

Millenium

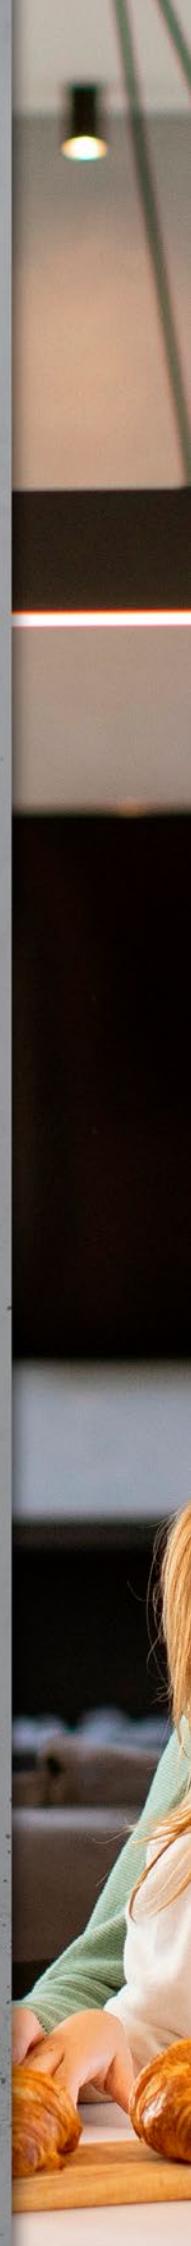

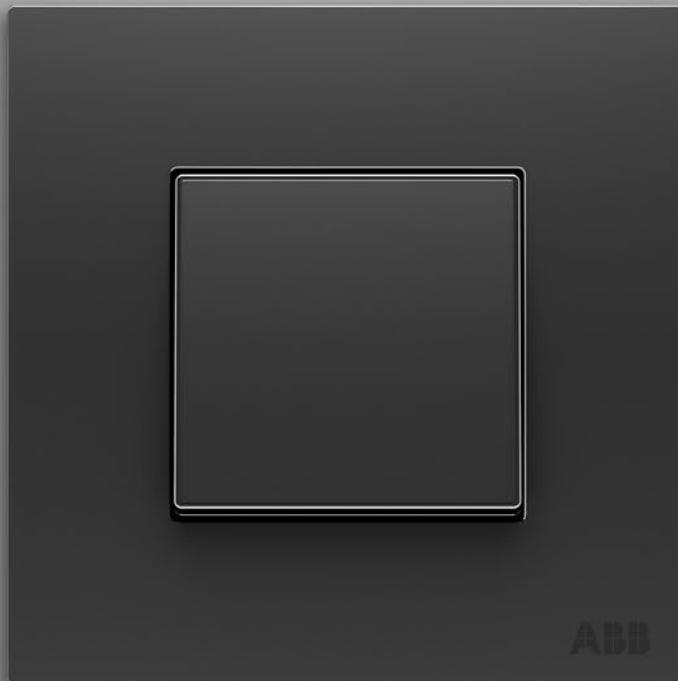

An element of sophistication

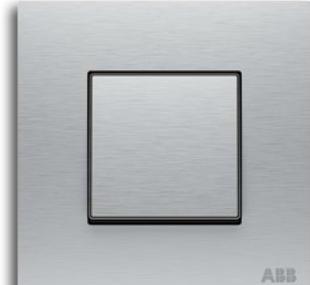

- ABB's signature range includes additional functions such as ABB-free@home® Wireless and the new USB chargers.
- Slim design, only 4 mm height of the cover frames.
- Two different rocker sizes: Premium and Standard for the light switches.
- Including two glass colors, black and white, and the recently launched Dune Sand and Mocha Brown new colors.

Find exactly what you are looking for.

The Millenium series offers control, functionality and convenience that will always fit the desired look and feel of the building.

Millenium new colors

The touch of style

Today more than ever, both at home and when we visit a hotel, we need spaces that provide a sense of safety and comfort. The two new colors Mocha Brown and Dune Sand are inspired by natural elements such as coffee beans, earth or sand to bring a warm feeling to the interior design of contemporary spaces.

Access control: the right choice for hotels applications

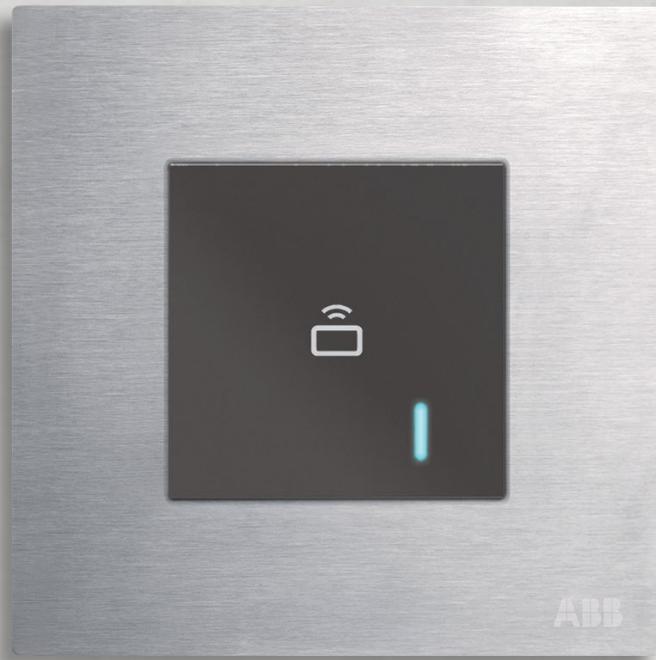

ABB's access control KNX-based solutions are perfectly adaptable not only to the needs of hotel industry operators, but also to the hospitality sector in general (apartment hotels, B&Bs, holiday apartments, and resorts).

Advantages

ABB access control is based on MIFARE transponder technology, exploiting its flexibility and security:

- Simplified and centralized management of all hotel functions from the front desk via the supervision software.
- Energy efficiency and cost savings (activation of the room's electrical devices only when occupied by the guest).
- Safety, thanks to room access via transponder card.
- Additional guest services integrated, managing access to every hotel common areas.

- 01 Transponder reader
- 02 Transponder holder
- 03 Set of 10 MIFARE transponder cards
- 04 MiniMAC 4.1 software

Sustainability and maximum respect for the planet

Nowadays it is not enough to simply design on the basis of aesthetics. The responsibility of manufacturers towards the environment means that they have to think about ecological designs.

At ABB we are convinced that the intelligent use of technology makes sustainability and maximum respect for the planet possible. So our products care for both people and the world around them.

These are some of the environmental improvements offered by Millenium:

- Millenium light signals are based on LED technology, leading to a saving in energy consumption of 50%, and extending their life to up to 10 years.
- Recyclable packaging, optimised to reduce raw material consumption.
- Optimization of Millenium's design, production and distribution process in order to reduce the impact in the environment.
- All our products comply with ROHS.

Millenium range has been designed following the requirements of norm ISO 14006 Environmental management systems / guidelines for incorporating Ecodesign certificate.

Applications

Millenium is based on a combinable concept which creates a very comprehensive range, suitable for any type of needs. This makes it the ideal collection for all types of homes, hotels, offices, shops, etc.

Homes

Its simple and minimalist design integrates in any type of architecture, regardless of the decoration. It provides a wealth of features and value, thanks to its wide range of functions and benefits. Millenium is the perfect match to improve living space.

Hotels

Millenium is specially suitable for Hotel projects thanks to its modern design, fashion materials and functionalities that provide high comfort level to the hotel guests. Its ABB i-bus® KNX, ABB-free@home®, access control, sound system and more functions make a special contribution to the Guest Room System in the daily management of the hotel, achieving energy savings and high tech comfort.

Commercials

The Millenium collection offers elegance and distinction to commercial spaces designed for different purposes; restaurants, coffee shops, stores, offices, airports, etc.

Features and benefits

Innovation, design and technology
Made in Spain

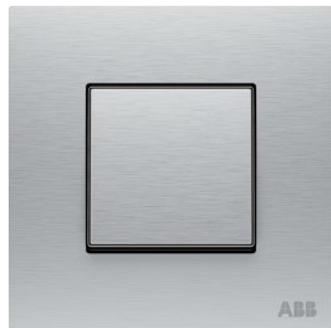

Millenium's design and functionality convert into numerous technical and installation advantages

Modern and contemporary 4 finishes made in real stainless steel material AISI 304 and 2 finishes made in glass to complete the elegant finishes of Millenium: Stainless Steel, Silk Black, Antique Gold, and Matt Gold, White Glass and Black Glass.

Designed by the famous European designer Josep LLuscá.

Slim line design, only 4 mm high with straight and square lines at the forefront. Rocker with attractive chrome profile that gives a distinctive glance.

First British Standard range with wide rocker and metal finish. Screwless front plate ultra slim design.

ABB warranty policy for Millenium collection:

- 10 years for mechanical switches and socket outlets
- 1 year for electronic devices

Large variety of sockets outlets, equipped with shutters for increased safety. Single and double pole, round pin, universal socket outlet, references with and without led indicator, 13 A and 15 A. All equipped with child protection safety shutter system.

ABB

Control your LED lamps redefining the use of light and using only a 50% of the energy of conventional lamps. Comfortable light control in a trice. Press the rotary knob and dim the light darker or brighter as required. The technology of the LED dimmers is based on transistors, avoiding humming noise.

Easy to install, simple and adaptable, it allows the use of bigger screws helping installation in any situation and place. Additionally, strong centered bridles allow to absorb differences in uneven walls up to 2 mm height in order to keep the installation perfect under any circumstances.

First British Standard range of wiring accessories with Ecodesign Certificate. Millenium has been designed from its conception to reduce the environmental impact throughout the product life cycle from design, production, operation, distribution and product recall.

Millenium offers a complete solution for any commercial project and especially for hotels, including within its range of wiring accessories not only special conventional solutions for hotels (DND/MUR switch, card switch, electronic thermostat, etc) but also VDI connectors, USB charger, ABB i-bus® KNX, ABB-free@home®, access control and sound systems.

Features and benefits

Full range of ABB i-bus® KNX, ABB-free@home® sensors, innovative, intuitive and visually elegant. Millenium gives answer to the future by providing comfort, safety, and energy saving.

Millenium collection is a grid type system enabling combination of colours and products of different dimension and functionality. The three type of switch dimensions together with the ABB i-bus® KNX, ABB-free@home® sensors and other functions, have to be composed with the required frame in order to have the right assortment of functionality and design. In ABB i-bus® KNX sensors we have the possibility to adjoin to the frame the special metal mounting plate that allows to reduce the height so as to maintain the ultra slim line for KNX functionalities.

Millenium - Modular System (AMD)

The modular system of Millenium (AMD) is a clever solution to allow users to combine different functions, frames and colors.

The functions can be combined with specific frames in order to complete the installation.

The table showing the full set of frames can be found at the end of the chapter.

Rotary/push dimmer LED AMD60344-AN

1.- Introduction

1. Product to be wired in accordance with wiring diagram.
2. Short circuit and overload will damage product.
3. In case of inductance load, take inductance power loss into account.
4. Please read the installation guide carefully before installation.
5. Electrical installation must be carried out by a qualified electrician in accordance with the accepted wiring practice and relevant regulations.

Disconnect the power during installation.

4.- Operation

Millenium

Rotary/push dimmer AMD60244-AN

1.- Technical Data

Electrical Characteristics - Power Supply: 230 V~ ; 50 Hz

- **Minimum Power:** 60 W / VA

- **Maximum Power:** 500 W incandescent lamps
500 VA halogen lamps with electronic transformer.
400 VA halogen lamps with ferromagnetic transformer.

- Room temperature for operation: 0 to 30 °C.

Operating Characteristics

- LED indicator pilot **Detecting the Type of Load**

- After wiring the device to the mains voltage, the regulator assesses the characteristics of the load connected.

Overload

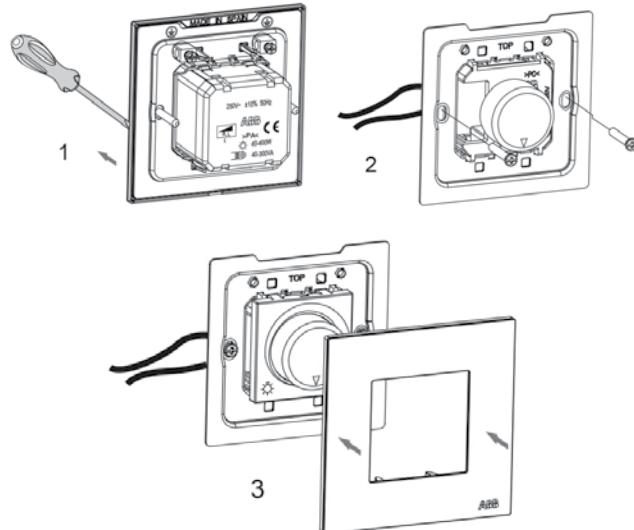

- If the device overloads above the maximum permitted nominal power, or if the operating temperature exceeds the maximum, the regulator will automatically stop working as a safety measure.

Short Circuit

In case of short circuit, the device will stop working as a safety measure.

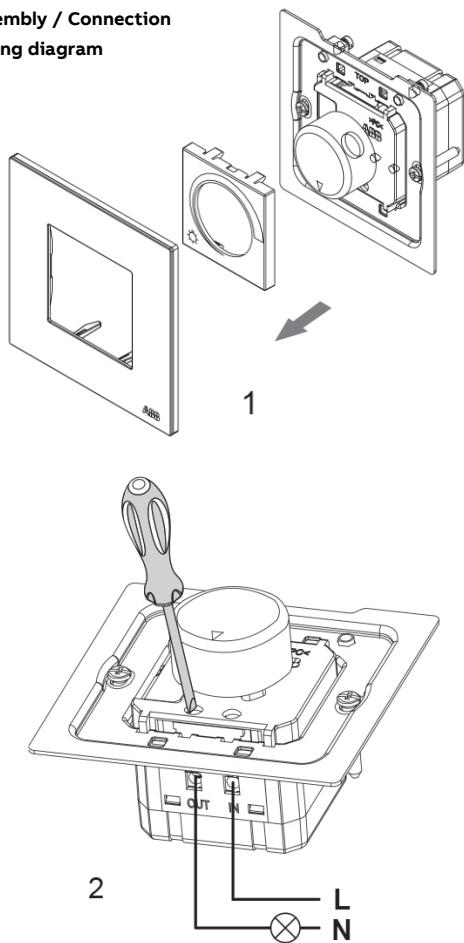

Note: Disconnect the device from the power supply if you are making changes to the load.

Rotary dimmer for fluorescent AMD60944-AN

1.- Technical Data

Power Supply: 230 V~ ; 50 Hz

- **Nominal power:** 700 VA

- **Load type:** Dimmable electronic ballast with 1-10V control input.

2.- Assembly/Connection

2.1.- Connection

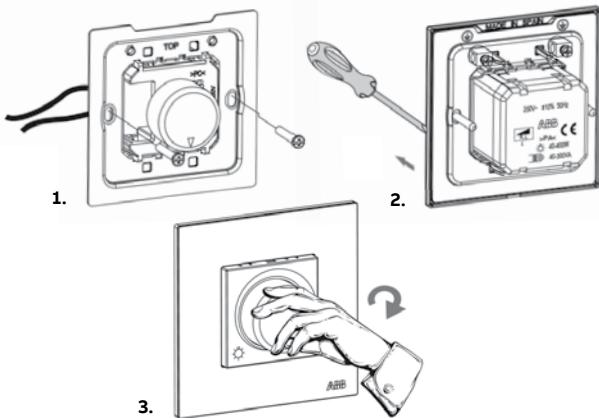

Follow the steps below to install the mechanism:

1. Connect the device according to the connection schemes.

Figure 2 and Figure 3.

2. Assemble the device on the flush mounting box.

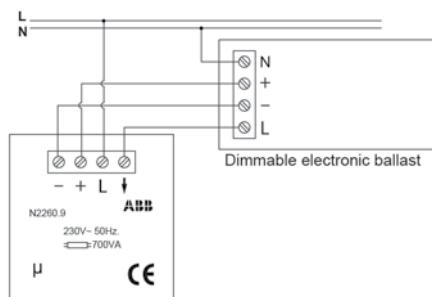

3. Then, place the plate.

Important: Disconnect the power supply when installing.

2.2.- Connection

The fluorescent lighting dimmer AMD60944-AN may be connected to dimmable electronic ballasts with a control input of 1-10 V as shown in Figure 2:

The maximum charge to be connected to the control terminals +/- should not exceed 50 mA.

See technical specifications of the dimmable electronic ballast to be installed.

Electronic ballasts generate a very high instantaneous peak current at connection, therefore it is recommended not to connect more than 6 ballasts to the AMD60944-AN fluorescence regulator.

In installations where it is required to connect more than 6 electronic ballasts to the same regulator mechanism, it is recommended to use a contactor to protect the mechanism contacts. See Figure 3.

3.- Operation button turns in the clockwise direction

If the charge is disconnected, i.e. the rotatory button is completely turned counter-clockwise, when turning right the charge will turn on (a "click" will be heard) and the intensity level will increase as we turn the button in the clockwise direction.

If the charge is at a given point of regulation, the charge intensity will increase as we turn the button in that direction.

If we turn the button completely in the clockwise direction, this will stop in a limit, which will coincide with the maximum regulation intensity level.

Operation button turns in the counter-clockwise direction

Intensity level will reduce as we turn the button in the counter-clockwise direction.

If we turn the button completely in the counter-clockwise direction, a "click" will be heard and the button will stop in a limit, the charge will be disconnected.

	VI. HALOGEN 12V	-	4 - 250 W	
	VII. INCANDESCEN.	-	4 - 250 W	

Types of load supported (see table 1)

Leading-edge dimmable loads:

- I. LED lamps at 230V/127V type L
- II. LED lamps at 12V with electronic transformer
- III. Halogen lamps at 12V with electronic transformer

Trailing-edge dimmable loads (recommended):

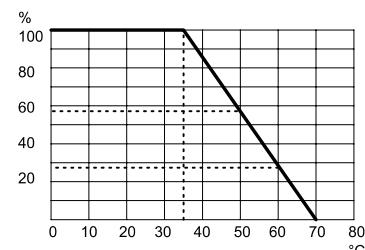

- IV. LED lamps at 230V/127V type C
- V. LED lamps at 12V with electronic transformer
- VI. Halogen lamps at 12V with electronic transformer

Traditional loads:

- VII. Incandescent and halogen lamps.

Technical data

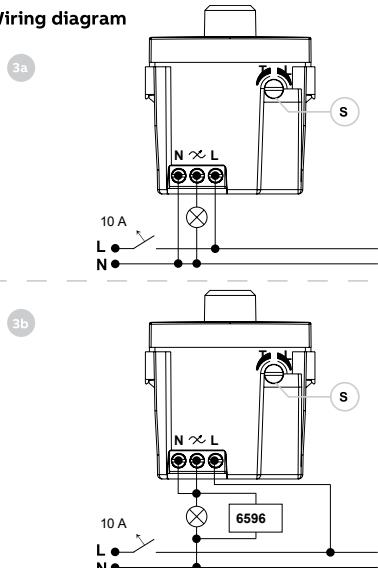

Nominal input voltage	(see tables 1)
Nominal input frequency	50 / 60Hz
Operating temperature	-5°C... +35°C
Maximum power supported:	(see tables 1 and 2)
Load type selector	Yes
Off position	Yes
Possible extension for ON/OFF	No
Connection wires	2 o 3
Short-circuit & overload protection	Yes
Temperature protection	Yes
IP protection	IP20
Safety standard	IEC 60669-2-1

Performance

The dimmer's nominal power will decrease according to ambient temperature in line with the graph. If 2 regulators are installed adjacent, reduce max. power to 50%. If 3 adjacent regulators are installed, reduce max. power to 25%.

2. Wiring diagram

3. Connection

3 WIRES (recommended):

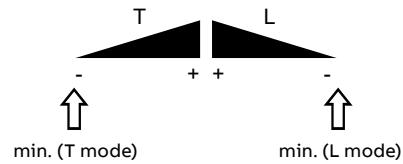

Figure '3a' shows an example of a 3-wire connection.

2 WIRES:

Figure '3b' shows an example of a 2-wire connection. This connection is subject to load compatibility, and correct functioning in all cases cannot be guaranteed (see note above). The minimum load installed must exceed 14W and it must be complemented with a 6596 compensation filter in parallel.

4. Set-up

1. Check the voltage is disconnected.
2. Configure the dimmer functioning mode using the adjustment dial, according to the type of load (see table 1)
3. Place the arrow at the bottom end (-) of the selector dial 'S'
4. Connect all wires through the rear terminals.
5. Make sure that the wires are correctly installed and free of potential short-circuits.
6. Restore the general power supply.
7. Switch on the lamps by turning the dimmer switch.
8. Adjust the minimum threshold by placing the arrow of the selector dial 'S' at the lowest point at which the lamps emit light without flashing.
9. Insert the mechanism in the recess box.

Make sure that the proper functioning mode has been configured (L or T) according to the type of load. Otherwise, the dimmer and the lamp could be damaged.

Note

Given the heterogeneity of the lamps and manufacturers in the market, some LED lamps may not be compatible with the dimmer resulting in persistent flashing problems. To avoid these problems, we recommend using the lamps of recognised manufacturers, avoiding the mixture of models and types whenever this is possible.

Bluetooth sound module with amplifier AMD68444

1. Technical Data

Power Supply:

230 V~ / 127 V~; ±15%; 50–60 Hz

Bluetooth®:

Bluetooth® v2.1 2.4GHz IEEE 802.15.1
Maximum reach from the ceiling module 9368.1
to user's Bluetooth® device: 10 m.

3 audio inputs:

Bluetooth, AUX (front), TV (rear)

Maximum power consumption: 7W

Consumption stand-by: 0.2 W

Min input signal level AUX / TV: 500 mV RMS

Input impedance: 10 kOhm

Amplifier power:

2 + 2 W <1% distortion (16 Ω)

Speaker impedance:

8–16 Ohm

2. Connection

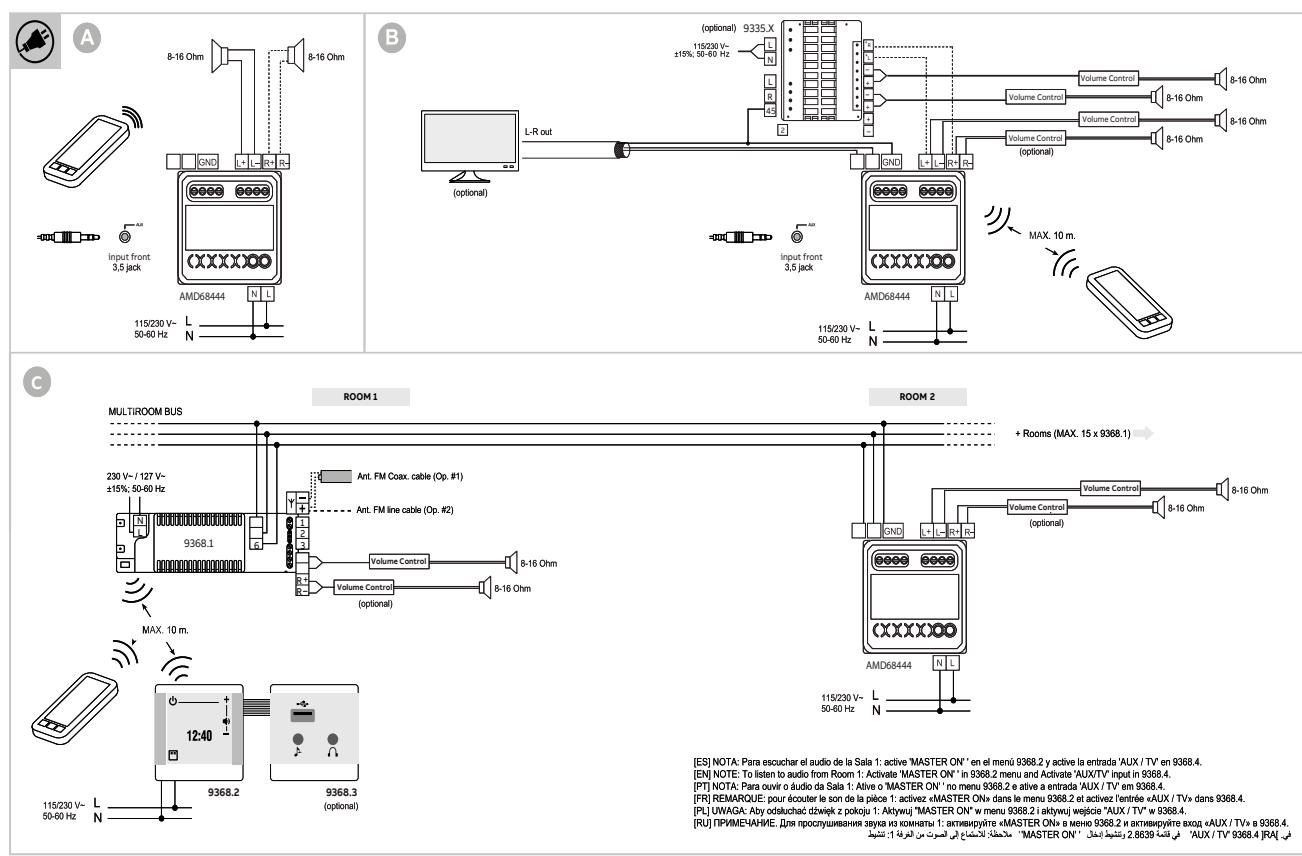

Basic: input from jack connector (front) or via Bluetooth®.

Output: amplified signal via R-L terminals (rear).

Complete: input from jack connector (front), via Bluetooth® or rear terminals (LIN-RIN) to connect TV audio.

Output: amplified signal via R-L terminals (rear) to feed speakers

(min. impedance: 8 – 16 Ohm) or external amplifier (ref. 9335.X) for higher power output.

2.- Connection

(through modules AMD68144 and AMD68244-AN)

3.- Functioning

ACTIVATION

When you connect the module 9368.3 through the modules 9368, 9368.7 y 9368.2, you may enter in the MENUS pressing the keys **MENU** and select the options USB, INPUT o BLUETOOTH to listen to their music.

- USB

The USB socket is designed for connecting the memory devices that do not consume more than mA a 5 V=. This way, all the MP3 and WAV files that you will encounter in the menu will be reproduced. You may activate it by entering **MENU** and pressing the option USB.

- INPUT

The INPUT socket is activated when you enter the **MENU** and selecting the option INPUT. This socket enables the connection of any stereo line input from reproducers such as MP3, walkman®, discman, PC, tablets and mobile phones.

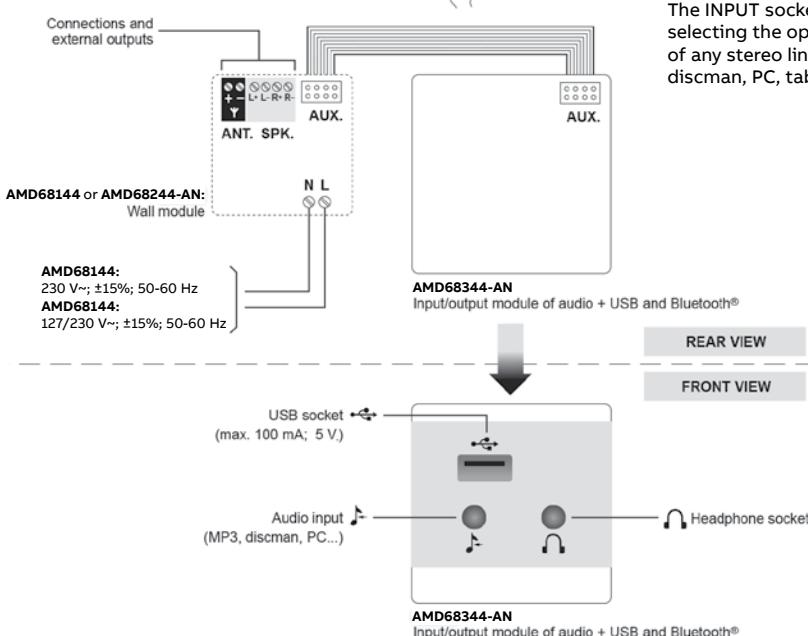

- BLUETOOTH

The bluetooth® signal is activated entering in **MENU** and selecting the option BLUETOOTH.

- HEADSET(PHONES)

The headphone socket is activated automatically by being connected to the PHONES socket. When it is connected, the speakers signal switches off and the last volume position of the headphones appears. For listening through the speakers again, disconnect the headphones socket.

* For more information on the functioning, please read the section **Connection to the module AMD68344-AN of auxiliary input USB and line + output of headphones** in the instructions of use of the modules AMD68144 and AMD68244-AN.

NOTE: Due to the radiofrequency nature of these devices, and in order to avoid possible interactions between them, it is highly recommended NOT TO INSTALL modules of the same reference at less than 1m. Thereby avoiding group assembly.

3.- Linking modules AMD68144 and AMD68244-AN

Important:

Modules AMD68144 and AMD68244-AN only work if both are interlinked by radio.

Module AMD68244-AN has to be connected by radio with ceiling module AMD68144, and only when this bond is created, can the system work efficiently.

Linking:

In order to connect two modules, make sure the connection diagram is similar to the one shown above, and that both modules are linked to the electricity network.

Then, access the rear of the ceiling module AMD68144 and press the internal key CONNECT with a clip or micro-screwdriver.

Once you have pressed the button you have got two minutes to go to the second module AMD68244-AN (the one you want to link with) and press simultaneously the keys **LINK** during two seconds.

When the two modules are associated, the screen should read "LINKED TO NEW EQUIPMENT".

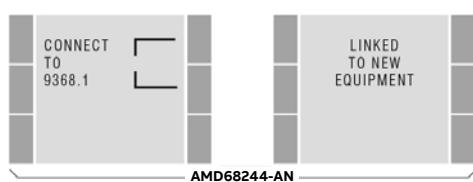

Note:

It is important that the process of connection between various equipments is done step-by-step, by matching each module AMD68144 to each AMD68244-AN selected.

If not, a faulty connection may occur.
