## Product release notification

### ADI 3M release to replace ADB 3M & ADB 3M Kit

We are happy to announce the launch of the new ADI 3M that will replace the ADB 3M & ADB 3M Kit. ADI 3M will be sold as a separate unit where standard ADI 300 connectors are added separately.

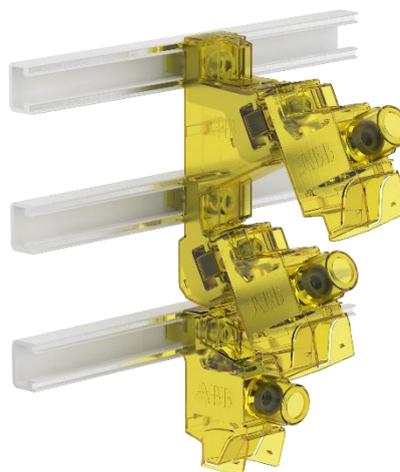

- The old ADB 3M was tested for 500A. The new ADI 3M is now tested for rated operational current of 630A, which releases the full potential from ADI 300.
- When using the old ADB 3M the nuts from AD 300 had to be removed. With ADI 3M the ADI 300 connector can be directly installed without any modification, which makes installation easier and quicker.
- ADI 3M has a transparent design that goes in line with the rest of the Kabeldon fusegear and connectors. The transparency also makes the connections to busbar visible and clear.

The ADI 3M will be available for orders from manufacturing unit ABB Alingsås at 2020-12-01.
