermal threshold ($I_t = 0.7 \dots 1 \times I_n$) and adjustable magnetic threshold ($I_s = 5 \dots 10 \times I_n$)
 TMG (for T5) = thermomagnetic trip unit with adjustable thermal threshold ($I_t = 0.7 \dots 1 \times I_n$) and adjustable magnetic threshold ($I_s = 2.5 \dots 5 \times I_n$)

Notes

- I identifies the setting current for protection of the phases (L1, L2 and L3) and of the neutral.
- The TMA and TMG thermomagnetic trip units which equip the Tmax T4, T5 and T6 circuit-breakers have the thermal element with adjustable threshold $I_1 = 0.7...1 \times I_n$. The set current value which is obtained using the special selector is intended at 40 °C. The magnetic element has adjustable trip threshold ($I_3 = 5...10 \times I_n$ for TMA and $I_3 = 2.5...5 \times I_n$ for TMG) with a tolerance of ± 20% according to what is indicated in the IEC 60947-2 (par. 8.3.3.1.2) Standard. The trip thresholds of the magnetic protection I_3 are a function of the setting used both by the phase and neutral protection.

PR222DS/P and PR222DS/PD

The PR222DS/P trip unit has protection functions against overload L, delayed S and instantaneous I short-circuit (version PR222DS/P-LSI). Setting of the PR222DS trip unit can be carried out by means of dip switches on the front of the circuit-breaker or electronically, using the Ekip T&P programming and Ekip Connect.

There is a single setting for the phases and neutral, for which one can decide whether to set the threshold of the protection functions to OFF, to 50% or to 100% that of the phases by means of two dedicated dip switches.

Furthermore, on the front of the PR222DS/P (or PR222DS/PD) trip units, signalling of pre-alarm and alarm of protection L is available. It is also possible to transmit remotely the alarm of protection L, simply connecting connector X3 to the dedicated contact.

The PR222DS/PD trip units allow circuit-breakers to be integrated in a communication network based on the Modbus® RTU protocol.

The PR222DS/PD release, with integrated communication and control functions, allows a wide range of information to be acquired and transmitted remotely.

(3) For T4 $I_n = 320 A$ and T5 $I_n = 630 A$, T6 $I_n = 1000 A \Rightarrow I_{max} = 9.5 \times I_n$ and $I_{3,max} = 9.5 \times I_n$
For T6 $I_n = 800 A \Rightarrow I_{3,max} = 10.5 \times I_n$ (4) Tolerance: $\pm 10 ms$ (6) $t = k/I^2$ up to the current value indicated, $t = k$ (equating to the chosen setting)
beyond the current value indicated

PR223DS and PR223EF

Apart from the traditional L, S, I, and G protection functions, the PR223DS release, available on T4 and T6, also offers the possibility of measuring the main electrical values. In fact, using the accessory VM210, and without using any voltage transformers, the user has access not only to the current values but also to the voltage, power and energy values.

For the neutral, it is possible to set the protection threshold of the functions to OFF, to 50% and to 100% of that of the phases. The pre-alarm and alarm signalling of protection L are also available by means of a dedicated LED on the front of the release. The PR223DS trip unit, with integrated ModBus RTU protocol based dialogue unit, allows a wide range of information to be acquired and transmitted remotely and to carry out opening and closing commands.

If the PR223DS trip unit is inserted in a supervision system, during the test and configuration with the PR010/T unit, communication is automatically abandoned and starts again on completion of these operations.

The PR223EF electronic trip unit available on T4, T5 and T6 in the L version (120 kA @ 380/415 V) for use in alternating current, is able to isolate a fault present in extremely rapid times. This performance is made possible thanks to the EFDP (Early Fault Detection and Prevention) algorithm, which is able to detect the short-circuit at its onset, exploiting analysis of the trend of the shunted current in relation to the current. The PR223EF trip unit therefore offers two performances simultaneously which, until today, were antithetic: selectivity and trip rapidity.

PR223DS and PR223EF

Socket for connection of Ekip T&P test unit and Ekip Bluetooth wireless communication unit

Socket for Ekip TT test unit

LED signalling alarm of the circuit-breaker

LED signalling the status of the circuit-breaker

Push button for operation mode selection (local/remote) and on-board diagnosis system

Protection functions and parameterisations

Protection functions	Trip threshold	Trip curves ⁽¹⁾	Excludability	Relation $t = f(I)$	EFDP zone selectivity*
L	Against overload with long inverse time-delay trip and trip characteristic according to an inverse time curva ($I^2t=k$) according to the IEC 60947-2 Standard	Electronic setting $I_1=0.18\dots1 \times I_{n}$, step 0.01 $\times I_{n}$ Trip between 1.1\dots1.3 $\times I_1$ (IEC 60947-2)	Electronic setting at $6 \times I_1$ $t_1 = 3\dots18s^{(2)}$, step 0.5s Tolerance: $\pm 10\%$	no	$t = k/I^2$ no

Ekip E-LSIG

Available for Tmax T5 in three pole and four pole version, Ekip E-LSIG is the integrated energy metering solution from 320 A to 630 A.

This trip unit can be set using manual setting using the relative dip-switches on the front of the trip unit, which allow the settings to be made even when the trip unit is off. But also using electronic setting, made both locally using Ekip T&P accessory and also via remote control, with version of trip unit with communication function.

The electronic setting have a wider range and a thicker regulation step.

With this new electrical trip unit, ABB offers an optimal solution for energy and power measurements without the usage of external accessories, as the device VM210

With Ekip E-LSIG T5, upon request, will be available simultaneously the communication, through internal bus, with ABB interface on the front of the switchgear HMI030 and, through system bus, with an external MODBUS network.

Protection function	Trip threshold	Trip curve ⁽¹⁾	Excludability	Relation	Thermal memory	
L	Against overloads with long inverse time delay trip according to IEC 60947-2	Manual setting: $I_1 = 0.4...1xIn$, step 0.04 Tolerance: trip between $1.1...1.3 I_1$ (IEC 60947-2)	Manual setting: $t_1 = 12-60s^{(4)}$ at $I=3xI_1$ Tolerance: $\pm 10\%$	no	$t = k/I^2$	no
		Electronic setting: $I_1 = 0.18...1xIn$, step 0.01 Tolerance: trip between $1.1...1.3 I_1$ (IEC 60947-2)	Electronic setting: $t_1 = 3...72s^{(4)}$ at $I=3xI_1$, step 0.5 Tolerance: $\pm 10\%$	no	$t = k/I^2$	yes
S	Against short-circuits with inverse short ($t=k/I^2$) or independent ($t=k$) time delay trip	Manual setting: $I_2 = OFF-3-6-9$ Tolerance: $\pm 10\%$	Manual setting: $t_2 = 0.25-0.50s$ Tolerance: $\pm 10\%$	yes	$t = k$	no
		Electronic setting: $I_2 = 0.6...10xIn^{(3)}$, step 0.1 Tolerance: $\pm 10\%$	Electronic setting: $t_2 = 0.05...0.5s$, step 0.01 Tolerance: $\pm 10\%$	yes	$t = k$	no

PR232/P

The PR232/P release, available for T7, provides protection functions against overload L, delayed short-circuit S and instantaneous short-circuit I (version PR232/P-LSI).

Setting the trip parameters of the PR232/P release can be carried out by means of the dip-switches. In particular, adjustment of the neutral

to 200% of the phase current requires setting protection L to respect the current-carrying capacity of the circuit-breaker.

To guarantee protection of the installation by means of the PR232/P protection release, it is necessary to select the rated network frequency (50/60 Hz), by means of the special dipswitch.

Protection functions and parameterisations

Protection functions	Trip threshold	Trip curves ⁽¹⁾	Thermal memory ⁽²⁾	Excludability	Relation t = f(I)	
L	Against overload with long inverse time delay trip and trip characteristic according to an inverse time curve ($I^2t=k$) according to IEC 60947-2 Standard	$I_1 = 0.40 \dots 1 \times In$, step = $0.04 \times In$ Trip between $1.1 \dots 1.3 \times I_1$	at $6 \times I_1$ $t_1 = 3s$ $t_1 = 6s$ $t_1 = 12s$ $t_1 = 18s$ Tolerance: $\pm 10\%$	■	-	$t = k/I^2$
S	Against short-circuit with inverse short time delay trip and trip characteristic with inverse time ($I^2t=k$) or definite time	$I_2 = 0.6 - 0.8 - 1.2 - 1.8 - 2.4 - 3 - 3.6 - 4.2 - 5 - 5.8 - 6.6 - 7.4 - 8.2 - 9 - 10 \times In$ Tolerance: $\pm 10\%$	at $10 \times In$ $t_1=0.1s$ $t_1=0.25s$ $t_2=0.5s$ $t_2=0.8s$ Tolerance: $\pm 10\%$	■	■	$t = k/I^2$
I	Against short-circuit with instantaneous trip	$I_3 = 1.5 - 2.5 - 3 - 4 - 4.5 - 5 - 5.5 - 6.5 - 7 - 7.5 - 8 - 9 - 9.5 - 10.5 - 12 \times In$ Tolerance: $\pm 10\%$	instantaneous	-	■	$t = k$

(1) These tolerances hold in the following conditions:

- self-powered trip unit at full power (without start-up)
- two or three-phase power supply.

In conditions other than those considered, the following tollerances hold:

Trip threshold	Trip time
S $\pm 10\%$	$\pm 20\%$
I $\pm 15\%$	$\leq 60ms$

(2) Active up to 7 min. after tripping of the breaker

(ON/OFF setting by means of PR010/T test unit).

PR332/P

The SACE PR332/P trip unit for Tmax T7 (available in four versions: PR332/P-LI, PR332/P-LSI, PR332/P-LSIG and PR332/P-LSIRc) is a sophisticated and flexible protection system based on a state-of-the art microprocessor and DSP technology. Fitted with the optional internal PR330/D-M dialogue unit, PR332/P turns into an intelligent protection, measurement and communication device, based on the Modbus® RTU protocol. By means of the PR330/D-M, PR332/P can also be connected to the ABB EP010 Fieldbus plug adapter, which makes it possible to choose among several different networks, such as Profibus and DeviceNet.

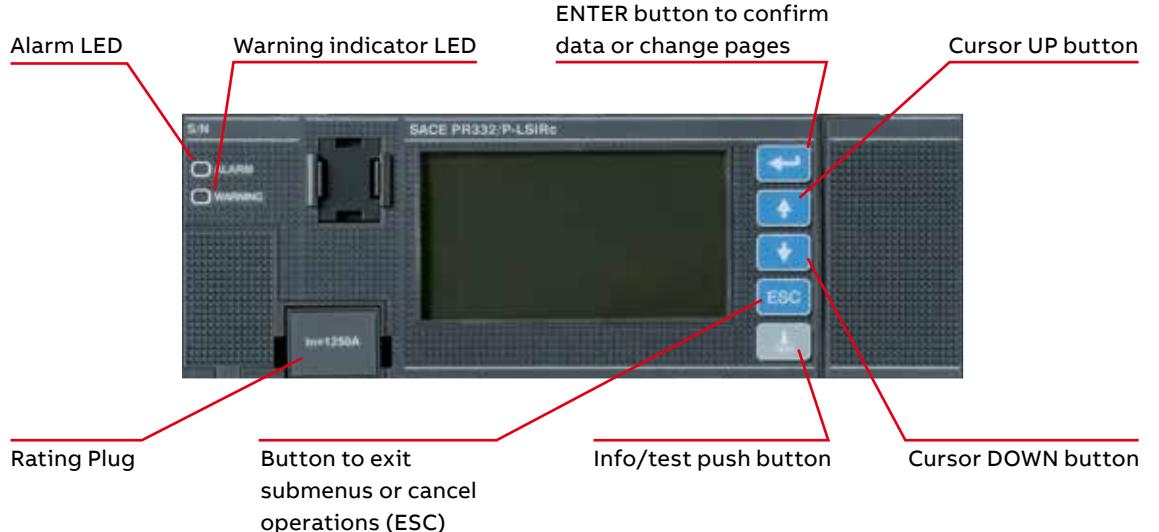

The new PR332/P is the result of ABB SACE's experience in designing protection trip units.

The exhaustive range of settings makes this protection unit ideal for general use in power distribution.

Access to information and programming using a keyboard and graphic liquid crystal display is extremely simple and intuitive.

An integrated ammeter and many other additional features are provided over and above the protection functions. These additional functions can be further increased with addition on board of the dialogue, signalling, measurement, and wireless communication units. All the thresholds and trip curve delays of the protection functions are stored in special memories which retain the information even when no power is supplied.

Ekip Touch

Ekip Touch is the new protection trip unit for SACE Emax 2 that provides a complete series of protections and high accuracy measurements of all electric parameters and can be integrated perfectly with the most common automation and supervision systems.

The simple and intuitive interface enables the operator to access all the information and settings rapidly and easily by minimizing installation and commissioning time.

The Ekip Touch protection functions can be further increased by using the Ekip Measuring Pro measuring and protection module. With this module, all the protection functions linked to voltage, frequency and power can be enabled, thus making Ekip Touch a multifunction unit that can measure, control and protect even the most complex installation.

- Key:
1. Wide high-resolution colour touch-screen display
 2. Power-on LED to indicate correct operation (watchdog)
 3. Pre-alarm LED
 4. Alarm LED
 5. Home pushbutton to return to home page
 6. Pushbutton for test and indicating cause of trip
 7. Test and programming connector

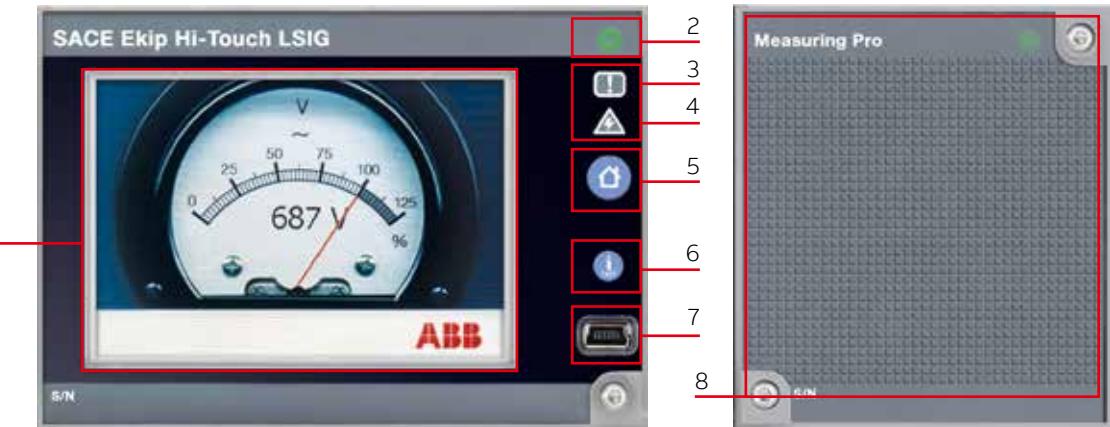

Ekip Hi-Touch

Ekip Hi-touch of SACE Emax 2 is a high-performance multifunction unit that is extraordinarily versatile and can be used in even the most complex installations. Ekip Hi-Touch, in fact, features exclusive functions such as: directional protection, restricted earth fault and dual setting of the protections. In addition, Ekip Hi-Touch is supplied with the exclusive Network Analyzer function that can monitor the quality of the power absorbed by the installation in accordance with existing standards.

Ekip Hi-Touch boasts all the features of Ekip Touch; as standard, it features the measuring and protection module Ekip Measuring Pro and can also be fitted, like Ekip Touch, with the additional features provided by the internal modules and by the external accessories. The front interface of the unit, which is common to Ekip Touch, is extremely simply because of the touchscreen colour display; it is able to show measurements, bar graphs and sine curves of the different electrical values.

- Key:
1. Wide high-resolution colour touch-screen display
 2. Power-on LED indicating correct operation
 3. Pre-alarm LED
 4. Alarm LED
 5. Home pushbutton to return to home page
 6. Pushbutton for test and for indicating cause of the trip
 7. Test and programming connector
 8. Ekip Measuring Pro module, with relative LED power on

Ekip G Touch

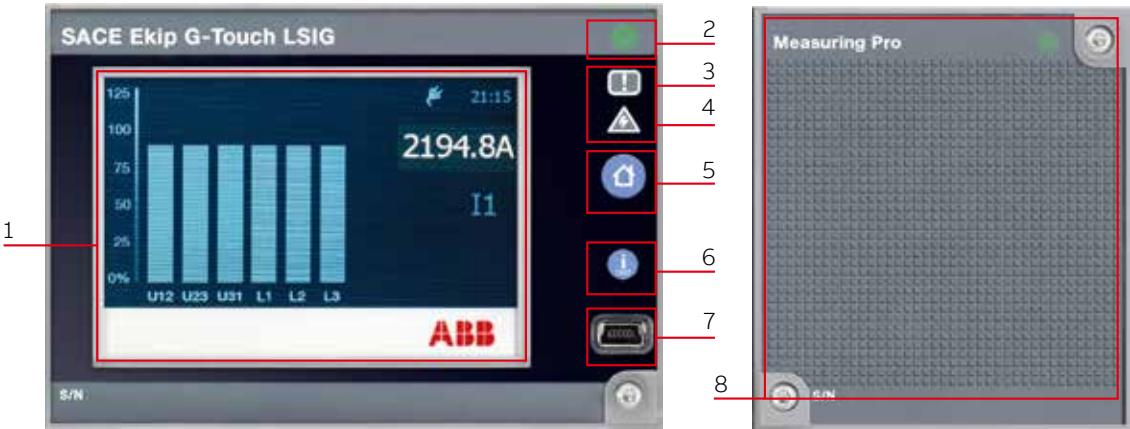

Ekip G Touch is the new protection trip unit designed for use in applications with generators, such as Genset, cogeneration and marine applications, in conformity to international standards IEC 60034-1 and IEEE

C37.102. Ekip G Touch has been approved by the main shipping registers and enables the number of components installed, such as external protection devices, current sensors, voltage transformers and the relative cabling, to be reduced. The reductions allow the installation to be significantly simplified. In addition, all the protection functions can be tested individually, using the Ekip T&P device that enables the function to be tested before commissioning.

The unit is available in the Ekip G Touch LSIG version and features all the characteristics provided by Ekip Touch. The Ekip Measuring Pro measuring and protection module is supplied as standard and, like Ekip Touch; the functions can be increased further using the internal modules and the external accessories.

The front interface of the unit, which is common to the Ekip Touch family, is characterised by a wide, high resolution touchscreen display that is simple to use and displays measurements and alarms clearly and accurately.

- Key:**
1. Wide, high resolution touchscreen display
 2. Power-on LED indicating correct operation
 3. Pre-alarm LED

Ekip G Hi-Touch

Ekip G Hi-Touch is the new benchmark for the protection of low voltage electric generators. It provides optimum protection, even in complex installations, due to exclusive functions such as protection against frequency creep and maximum directional current.

Ekip G Hi-Touch, like all Hi-Touch trip units, is supplied as standard with the Ekip Measuring Pro measuring and protection module and enables an independent second set of protections to be set.

In addition, the Network Analyzer function enables it to monitor the quality of the power delivered by the generator.

Ekip G Hi-Touch is available in the LSIG version and ensures all the protection, measuring and control functions of Ekip Hi-Touch and the specific protections for Ekip G Touch generators. The user interface and the accessories are common to the rest of the family.

		Secondary voltage	100...120		100, 110, 115, 120	
		Tolerance	± 10%			

(1) With Vaux all thresholds are available. Without Vaux minimum threshold is limited to: 0.3In (with In = 100A), 0.25In (with In = 400A) or 0.2In (for all other ratings)
 The tolerances above apply to trip units already powered by the main circuit with current flowing in at least two-phases or an auxiliary power supply.
 In all other cases the following tolerance values apply:

ABB Code	Trip threshold	Trip time
L	Trip between 1.05 and 1.2 x I	± 20%
S	± 10%	± 20%
I	± 15%	≤ 60ms
G	± 15%	± 20%
Other protection	± 15%	± 20%

Currents	[A]	L1, L2, L3, Ne, Ig
Voltages	[V]	U12, U23, U31
Sampling rate	[Hz]	1200-2400-4800-9600
Maximum recording duration	[s]	16
Recording stop delay	[s]	0-10s
Number of registers	[no]	2 independent

Information on trip and opening data: after a fault without auxiliary supply		Parameters
Type of protection tripped		eg. L, S, I, G, UV, OV
Fault values per phase	[A/V/Hz w/ VAR]	eg. I1, I2, I3, neutral for S protection V12, V23, V32 for UV protection
Time-stamping		Date, time and progressive number

Maintenance indicators		Parameters
Information on last 30 trips		Type of protection, fault values and time-stamping
Information on last 200 events		Type of event, time-stamping
Number of mechanical operations ⁽¹⁾	[no]	Can be associated to alarm
Total number of trips	[no]	
Total operating time	[h]	
Wear of contacts	[%]	Prealarm >80% Alarm = 100%
Date of maintenance operations performed		Last
Indication of maintenance operation needed		
Circuit-breaker I.D.		Type of circuit-breaker, assigned device name, serial number

Self-diagnosis		Parameters
Check of continuity of internal connections		Alarm due to disconnection: rating plug, sensors, trip coil
Failure of circuit-breaker to open (ANSI 50BF)		Alarm following non-tripping of protection functions
Temperature (OT)		Prealarm and alarm for abnormal temperature

(1) with auxiliary supply present

Advanced functionalities

- 62-63 Advanced features**
- 64-65 Ekip G generator protection trip unit**
- 66-67 Zone selectivity for Tmax T/ML**
- 68-69 Logic zone selectivity for Emax 2/ML**
- 70-70 Load shedding**

Advanced features

A modern ship's operational ability is fully dependent on its onboard electrical infrastructure. Over the years, the growth in the number of electrically powered subsystems on a typical naval vessel has made this infrastructure ever more complex and extensive, and has led to a steady increase in power requirements.

ABB provides the first smart circuit-breaker that combine advanced protection, programmable logic, full connectivity, and comprehensive energy management in all-in-one revolutionary device. ML circuit breaker integrates the functions of Interface Protection System and Interface Device in order to check the Main Grid conditions and disconnect the User's plant whenever grid voltage and frequency are out of the ranges prescribed by the connection standard. ML circuit breaker and its adaptive protections recognize the network change and automatically set new thresholds to guarantee protection and coordination in on-grid and off-grid conditions. Emax 2/ML is more than a circuit breaker as traditionally defined, compactness and high reliability from pre-tested functions makes Emax 2/ML highly suitable for applications in ships and marine vessels.

Emax 2/ML is an all-in-one innovative concept, in fact it is the first intelligent circuit breaker designed to protect, connect and optimize low-voltage microgrid applications. Accessories (modules) are added to the breaker to achieve all the additional functions needed. Besides the advanced functionalities described on the following page, Emax 2 integrates in a single device the following function:
Synchro reclosing,
Automatic Transfer Switch,
Watchdog.

For further detail please refer to your local ABB referent.

Ekip G generator protection trip unit

ABB SACE ML family, with the new Ekip G generator protection trip unit, offers an effective and reliable solution designed for the protection of low voltage generators.

Ekip G is the new generator protection release, which has all the protection embedded and it can monitor all the key critical parameters for connecting the generator to the system. These functions, generally provided by multifunction independent relays, are now integrated into SACE ML circuit breaker to guarantee a solution that is easy to install, compact, and reliable.

The generator is one of the most delicate part of the ship's electrical system. The protections, especially those that safeguard this machine from the most heavy failures, are often redundant. Hence the protection system for a generator is complex and complicated to be calibrated and to be managed. The protections available on Ekip G are individually activated and cover a wide spectrum of onboard electrical system. They also comply with the major international regulations and standard that provide guidance on the type of protections to be used to control generators, for example in the naval field.

Ekip G is compliant with the standard IEC 60034-1 "Rotating electrical machines - Part 1: Rating and performance" of with the IEEE C37.102 "Guide for AC Generator Protection" and IEEE 242 "Protection and Coordination of Industrial and Commercial Power Systems" or requirements requested by naval standard such RINA, DNV etc. Nevertheless, the most commonly required protections according also to the indications given in the above mentioned Standards and rules are summarized in the Table below.

Protections for synchronous generators	SnG < 500kVA	500kVA < SnG < 1500kVA	SnG > 1500kVA
Protections against loss of prime mover:			
- Active power directional protection	●	●	●
Protections against overloads:			
- Overload and overcurrent	●	●	●
- Current unbalance	●	●	●
Protections against failures of the excitation system:			
- Loss of field	-	●	●
- Under/Overvoltage	●	●	●
Protections against frequency variations:			
- Under/Overfrequency	●	●	●
Protection against network loss:			
- Rate of change of frequency	-	●	●
Protection against failures of the insulation system:			
- Stator earth fault	●	●	●

The Ekip G trip unit is able to:

- monitor the frequency and voltage inside the machine whereby tripping the machine main circuit breaker would isolate the generator from the rest of the plant without eliminating the fault;
- monitor the interaction conditions between the generator and the rest of the plant and provide for the separation and protection of the two systems when the conditions for interconnection are missing.

In both cases, programmable contacts are available that can be used to determine the shutdown of the generator, of the prime mover and of excitation. Ekip G, which is supplied as standard with Ekip Measuring Pro module, is comprised of current, frequency, voltage and power protection functions specific for generators.

The main features available are summarized in the table below.

Function	Description	ANSI	ABB
Synchrocheck	Control of adequate conditions for parallel connection	25	SC
Active overpower protection	Protection against active overpower supply	32OF	OP
Reactive overpower protection	Protection against reactive overpower supply	32OF	OQ
Reverse active power protection	Protection against active power absorption (reverse power)	32R	RP
Directional overcurrent protection	Protection against directional current	67	D
Active underpower protection	Protection against active underpower supply	32LF	UP
Loss of field or reverse reactive power	Protection against energizing anomalies, check of reactive power absorption protection	40/32R	RQ
Overload protection	Current protection against temperature rise	49	L
Instantaneous overcurrent protection	Instantaneous protection against phase overcurrents	50	I
Time-delayed overcurrent protection	Inverse/definite time protection against phase overcurrents	51 50TD	S
Earth fault protection	Inverse/definite and instantaneous time protection against earth overcurrents	51N 50NTD 50N; G; Gext 51G 50GTD	
Differential ground fault protection	Definite time protection against earth overcurrents in the generator windings	87N	Rc
Voltage controlled overcurrent protection	Protection against short circuit between phases with current threshold depending on voltage (controlled/restrained mode)	51V	S(V)
Residual overvoltage protection	Protection detecting loss of insulation in the machine	59N	RV
Undervoltage protection	Protection against voltage decrease	27	UV
Overvoltage protection	Protection against voltage increase	59	OV
Current unbalance protection	Protection against phase current unbalance	46	IU
Voltage unbalance protection	Protection against voltage unbalance and detection of rotation direction of phases	47	VU
Rate of change of frequency protection	Protection against rapid frequency variations	81R	Rocof
Overfrequency protection	Protection against frequency increase	81H	OF
Underfrequency protection	Protection against frequency reduction	81L	UF

Zone selectivity for Tmax T/ML

Using zone selectivity is possible to obtain selectivity considerably reducing the trip times and therefore the thermal stresses all the plant components are subjected to during the fault.

This type of selectivity, a development of time coordination, is made by means of logic connections between current measuring devices which, once the set threshold having been exceeded is detected, allow just the fault area to be identified and to have its power supply cut off. Each circuit-breaker which detects a fault communicates this to the one on the supply side sending a timed locking signal.

Thanks to extremely rapid detection and quenching of the short-circuit, the Tmax ML equipped with PR223EF or PR332/P trip unit are totally selective up to over 100 kA, and are not subject to any limits regarding the number of hierarchical levels of the installation.

All the protection functions can be programmed remotely using the dialogue function present on the trip unit or locally though the Ekip T&P which can be connected to a serial port on the front of the PR223EF.

The trip unit can be supplied from a 24 V DC auxiliary source or directly through the current transformers (self-supply). The electronic trip unit operation is guaranteed even in the case of single-phase load up to $0.18 \times I_{N}$.

In the presence of an auxiliary power supply:

- the device implements the L, S, EF and G protection functions; if the EF is disabled by the user, function I is enabled
- EFDP zone selectivity is implemented on the S, EF and G functions.

With the PR332/P trip unit it is now possible to extend the ZS zone selectivity function, already available on ABB SACE air circuit-breakers to the moulded-case circuit-breakers. The ZS zone selectivity, which is applicable to protection functions S and G, can be enabled in the case where the curve with fixed time is selected and the auxiliary power supply is present. ZS of selectivity is identical to that which can be obtained through the Emax 2 ML trip units. Tmax T7/ML circuit-breaker equipped with PR332/P can be connected directly without external accessories on the load side of a zone selectivity chain created through the other devices (Emax 2 ML trip units).

PR223EF**PR332/P**

Logic zone selectivity for Emax 2/ML

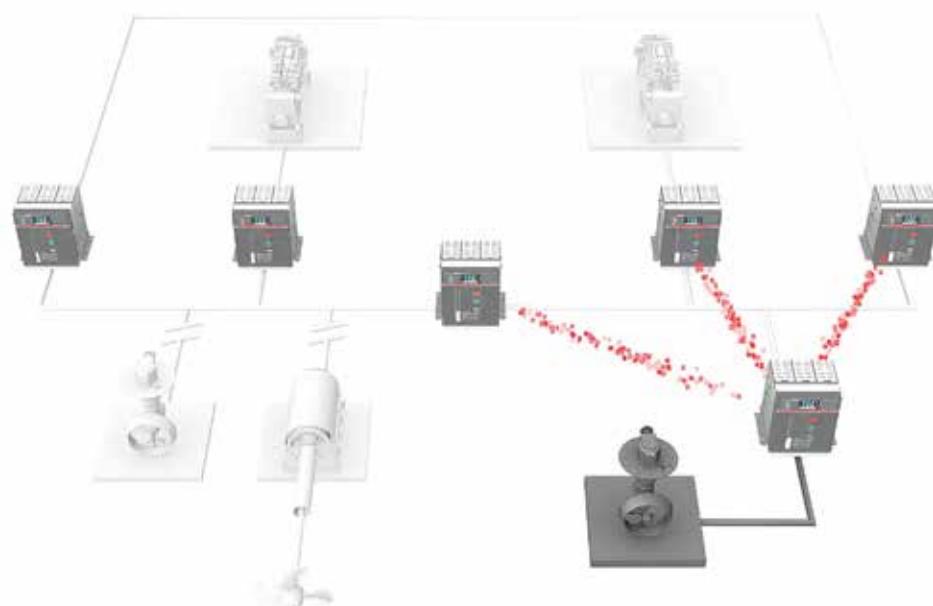

Emax 2/ML can manage the logic zone selectivity using the reliability, flexibility and efficiency of Ekip link, the ABB proprietary communication bus.

A major element of vessel power system design is protection against electrical faults. One very efficient method of handling faults is logic zone selectivity (or “discrimination”), which allows rapid fault isolation without users, other than those directly affected, seeing any effect. This approach can accurately isolate the fault branch by quickly opening the adjacent circuit breaker(s) and reduce the transitory on fault time and the electrical stresses.

Logic zone selectivity combines zone selectivity and directional protection. In contrast with traditional selectivity methods, which are based on time and/or current, the principle of logic zone selectivity is that the breaker that should trip for a fault sends a blocking signal to other breakers (upstreams) to prevent them from tripping. The principally impacted breaker can block other breakers from tripping, when appropriate. With Emax2, locking signal can be realized by traditional hardwire or by bus communication using Ekip Link.

Behind this scheme lies a logic that defines which breakers should and should not be tripped in certain situations. This logic is managed by Ekip Connect, the ABB software for the configuration of the electronic trip units.

Ekip Link, the ABB communication module for low voltage circuit breaker, communicate between circuit breaker using an internal ABB proprietary bus. The use of a proprietary bus guarantees very fast and predictable communication (independent of traffic on other buses)

Using ABB communication protocol, Ekip Link can:

- Create complex logic selectivity without using complex wiring
- Provide redundancy, using both Ekip link bus and standard wiring
- Provide diagnostics (configurable) to test the wiring selectivity

ABB's Emax 2 is the first low-voltage circuit breaker with fully integrated directional protection and zone directional selectivity functions. Using directional protection, there is also a possibility to set different delay times for the different directions.

Emax 2 air circuit breaker equipped with Ekip Link form the basis of a unique solution for low-voltage logical zone discrimination that has been designed to meet the most demanding requirements of reliability, flexibility and efficiency in vessels. This solution is easy to install, commission and test.

Load shedding

Emax 2/ML with embedded Load Shedding innovation creates the new benchmark for the service continuity in the naval electrical system.

ABB Emax 2, the all-in-one smart circuit breaker, embeds patented functions based on load shedding. These innovative algorithms manage the available resources maximizing the efficiency.

Load Shedding functions are adopted to protect Microgrids, as vessel power systems, during fault operation.

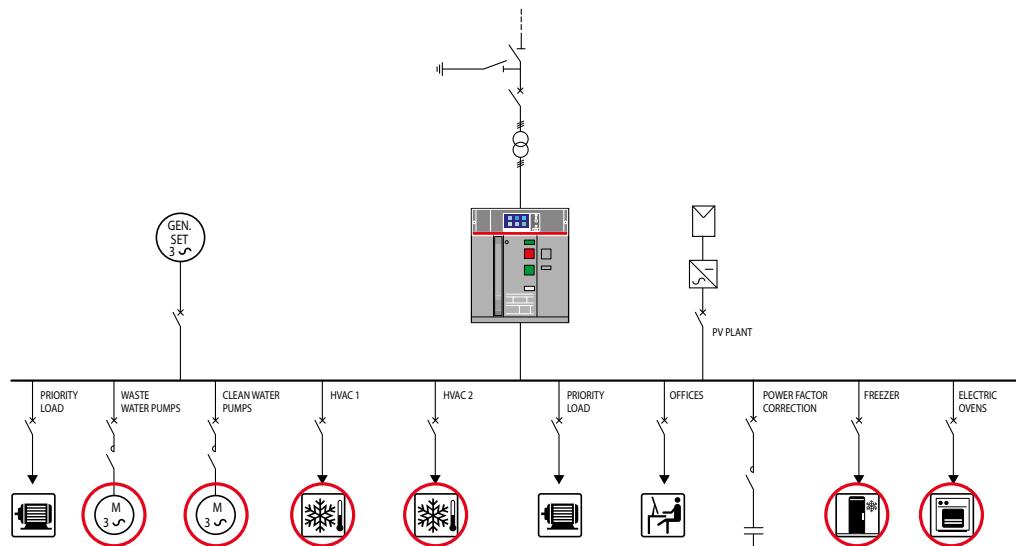

The load shedding function is able to switch from one source of energy to the other one, this happens when a failure occurs in one of the energy sources present in the power system. During this switch, the total amount of energy in the system falls down and not all loads can be fed. Load shedding, giving priority to the loads, maintains active only the primary loads while disconnecting the secondary. In this way the main functions are kept active even in case of fault. This advanced function for Microgrid can be managed by an automatic transfer switching (ATS) logic. Emax 2/ML can provide two different customizations of the load shedding which is mentioned below:

- **Basic Load Shedding**, simple logic able to recognize the Microgrid disconnection event and shed a group of non-priority loads thus ensuring a fast time response and power balance.
- **Adaptive Load Shedding**, the advanced algorithm available with Emax 2 as an enhancement of the basic version. The intelligent software embedded in the circuit breaker sheds very quickly the non-priority loads according to the Microgrid power consumption and frequency measurements.

Moreover, such software has a dedicated configuration for backup generation related to ATS and the software itself is even able to estimate the energy produced by the backup energy source. Emax 2/ML with embedded Load Shedding provides the following benefits:

- **Service continuity**: When a naval system has a problem in one of the main generators, there is a significant stress that turns off all the generators with consequent blackout. Load Shedding logic embedded in Emax 2 reduces the frequency drop that usually makes the local generation protection trip, maintaining the plant live.
- **Space saving**: Neither PLC nor external relays are needed as Emax 2 has embedded the intelligence to realize the load shedding logic, taking advantage of the internal current and voltage sensors for electrical parameter measurements. Significant space and material savings up to 50% in the power distribution switchgear for panel builders.
- **Ease of use**: Load shedding logic is generally set with high engineering skills and customization effort with devices as programmable logic controllers. While Emax 2 guarantees easy installation thanks to predefined templates and the user-friendly graphic interface in the SW commissioning tool.

For further information, please refer to the White Paper "Emax 2, all-in-one innovation – Load Shedding" (1SDC007119G0201)

Ordering examples

- Terminal kit codes (other than standard supply) for fixed part of withdrawable circuit-breaker.
The codes refer to 3 or 4 pieces (for mounting on

top or bottom terminals). To convert a complete circuit-breaker, 1 kit for upper terminals and 1 kit for lower terminals must be specified in the order.

Example no. 2

Emax E2.2 2000A 3 poles fixed part with spread upper vertical terminals (SVR) and rear bottom adjustable horizontal (HR) terminals (standard supply)

1SDA083381R1	E2.2/ML W FP Iu=2000 3p HR HR
1SDA074057R1	Kit SVR upper E2.2 Iu=2000 3pcs INST

- Ordering for Ekip modules.**
Ekip Supply module enables Ekip Com, Ekip Link, Ekip 2K, Ekip Syncrocheck cartridge modules to be installed.

In addition to Ekip Supply modules, up to 3 cartridge modules can be installed on E2.2, E4.2 and E6.2.

Example no. 3

Emax E4.2H 3 poles with modules: Ekip Supply, Ekip Com Modbus TCP, Ekip Signalling 2K-1, Ekip Com Modbus TCP Redundant and Ekip Signalling 4K

1SDA083492R1	E4.2H/ML 3200 Ekip Hi-Touch LSI 3p

Accessories

Service

—
Note:
Warranty periods are
measured from the
date the circuit breaker
leaves the factory.

Extended warranty

Size	Type	Code***
E1.2...E6.2	Warranty 2 years E1.2...E6.2*	1SDA082413R1
E2.2	Warranty 4 years E2.2**	1SDA082415R1
E4.2	Warranty 4 years E4.2**	1SDA082416R1
E6.2	Warranty 4 years E6.2**	1SDA082417R1
E2.2	Warranty 5 years E2.2**	1SDA082419R1
E4.2	Warranty 5 years E4.2**	1SDA082420R1
E6.2	Warranty 5 years E6.2**	1SDA082421R1

The registration in the Extended Warranty online tool is mandatory

* Free-of-charge with site details entered

** Warranty durations:

- 4 years when site details not entered into the Extended Warranty online tool
- 5 years when site details entered into the Extended Warranty online tool

*** Order only with the circuit breaker. Specify Registration code in the order to activate the warranty.

Test certificate
