Softstarters Type PSR, PSE, PST and PSTB

Power and productivity
for a better world™

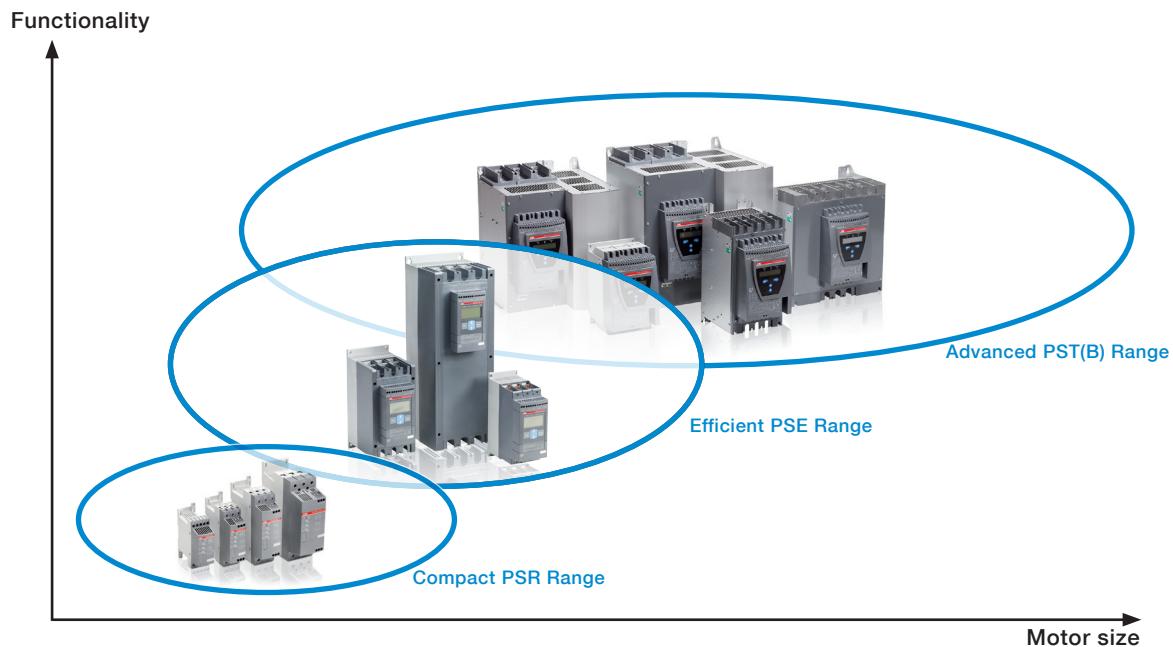

ABB

Efficient PSE Range – World's first compact softstarter with Torque control

The latest addition to the ABB softstarter family is the efficient PSE range. This softstarter has been equipped with all the most important features making it a very efficient choice. During the development process, great focus has been put into making sure that both the softstarter and the process are even more reliable. Further more, the softstarter has been equipped with built-in by-pass to reduce the wiring and a back-lit display to provide easy set-up and monitoring.

The complete range of Softstarters

The ABB softstarter portfolio now consists of 3 different ranges making it possible to find a suitable softstarter for almost all possible applications and motor sizes all the way up to 1800A. The softstarter family consists of the Compact PSR, the Efficient PSE and the Advanced PST(B) range.

Softstarters

From the moment the first electrical motors were developed, engineers have been searching for a way to avoid electrical and mechanical problems that usually occur when starting the motor. These problems include high inrush current and current spikes as well as excessive mechanical wear. One traditional way to avoid this is to use a star delta starter. This starting method in many applications is insufficient, as problems with current spikes and torque peaks will remain. In addition, it does not provide any way to perform a soft stop. A softstarter on the other hand will provide far better performance during the start and also the possibility to soft stop the motor.

ABB has been producing softstarters since the beginning of the 1980's. The valuable experience gained since the early 80's has been incorporated into the design of today's product ranges. Matching modern power electronics with smart circuitry and software, the ABB softstarters offer superior control of the current and voltage during motor start-up and stop, in addition to several state of the art design features.

The solution to both mechanical and electrical problems

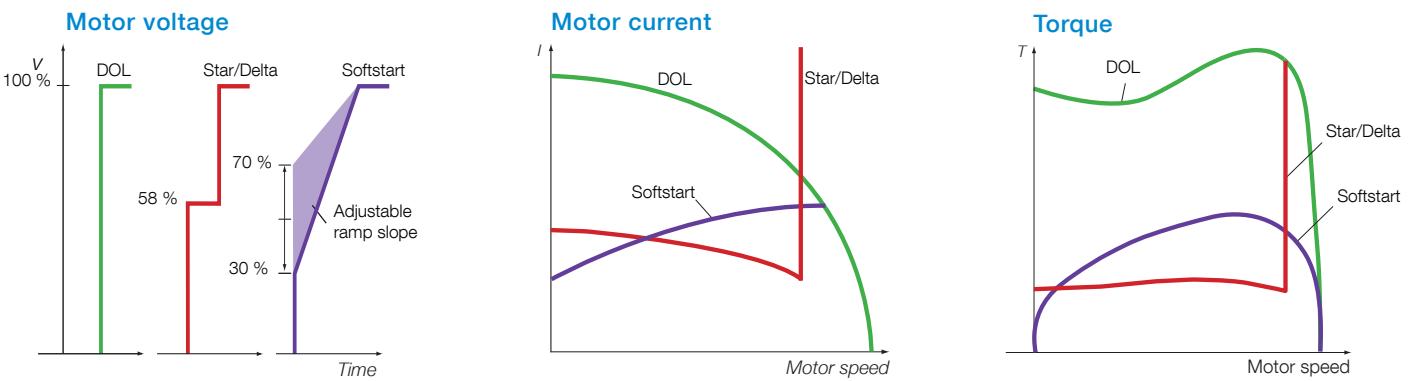

AC motors, "the workhorse of the industry", are used to drive fans, crushers, agitators, pumps, conveyors, etc. Depending on how it is installed, too often unnecessary and unwanted torque

and current peaks are an everyday reality in production plants all over the world, causing damage in several ways. Among them are:

- Electrical problems due to voltage and current transients arising from Direct-On-Line or Star-Delta starts. Such transients may overload the local supply network and cause unacceptable voltage variations that interfere with other electrical equipment connected to the network.
- Mechanical problems that address the entire drive chain, from motor to driven equipment, causing a big need for service and repair as well as unwanted down time.
- Operational problems, such as damage to products on conveyor belts.
- Water hammering and pressure surges in pipe systems when starting and stopping pumps.

The financial consequences are considerable; every technical problem and every breakdown costs money in terms of repairs as well as lost production.

The easy solution to all of these problems is to install an ABB Softstarter type PSR, PSE or PST(B). With ABB Softstarters, it is possible to start and stop smoothly while keeping mechanical and electrical stresses to a minimum.

Graphs showing the basic differences between direct-on-line starting (DOL), star-delta starting and soft starting in terms of the motor voltage (V), motor current (I) and motor torque (T).

Softstarters

ABB softstarters – The complete range

ABB offers three different ranges of softstarters to cover every customer need for solutions for motor sizes up to 1800 A. This page describes the main characteristics of the different softstarter ranges

PSR — The compact range

The PSR softstarter is the most compact of all the softstarter ranges, thereby making it possible to design compact starting equipment. The system concept with Manual Motor Starters and the PSR provides a far more compact starting solution than for instance a star delta starter.

The built-in by-pass reduces the energy loss and makes the connection easier. With only three potentiometers, the set-up couldn't be any easier. Still, the optimized ramping characteristics will ensure a very smooth start and stop for all applications.

PSE — The efficient range

The PSE softstarter is the world's first compact softstarter with both built-in electronic overload for motor protection and torque control for an excellent control of pumps. The compact design with the most important functionality integrated provides a very efficient starting solution.

The illuminated language neutral display and the four button keypad make it easy to take advantage of all the advanced functionality in the softstarter. The display will also provide all the necessary information both during ramping and continuous operation.

PST(B) — The advanced range

The PST(B) softstarter is the most advanced softstarter in the range with almost all imaginable functionality included. All the advanced protections for the motor, the softstarter and the load ensure a trouble free operation. Pre-warnings even allow problems to be detected before the motor needs to be stopped and thereby avoiding unnecessary downtime.

The torque control function has been developed and tested together with well known pump manufacturers to ensure the best possible start/stop of pumps without water hammering and pressure surges.

With the full text LCD display in your own language, pre-programmed application settings and event logging, it couldn't be easier to set-up and operate.

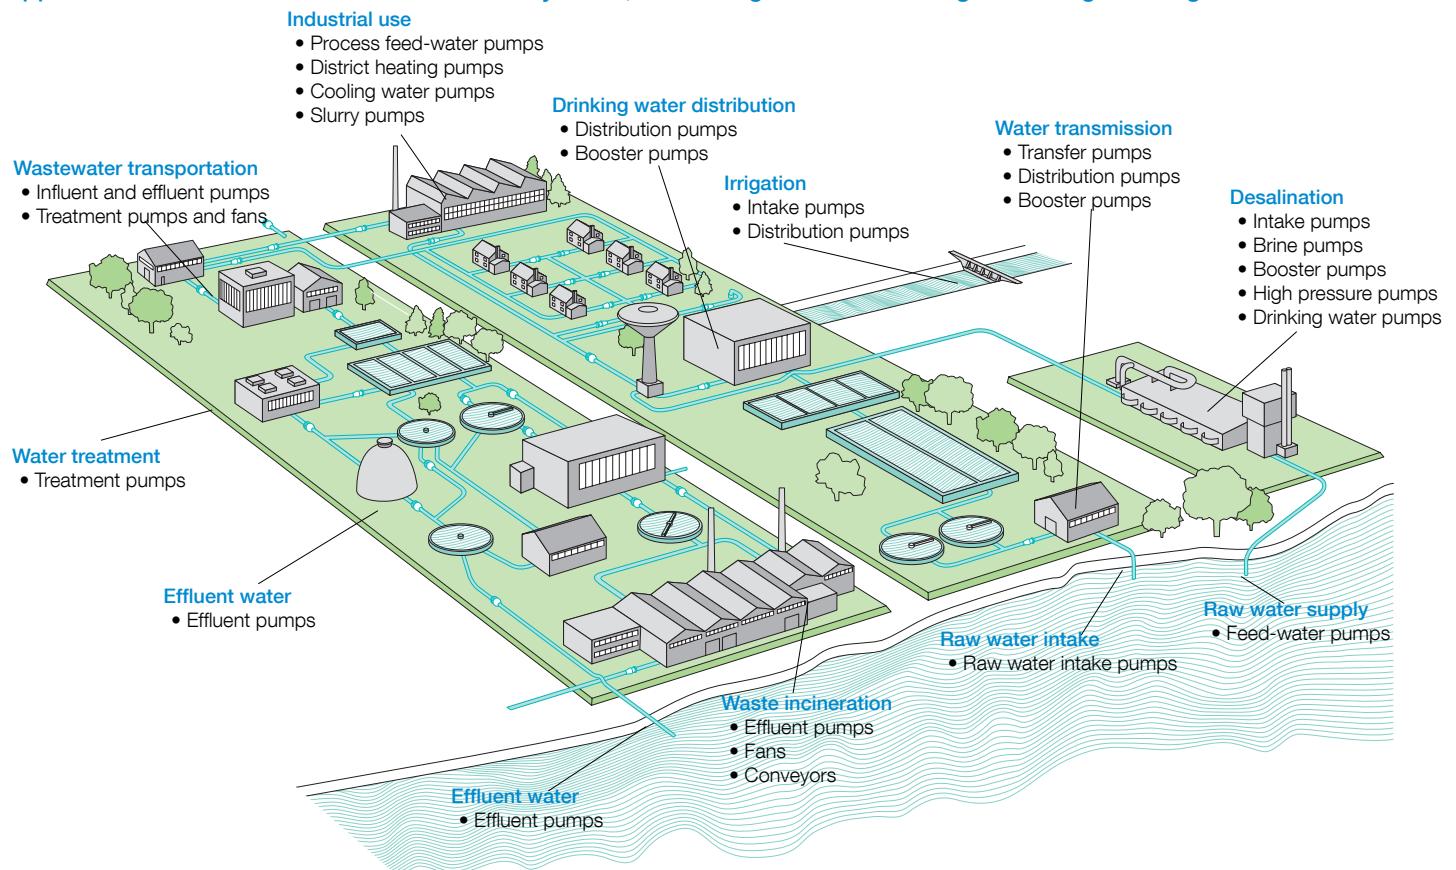

By using the ABB FieldBusPlug, you can decide at any time which bus protocol to use. The fieldbus system will allow you to set-up, control and monitor the softstarter.

Applications

Pumps

Water is the world's most important resource and water facilities can be found all over the world. Examples of water applications are freshwater and wastewater systems, circulating water for heating or cooling and irrigation.

Common questions:

- How to avoid voltage drops on the network when starting?
- ABB softstarter will reduce the starting current and thereby avoid the voltage drops.
- How to avoid water hammering when stopping?
- Use our softstarters equipped with an optimized stop ramp or even better with torque control.
- How to ensure high reliability in harsh environments?
- Use our softstarters equipped with coated circuit boards to better withstand those environments.
- How to protect my pumping equipment in the best possible way?
- Use ABB softstarters equipped with our special designed protections such as overload, underload, and locked rotor protection.

Applications

Fans

Common questions:

- How to avoid extended voltage drops due to long starting time?
- Use an ABB softstarter equipped with current limit to keep control of the starting current.
- How to extend the life of the driving belts?
- Our softstarters will reduce the mechanical stress during start, thus avoiding slipping belts.
- How to ensure the operation of the fan?
- A softstarter with underload protection will detect broken belts, making the operator immediately aware of the problem.

Compressors

Common questions:

- How to ensure a long life of the compressor?
- Using a softstarter for starting will reduce the accelerating torque, thereby minimizing the mechanical stress.
- How to build a compact compressor unit?
- Using a compact softstarter like PSR or PSE will allow a much more compact starting equipment than for instance a star delta starter.

Conveyor belts

Common questions:

- How to reduce the need for service and repair of the conveyor belt?
- A softstarter from ABB will cause minimal mechanical stress on the conveyor belt.
- How to avoid that the conveyor belt is running in the wrong direction?
- Use a softstarter with phase reversal protection.
- How to improve the efficiency of the conveyor belt?
- Using softstarters with high and low current warnings allows you to load on and off the conveyor belt.
- How to ensure a successful start in high inertia loads?
- A softstarter with kick start function will provide sufficient torque to be able to overcome the initial high friction from a temporarily jammed belt.

PSR – The compact range

Description

Product description

- Wide rated operational voltage 208 – 600 V
- Rated control supply voltage 24 V DC or 100 – 240 V AC
- Rated operational current 3 – 105 A
- Wide ambient temperature range, -25 to +60 °C (-13 to 140 °F)
- Built-in by-pass on all sizes, saving energy and reducing installation time
- Potentiometer settings
- Run signal relay on all devices
- TOR signal relay on PSR25 ... PSR105
- Optional fieldbus communication using Profibus, Modbus, Devicenet or CANopen
- DIN rail mounting on PSR3 ... PSR45
- Screw mounting on all sizes
- Connection kits for easy connection with ABB manual motor starters
- Sophisticated algorithm eliminating the DC-component and thereby providing excellent starting performance.

Settings

- ① Start = 1 ... 20 sec
Stop = 0 ... 20 sec - including the step down voltage.
- ② Step down = 2% reduction for each second increased stop ramp
Stop ramp 10 sec -> Step down 80% (20% reduction)
- ③ $U_{ini} = 40 \dots 70\%$ results in End voltage = 30 ... 60%

The PSR range is the most compact of all the ABB softstarter ranges, thereby making it possible to fit many devices into the same enclosure. The system concept with Manual Motor Starters provides a far more compact starting solution than for example a star delta starter.

Flexible mounting

PSR softstarters from 3 to 45 A are possible to mount on a din rail, ensuring quick and easy mounting. Naturally, all sizes can be screw mounted.

Few settings

The set-up of the PSR is easily done and confirmed using the three clearly marked potentiometers on the front.

Built-in by-pass for energy saving

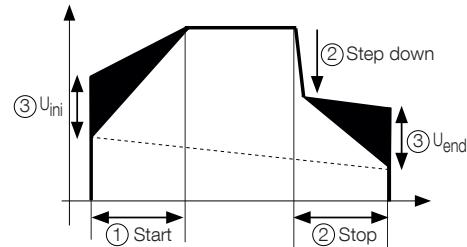

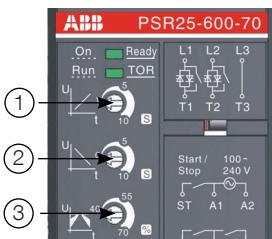

The built-in by-pass on all sizes does not only save energy; it will also ensure the most compact ABB softstarter design and reduce the installation time.

Suitable for stopping pumps

Even without using torque control, the PSR range is designed to reduce water hammering and will allow a superior stop compared to the direct stop resulting from a star delta starter or a DOL starter. See the special designed stop ramp with step down voltage below.

System concept with manual motor starters

All PSR softstarter sizes can easily be connected to the corresponding manual motor starters from ABB, using the special designed connection kits. This will both make the mounting and the connection easier and will provide a very compact starting solution containing short circuit and thermal protection, isolation function and softstarter - everything that you need.

For more optimized selections, or to use PSR for heavy duty starts, please use the softstarter selection program, prossoft.

PSE – The efficient range

Description

Product description

- Wide rated operational voltage 208 – 600 V AC
- Wide rated control supply voltage 100 – 250 V, 50/60 Hz
- Rated operational current 18 to 370 A
- Wide ambient temperature range, -25 to +60 °C (-13 to 140 °F)
- Coated circuit boards for reliable operation in harsh environment
- Built-in by-pass on all sizes, saving energy and reducing installation time
- User friendly HMI with illuminated language neutral display and four button keypad
- Optional external keypad, IP66
- Torque control for excellent control of pumps
- Current limit, adjustable between 1.5 – 7 × I_e
- Motor overload protection with classes 10A, 10, 20 and 30
- Motor underload protection to detect pumps running dry
- Locked rotor protection, detecting jammed pumps
- Kick start to start jammed pumps or conveyor belts
- Analog output showing operational current, 4 – 20 mA
- Optional fieldbus communication using Profibus, Modbus, Devicenet or CANopen
- Sophisticated algorithm eliminating the DC-component and thereby providing excellent starting performance.

The PSE softstarter range is the world's first compact softstarters with Torque Control. This makes the PSE range an excellent choice for pumping application where water hammering normally is a big problem. With its compact design and advanced functionality, the PSE is also a very efficient solution for other common applications such as compressors and fans.

Torque control

The most important function when stopping pumps is torque control. Since the PSE softstarter is optimized for controlling pumps, this feature is a must.

Built-in by-pass for energy saving

Using the built-in by-pass after reaching full voltage will greatly reduce the power loss and thereby save energy. In the PSE softstarter range, the by-pass is built-in on all sizes, which will give the most compact starting solution and reduce the need for wiring during installation.

Coated circuit boards

All circuit boards in the new PSE softstarter have a protective coating to ensure a reliable operation even in tough environments like wastewater plants, where corrosive gases and acids may exist.

Motor protection

The PSE softstarter is equipped with built-in electronic overload protection, protecting the motor from overheating. Since no additional overload device is needed, our efficient design saves both space, installation time, and ultimately money.

Analog output

The analog output terminals can be connected to an analog current meter to show the current during operation and thereby eliminating the need for an additional current transformer. The analog output signal can also be used as an analog input to a PLC.

Display and keypad

The set-up of the PSE softstarter is done by using the four button keypad and the illuminated display, providing a quick and easy set-up. While operating, the display will also provide important status information such as current and voltage.

External keypad

As an option the PSE softstarter can be equipped with an external keypad for easy set-up and monitoring of the unit without opening the enclosure door. The keypad can also be used to copy parameters between different softstarters.

PSE – The efficient range

Description

The PSE Softstarter can be selected according to the rated motor power in normal duty applications like pumps, compressors, elevators, escalators, short conveyor belts and bow thrusters. See page 18.

For heavy duty applications like centrifugal fans, crushers, mixers, mills, stirrers and long conveyor belts, select a softstarter from page 19. The softstarter selection tool prosoft can also be used for a more optimized selection.

Settings

- Green ready LED
Flashing - Supply available
Steady - Main available
 - Green run LED
Flashing - Ramping up/down
Steady - TOR
 - Yellow protection LED
 - Red fault LED
 - Back-lit display
 - User friendly keypad
Similar as for PST(B)
-
- Four digits showing values and messages
- Icon's for showing functions. Language neutral

¹⁾ According to CSA-C22.2 No. 60947-4-1-07, type 1 coordination requires that, under short-circuit conditions, the contactor or starter shall cause no danger to persons or installation and may not be suitable for further service without repair and replacement of parts.

²⁾ Minimum enclosure size used for short circuit current rating test. Enclosure that has two latching points minimum. For use in pollution degree 2 environment.

How to select correct size

By using the guide here, you can quickly select a suitable softstarter for the most common applications. If a more precise selection is required, you can use prosoft, a selection software available at www.abb.com/lowvoltage

Quick guide for selection	
Normal start Class 10	Heavy duty start class 30
Ordering - see page 18	Ordering - see page 19
Typical applications	
<ul style="list-style-type: none"> • Bow thruster • Centrifugal pump • Compressor • Conveyor belt (short) • Elevator • Escalator 	
<ul style="list-style-type: none"> • Centrifugal fan • Crusher • Mixer • Conveyor belt (long) • Mill • Stirrer 	
If more than 10 starts/h Select one size larger than the standard selection

Overload capability, Overload Class	10	Signal indication LED's	
Ambient temperature		On / Ready	Green flashing / steady
During operation	-25 ... +60 °C (-13 to 140 °F) ²⁾	Run / TOR	Green flashing / steady
During storage	-40 ... +70 °C (-40 to 158 °F)	Protection	Yellow
Maximum Altitude	4000 m (13123 ft) ³⁾	Fault	Red
Degree of protection		Protections	
Main circuit	IP00	Electronic overload	Yes (Class 10A, 10, 20, 30)
Supply and Control circuit	IP20	Locked rotor protection	Yes
Main circuit		Underload protection	Yes
Built-in By-pass	Yes	Field bus connection	
Cooling system - Fan cooled (thermostat controlled)	Yes	Connection for	
HMI for settings		ABB FieldBusPlug	Yes (option)
Display	4 7-segments and icons. Illuminated	External keypad	
Keypad	2 selection keys and 2 navigation keys	Display LCD type	
Main settings		Ambient temperature	
Setting current	Size dependent	during operation	-25 ... +60 °C (-13 to 140 °F)
Ramp time during start	1-30 sec	during storage	-40 ... +70 °C (-40 to 158 °F)
Ramp time during stop	0-30 sec	Degree of protection	IP66 (cJLus type 4X indoor)
Initial / end voltage	30-70%		
Current limit	$1.5-7 \times I_e$		
Torque control for start	Yes / No		
Torque control for stop	Yes / No		
Kick start	Off, 30-100%		
Signal relays			
Number of signal relays	3		
K2	Run signal		
K3	TOR (By-pass) signal		
K1	Event signal		
Rated operational voltage U_e	250 V AC / 24 V DC ⁴⁾		
Rated thermal current I_{th}	3 A		
Rated operational current I_e at AC-15 ($U_e = 250$ V)	1.5 A		

¹⁾ Valid for 50 % on time and 50 % off time, with $3.5 \times I_e$ for 7 seconds. If other data is required, please contact your sales office

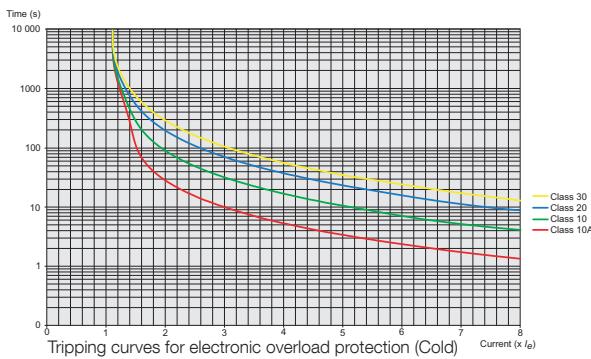

²⁾ Above 40 °C (104 °F) up to max. 60 °C (140 °F) reduce the rated current with 0.6 % per °C (0.33 % per °F).

³⁾ When used at high altitudes above 1000 meters (3281 ft) up to 4000 meters (13123 ft) you need to derate the rated current using the following formula.

$$[\% \text{ of } I_e = 100 - \frac{x - 1000}{150}] \quad x = \text{actual altitude for the softstarter in meter}$$

$$[\% \text{ of } I_e = 100 - \frac{x - 3280}{497}] \quad x = \text{actual altitude for the softstarter in feet}$$

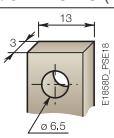

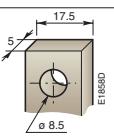

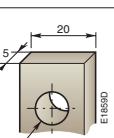

⁴⁾ A common voltage needs to be used for all 3 signal relays.

¹⁾ For the supply circuit use a maximum 6 A time-delay fuse or an MCB with type C characteristics.

PSE – The efficient range Notes

PST(B) – The advanced range

Description

Description

- Wide rated operational voltage 208 – 690 V AC
- Wide rated control supply voltage 100 – 250 V, 50/60 Hz
- Rated operational current 30 to 1050 A (Up to 1810 A inside delta)
- Wide ambient temperature range, 0 to +50 °C (32 to 122 °F)
- Both in line and inside delta connection
- Coated circuit boards available, for reliable operation even in harsh environments
- Full text display in 14 languages and 4 button keypad for easy set-up and operation
- Optional external keypad, IP66
- Built-in by-pass contactor on PSTB (from 370 A) for energy saving and easy installation
- Prepared for external by-pass on PST (30 – 300 A)
- Torque Control for excellent control of pumps
- Current limit, adjustable between 1.5 – 7 × I_e
- Fieldbus communication using Profibus, Modbus, Devicenet or CANopen
- Dual motor overload protection with classes 10A, 10, 20 and 30
- Adaptable motor underload protection to detect pumps running dry
- Adaptable locked rotor protection to detect jammed pumps
- PTC protection to protect the motor from overheating
- Adjustable kick start to start jammed pumps
- Programmable output signal relays
- Programmable pre-warning functions
- Event log with time stamp
- Analog output showing current, voltage, power factor etc.
0 – 10 V, 0 – 20 mA, 4 – 20 mA

The PST(B) softstarter is the most advanced softstarter in the ABB product portfolio and is equipped with almost all imaginable features. This makes the PST(B) ideal for almost every application.

Torque Control

The ABB torque control function is developed together with pump manufacturers to ensure the best possible pump stop, eliminating problems with water hammering and pressure surges.

By-pass for energy saving

By-passing the softstarter after reaching full voltage, will save energy and reduce the heat generation. The PST softstarters are equipped with extra terminals making the connection of an external by-pass contactor easier and allowing all protections to be active during by-pass. On the PSTB softstarters, an ABB AF-contactor is already built-in, ensuring a compact starting solution with minimal wiring during installation.

Advanced protections

The PST(B) softstarters are equipped with almost all protections imaginable for protecting the motor, the softstarter and the application. To offer more flexibility, all protections can be tailored to your specific needs.

Flexible analog output

The analog output terminals can be connected to an analog current meter to show the current during operation and thereby eliminating the need for an additional current transformer. The analog output signal can also be used as an analog input to a PLC.

Fieldbus communication

Using the ABB FieldBusPlug, all the most common fieldbus protocols are supported. Using the PLC system it is possible to set-up the softstarter, read status information and also to control the softstarter.

Display and keypad

The PST(B) softstarter is equipped with a full text display showing all information in clear text in your own language. To make it even easier to set-up, there are standard settings for many common applications, such as centrifugal pump. Selecting this will automatically provide all required settings including torque control when stopping.

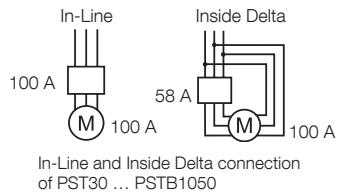

External keypad

As an option, the PST(B) softstarter can be equipped with an external keypad for easy set-up and monitoring of the unit without opening the enclosure door. The keypad can also be used to copy parameters between different softstarters.

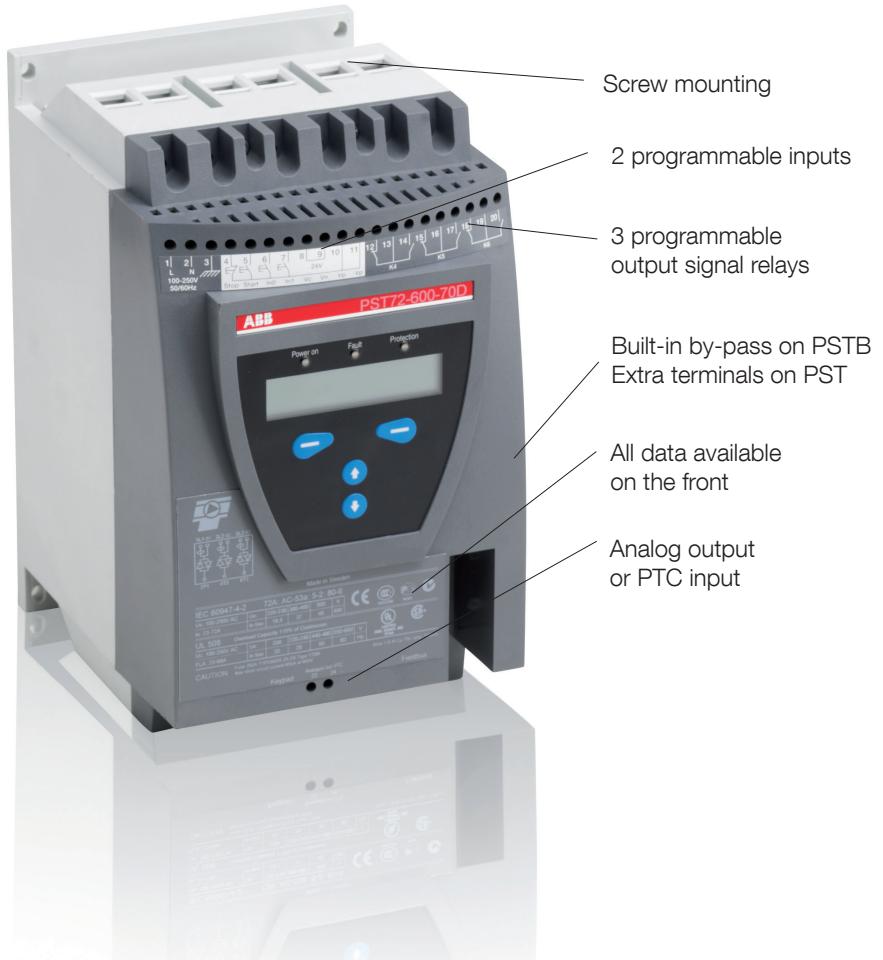

PST(B) – The advanced range

Description

The PST Softstarter can be selected according to the rated motor power in normal duty applications like pumps, compressors, elevators, escalators, short conveyor belts and bow thrusters. See page 28-29, For heavy duty applications like centrifugal fans, crushers, mixers, mills, stirrers and long conveyor belts, select a softstarter from page 30-31. The softstarter selection tool prosoft can also be used for a more optimized selection.

In-Line and Inside Delta connection of PST30 ... PSTB1050

- Green on LED
 - Yellow protection LED
 - Red fault LED
- Full text display in 14 languages
- User friendly keypad
- Pre set application settings

External keypad with same design as the fixed one

Using J fuses, type 1 coordination will be achieved	85 kA J type fuse protection										
175 % rating	45 A	50 A	70 A	90 A	100 A	110 A	125 A	175 A	225 A		
Max rating	90 A	110 A	150 A	175 A	225 A		250 A	350 A	400 A		
Min enclosure size (in) ²⁾	20 x 20 x 12							24 x 20 x 12			
Fusible disconnect switch for the above J fuses	Fusible disconnect switch										
	OS60	OS100		OS200				OS400			
The line contactor is not required for the softstarter itself but often used to open if OL trips	Line contactor										
	AF30	AF40		AF52	AF65	AF80	AF96	AF116	AF140		
Overload protection is used to protect the motor from over heating	Electronic overload relay										
	Built-in										
The bypass contactor will reduce the power loss of the softstarter. All softstarters can be operated without bypass	By-pass contactor (AC-1)										
	AF16	AF26	AF30	AF40		AF52	AF80	AF116			

¹⁾ According to CSA-C22.2 No. 60947-4-1-07, type 1 coordination requires that, under short-circuit conditions, the contactor or starter shall cause no danger to persons or installation and may not be suitable for further service without repair and replacement of parts.

²⁾ Minimum enclosure size used for short circuit current rating test. Enclosure that has two latching points minimum. For use in pollution degree 2 environment.

How to select correct size

By using the guide here, you can quickly select a suitable softstarter for the most common applications. If a more precise selection is required, you can use prosoft, a selection software available at www.abb.com/lowvoltage

Quick guide for selection	
Normal start Class 10	Heavy duty start class 30
Ordering - see page 28 - 29	Ordering - see page 30 - 31
Typical applications	
<ul style="list-style-type: none"> • Bow thruster • Compressor • Elevator • Centrifugal pump • Conveyor belt (short) • Escalator • Centrifugal fan • Crusher • Mixer • Conveyor belt (long) • Mill • Stirrer 	
<p>If more than 10 starts/h Select one size larger than the standard selection</p>

¹⁾ For the supply circuit use a maximum 6 A time-delay fuse or an MCB with type C characteristics.

²⁾ Calculated power loss at operational current (I_{op}) without by-pass.

$P_{tot} = 3 \times I_{op} + VA$ value

Example: PST 60 running at 52 A

$P_{tot} = 3 \times 52 + 5 = 161 \text{ W}$

³⁾ Max fuse rating independent of In-Line or Inside Delta connection. In Inside Delta connections of PST, the fuses can be placed outside of the delta. For PSTB the fuses shall be placed inside the delta. Contact ABB for more information.

Field Bus Communication

MODBUS TCP interface MTQ22-FBP

MTQ22

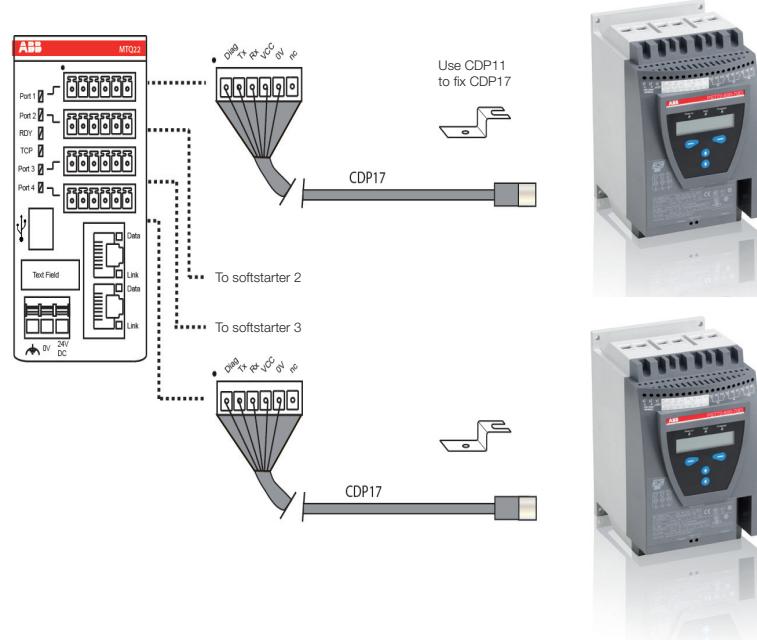

Modbus TCP interface

- Ethernet connectivity for up to four UMC100
- Modbus TCP protocol
- Supports all network topologies
 - Star
 - Bus
 - Ring with redundancy (MRP protocol)
- No special Ethernet connectors required in MCCs
- Easy to use in withdrawable applications

PDQ22-FBP

Profibus DP FieldBusPlug for 4 devices

PDQ22 is a member of the ABB FieldBusPlug family of bus connectors. It allows the connection of up to four devices to Profibus DP by just using one Profibus node access. This allows a cost efficient device integration for devices that are located physically nearby. PDQ22 supports DP-V0 and DP-V1. The degree of protection is IP66. There are separate diagnosis LEDs for bus and device status.

Note that the accessory PDQ22-FBP only works with the PSR and PSE and not with the PST(B) softstarter.

Configuration software

This cable and software can be used for set-up and commissioning of the softstarter as well as to keep back-up of the parameter settings.

Designation	Type	Part number	Packing piece	Weight kg (lb) 1 piece
USB to FBP interface cable	UTF21-FBP	1SAJ 929 400 R0002	1	
PDP22/PDQ22 Device Type Manager (DTM) incl. FDT/DTM frame application	PBDTM-FBP	1SAJ 924 012 R0003	1	

To connect the PST Softstarter to a Profibus DP fieldbus system...

you need specific software for PLC set-up, (GSD file) which is available at www.abb.com/lowvoltage on the Softstarter pages. Look under the documentation-link named Software. If you need help or advice, please contact your local ABB office.

PDP21 is replaced by PDP22.

Use PDP22 with the GSD-file Abb_082d.gsd regardless if the PLC is a DP/V0 or DP/V1.

Field Bus Communication

Profibus DP accessories, ordering details

Accessories for the Profibus DP Bus Connector

Profibus DP Round Cable for Bus Junctions

Ready-made bus cable with an M12 connector and an open cable end.

- Application on bus junctions such as e.g. Profibus DB couplers or devices with an integrated Profibus DB interface

PDF11-FBP.50

prosoft and marketing material

prosoft 5 - Softstarter selection tool

The selection of a softstarter can be done according to this catalog. This will work fine in the majority of cases but by using the softstarter selection tool prosoft, a more optimized selection will be achieved. Especially in extremely heavy duty applications with several minutes starting time, the use of prosoft is recommended.

When using prosoft, the selection is done in 3 steps, which can be seen as 3 different tabs in the program:

1. Input tab – Type in the general data and information about the motor and about the load. Try to use as accurate data as possible to get the most accurate results.
2. Calculation tab – Here it is possible to see how long the start will be depending on how high the current is. This tab will indicate which settings should be used and it might affect the selection.
3. The selection tab – Select which of the suggested softstarters to use. Here it is also possible to generate a report about the selection.

SoftstarterCare™ Service Engineer Tool for PSE

- Access all parameters on the HMI from a PC
- Access to additional parameters that can't be reach from the HMI
- Access to the PSE event log
- Access to PSE Softstarter status information
- Upgrade the Softstarter firmware

Marketing material available on www.abb.com/lowvoltage

The following material is a selection of all softstarter related material that is available on www.abb.com/lowvoltage. Just click on "Control Products", then "Softstarters".

- Product catalogs and brochures
- Certificates and approvals
- Circuit diagrams and application diagrams
- Dimension drawings (2D and 3D)
- Manuals
- eds- and gsd-files for fieldbus connection
- prosoft selection tool

A screenshot of the ABB website's 'Softstarters' product page. The page has a navigation bar with 'Overview', 'Data', and 'Contacts' tabs. The main content area features sections for 'ABB Softstarters - the complete range' (describing wide ranges of softstarters for various motor applications), 'ABB Softstarters - the complete range' (showing a grid of softstarter units categorized by type: PSR, PSS, PST/PSTB, Advanced, Compact, and Ampere), and 'Documentation and downloads' (listing various technical documents like brochures, catalogues, and certificates in PDF format).

Certifications and approvals

The table below shows the approvals and certifications for different softstarters.

For approvals and/or certificates not listed below, please contact your local ABB sales office.
