# ABB ACS150 micro drives

## Achieve high performance with maximum versatility in your application

### ABB micro drives

Take performance to the next level with the wide power range and functionality of the ACS150. The ACS150 variable frequency drive has an extensive list of programmable drive parameters that are used to achieve high performance with maximum versatility in many applications. The drive includes a variety of predefined I/O configuration macros, including ABB standard, 3-wire control, digital input control, PID control, hand/auto control and a PLC interface, for easy setup and commissioning. User defined macros can also be created.

ACS150 micro drives are compact with multiple mounting positions and options. The drive features an integrated control panel with LCD display and built-in speed potentiometer. Rapid programming and commissioning are possible using the onboard setup macros. The DrivePM (Drive Parameter Manager) software tool can be used to create, edit, and copy parameter sets using the MFDT-01 FlashDrop tool.

ACS150 micro drives are designed to be incorporated into a wide variety of machines, such as mixers, conveyors, fans, pumps, or anywhere a motor needs to run at variable speed. The ACS150 is ideal for panel builders and OEMs needing an easy-to-commission, cost-effective micro drive with flexible mounting options.

### Highlights

- Single and three phase input available
- 150% peak overload capacity
- Common height and depth across the product line, for flexible installation
- Easy access to power and I/O connections for rapid installation
- Options for input reactors, output filters and braking resistors
- UL listing includes use of ABB manual motor protectors for branch circuit protection instead of fuses
- NEMA 1 kits for standalone installation

Feature	Advantage	Benefit
Worldwide availability and service	Drives are available worldwide and permanently stocked in four regions. Dedicated global service and support provided by a network that is one of the widest in the industry.	Fast and reliable delivery with dedicated support to any country in the world.
User-friendly LCD control panel and integrated potentiometer	Clear alphanumeric display. Easy setup and use.	Time savings due to quick setup and simple configuration.
Flexible mounting alternatives	Wall or DIN rail mounting, sideways or side-by-side.	One drive type can be used in various designs, saving installation costs and time.
Integrated EMC filter	High electromagnetic compatibility.	Low EMC emissions in selected environments.
Built-in brake chopper as standard	No need for an external brake chopper.	Space savings, reduced installation cost.
FlashDrop tool	Faster and easier drive setup and commissioning for volume manufacturing and maintenance. The FlashDrop tool enables both downloading and uploading drive parameters.	Fast, safe and trouble-free parameter setting without the need to power-up the drive.
PID control	Varies the drive's performance according to the need of the application.	Enhances production output, stability and accuracy.
Coated boards	Board coating protects the electronics from hazards including static discharge and airborne contaminants, including moisture.	High reliability enables reduced maintenance the electronic components are protected.

---

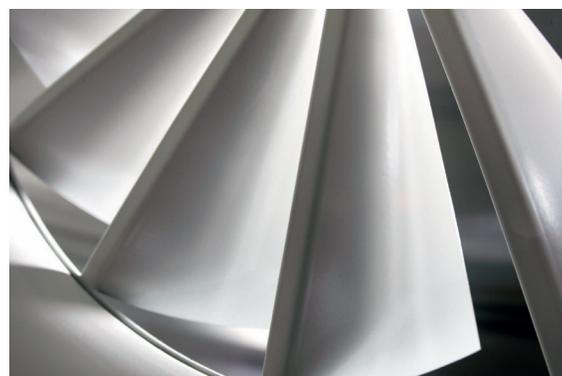

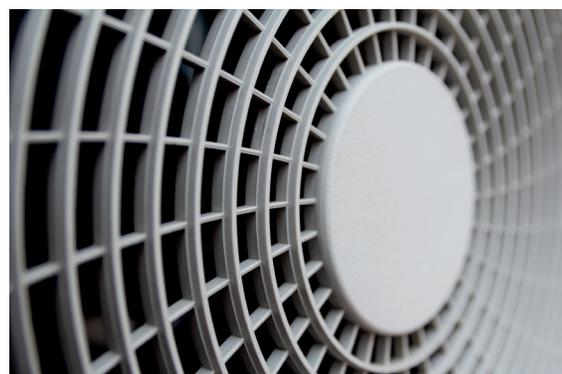

# Applications

**In mixing applications** the drive provides high starting torque which benefits the start of the mixing operation. The silent operation mode adjusts the switching frequency of the drive to a higher level after the high-torque start, resulting in lower audible noise. The FlashDrop tool provides a quick and safe way to configure multiple drives for identical mixer applications.

**In conveyors** the belt speed can be controlled using a drive and a motor. Production lines often have multiple stages, including conveyors, which need to be efficiently linked with each other to provide high production output. A drive provides smooth start and stop of the conveyor, thereby reducing mechanical stress and lowering maintenance costs.

**A heat pump system** consists of an indoor unit with fan and an outdoor unit with a compressor and a blower. The outdoor unit uses the compressor and the blower to dissipate the heat. The cooled air is blown indoors by fans located in the indoor unit. Drive allows the user to variably control the cooling power based on customer request. AC drives optimize systems' energy efficiency and smooths system operation.

**Fans** are used for process cooling and ventilation in industrial, commercial and domestic environments. Using a drive to control air flow enables energy savings compared to mechanical flow control methods. An ABB drive has integrated PID control which provides optimal air flow by adjusting the fan speed based on a given reference value.

# Ratings, types and dimensions

## Type designation

In column 4 on the right is the unique reference number that clearly identifies your drive by power rating and frame size. Once you have selected the type designation, the frame size (column 5) can be used to determine the drives dimensions, shown below.

## Voltages

ACS150 is available in two voltage ranges:

2 = 200 to 240 V

4 = 380 to 480 V

Insert either "2" or "4", depending on your chosen voltage, into the type designation shown on the page 7.

## Construction

"01X" and "03X" within the type designation varies depending on the drive phase and EMC filtering.

Choose below the one you need.

01 = 1-phase

03 = 3-phase

E = EMC filter connected, 50 Hz frequency

The European variant of the ACS150 will have an "E" in the type code indicating the EMC filter is connected with a metal grounding screw in the EMC port

U = EMC filter disconnected, 60 Hz frequency

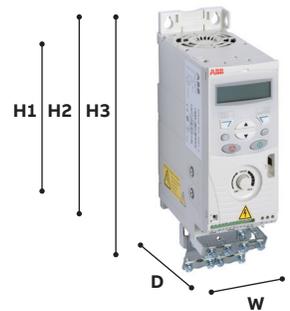

The standard configuration of the ACS150 for drives stocked in the U.S. will have a "U" in the type code, indicating there is a nylon screw in the "EMC" port to disconnect the filter. A metal screw is provided in the parts bag to replace the nylon screw and connect the EMC filter.

Mains connection	
<b>Voltage and power range</b>	1-phase, 200 to 240 V $\pm$ 10% 0.5 to 3 hp (0.37 to 2.2 kW) 3-phase, 200 to 240 V $\pm$ 10% 0.5 to 3 hp (0.37 to 2.2 kW) 3-phase, 380 to 480 V $\pm$ 10% 0.5 to 5 hp (0.37 to 4 kW)
<b>Frequency</b>	48 to 63 Hz
Motor connection	
<b>Voltage</b>	3-phase, from 0 to U <sub>supply</sub>
<b>Frequency</b>	0 to 500 Hz
<b>Continuous loading capability (constant torque at a max. ambient temperature of 40 °C)</b>	Rated output current I <sub>2N</sub>
<b>Overload capability (at a max. ambient temperature of 40 °C)</b>	At heavy duty use 1.5 x I <sub>2N</sub> for 1 minute every 10 minutes At start 1.8 x I <sub>2N</sub> for 2 s
<b>Switching frequency</b>	
<b>Default</b>	4 kHz
<b>Selectable</b>	4 to 16 kHz with 4 kHz steps
<b>Acceleration time</b>	0.1 to 1800 s
<b>Deceleration time</b>	0.1 to 1800 s
<b>Braking</b>	Built-in brake chopper as standard
<b>Motor control method</b>	Scalar U/f
Environmental limits	
<b>Ambient temperature</b>	-10 to 40 °C (14 to 104 °F), no frost allowed, 50 °C (122 °F) with 10% derating
<b>Altitude Output current</b>	Rated current available at 0 to 1000 m (0 to 3281 ft) reduced by 1% per 100 m (328 ft) over 1000 to 2000 m (3281 to 6562 ft)
<b>Relative humidity</b>	Lower than 95% (without condensation)
<b>Degree of protection</b>	IP20/Optional NEMA 1 enclosure
<b>Enclosure color</b>	NCS 1502-Y, RAL 9002, PMS 420 C
<b>Contamination levels</b>	IEC 721-3-3 No conductive dust allowed
<b>Transportation</b>	Class 1C2 (chemical gases) Class 1S2 (solid particles)
<b>Storage</b>	Class 2C2 (chemical gases) Class 2S2 (solid particles)
<b>Operation</b>	Class 3C2 (chemical gases) Class 3S2 (solid particles)

Power conditioning	
<b>AC input reactors</b>	External option. For reducing THD in partial loads and to comply with EN 61000-3-2.
<b>Dv/dt output filters</b>	External option. To achieve longer motor cables.
Programmable control connections	
<b>One analog input</b>	
Voltage signal	0 (2) to 10 V, R <sub>in</sub> > 312 k $\Omega$
Current signal	0 (4) to 20 mA, R <sub>in</sub> = 100 $\Omega$
Potentiometer reference value	10 V $\pm$ 1% max. 10 mA, R < 10 k $\Omega$
Resolution	0.10%
Accuracy	$\pm$ 2%
Auxiliary voltage	24 V DC $\pm$ 10%, max. 200 mA
<b>Five digital inputs</b>	12 to 24 V DC with internal or external supply, PNP and NPN, pulse train 0 to 16 kHz
<b>Input impedance</b>	2.4 k $\Omega$
<b>One relay output</b>	
Type	NO + NC
Maximum switching voltage	250 V AC/30 V DC
Maximum switching current	0.5 A/30 V DC; 5 A/230 V AC 2
Maximum continuous current	2 A rms
Product compliance	
Low voltage Directive 2006/95/EC with supplements	
Machinery Directive 2006/42/EC	
EMC Directive 2004/108/EC with supplements	
Quality assurance system ISO 9001	
Environmental system ISO 14001	
UL, cUL, CE, RCM and EAC approvals	
RoHS compliant	

# Control connections and interfaces

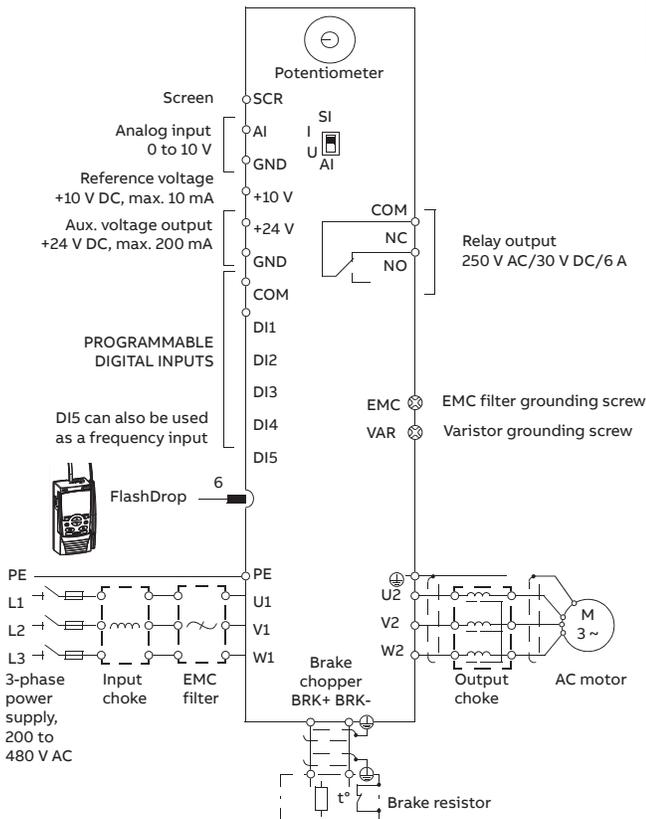

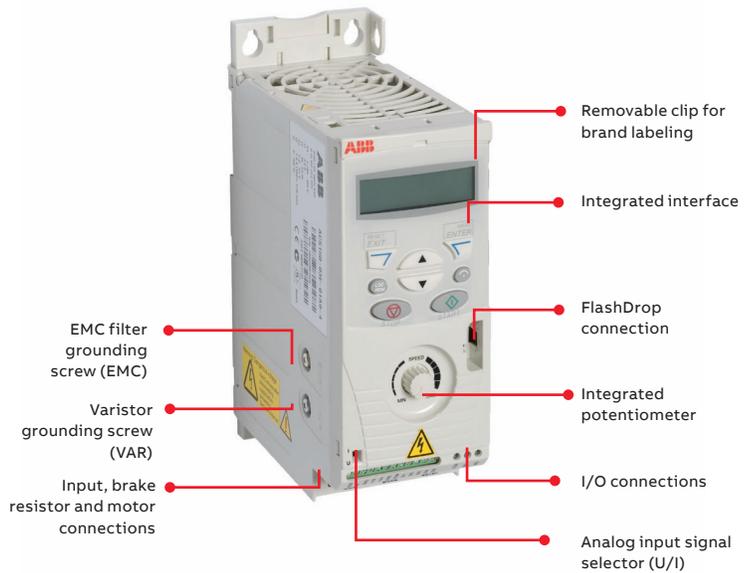

## Application macros

Application macros are preprogrammed parameter sets. When starting up the drive, the user typically selects one of the macros that is best suited for the application. The diagram below gives an overview of ACS150 control connections and shows the default I/O connections for the ABB standard macro.

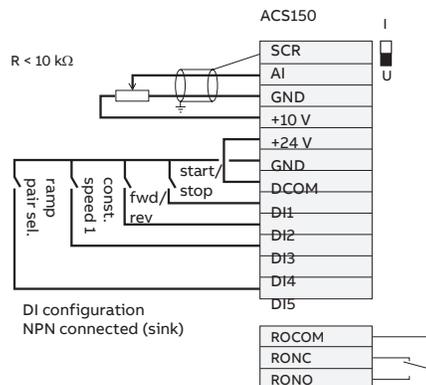

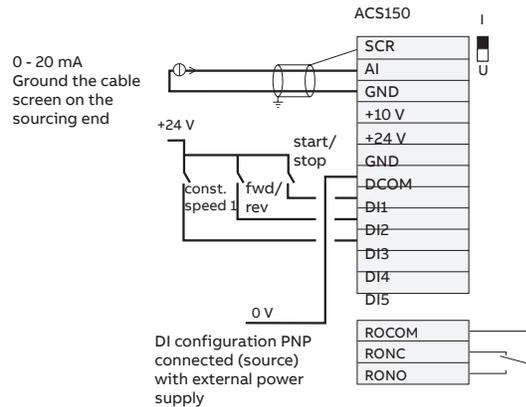

## ABB micro drives have six standard macros:

- ABB standard macro
- 3-wire macro
- Alternate macro
- Motor potentiometer macro
- Hand/auto macro
- PID control macro

In addition to the standard macros the user can create three user macros. The user macro allows the user to save the parameter settings for later use.

## Typical I/O connections

# Cooling

## Cooling

ACS150 is fitted with cooling fans as standard. The cooling air must be free from corrosive substances and must not be above the maximum ambient temperature of 40 °C (50 °C with derating). For more specific limits see the Technical data - Environmental limits in this catalog.

### Cooling air flow

Type designation	Frame size	Heat dissipation		Air flow	
		[W]	BTU/hr	m3/h	ft3/min

# Fuses and circuit protection

## Fuses or manual motor protectors for circuit protection

Standard fuses or manual motor protectors can be used with ACS150 drives for branch circuit protection.

Use the following table for selecting the correct fuse or protector for each drive.

## Manual motor protectors

ABB UL file E211945 Volume 1, Section 4 lists the ABB Type E manual motor protectors MS132 & S1-M3-25, MS165, MS495 as an alternate to UL classified fuses as a means of branch circuit protection. This is in accordance with the National Electrical Code (NEC).

When the correct ABB Type E manual motor protector is selected from the table and used for branch circuit protection the drive is suitable for use in a circuit capable of delivering not more than 65 kA RMS symmetrical amperes at the drive maximum rated voltage.

Drives with and without NEMA 1 enclosure kits are included in the UL file. The MMP selections in the table are also valid for drives having a NEMA 1 enclosure kit installed.

Type code	Frame	IEC fuses	UL fuses	Manual motor protectors	Input Amps	Minimum Enclosure Vol. <sup>5</sup>
		Fuse type gG* [A]	UL class T or CC (600V) [A]			
<b>1 Phase 200 to 240 V</b>						
ACS150-01U-02A4-2	R0	10	10	MS132-6.3 & S1-M3-25 <sup>3</sup>	6.1	1152
ACS150-01U-04A7-2	R1	16	20	MS165-16	11.4	1482
ACS150-01U-06A7-2	R1	20	25	MS165-20	16.1	1482
ACS150-01U-07A5-2	R2	25	30	MS165-20	16.8	1482
ACS150-01U-09A8-2	R2	35	35	MS165-25	21	1482
<b>3 Phase 200 to 240 V</b>						
ACS150-03U-02A4-2	R0	10	10	MS132-6.3 & S1-M3-25 <sup>3</sup>	4.3	1152
ACS150-03U-03A5-2	R0	10	10	MS132-6.3 & S1-M3-25 <sup>3</sup>	6.1	1152

ACS150-03U-07A3-4	R1	16	20	MS132-10 & S1-M3-25 <sup>3</sup>	9.7	1152
ACS150-03U-08A8-4	R1	20	25	MS165-16	11.3	1482

\*According to the IEC-60269 standard

<sup>1</sup> All manual motor protectors listed are Type E self-protected up to 65kA. See ABB publication 2CDC131085M0201 - Manual Motor Starters - North American Applications for complete technical data on ABB Type E manual motor protectors. In order for these manual motor protectors to be used for branch circuit protection, they must be UL listed Type E manual motor protectors, otherwise they can be used only as an At Motor Disconnect. "At Motor Disconnect" is a disconnect just ahead of the motor on the load side of the panel.

<sup>2</sup> Manual motor protectors may require adjusting the trip limit from the factory setting at or above the drive input Amps to avoid nuisance tripping. If the manual motor protector is set to the maximum current trip level and nuisance tripping is occurring, select the next size MMP. (MS132-10 is the highest size in the MS132 frame size to meet Type E at 65kA; next size up is MS165-16.)

<sup>3</sup> Requires use of the S1-M3-25 line side feeder terminal with the manual motor protector to meet Type E self-protection class.

<sup>4</sup> 480Y/277V delta systems only: Short-circuit protective devices with slash voltage ratings (e.g. 480Y/277 VAC) can be applied only in solidly grounded networks where the voltage from line-to-ground does not exceed the lower of the two ratings (e.g. 277 V AC), and the voltage from line-to-line does not exceed the higher of the two ratings (e.g. 480 V AC). The lower rating represents the device's interrupting capability per pole.

<sup>5</sup> Minimum enclosure volume is specified in the UL listing for R0 & R1 frame drives when applied with the ABB Type E MMP shown in the table. ABB IP20 micro drives are intended to be mounted in an enclosure unless a NEMA 1 kit is added.

For all drives, the enclosure must be sized to accommodate the specific thermal considerations of the application as well as provide free space for cooling.

See the applicable ABB User Manual for free space requirements.

To obtain the most current product documentation go to [www.abb.com](http://www.abb.com) and select Offerings/Low Voltage AC Drives to navigate to the complete User Manual for the appropriate drive.

# Options

## FlashDrop tool

FlashDrop is a powerful palm sized tool for fast and easy parameter selecting and setting. It gives the possibility to hide selected parameters to protect the machine. Only the parameters needed in the application are shown. The tool can copy parameters between two drives or between a PC and a drive. All the above can be done without a power connection to the drive – in fact, it is not even necessary to unpack the drive.

## DrivePM

DrivePM (Drive parameter manager) is a tool to create, edit and copy parameter sets for FlashDrop. For each parameter/group the user has a possibility to hide it, which means that the drive user does not see the parameter/group at all.

## DrivePM requirements

- Windows 2000/XP/Vista/Windows 7
- Free serial port from a PC

## FlashDrop package includes

- FlashDrop tool
- DrivePM software on a CD-rom
- User's manual in pdf-format on the previous CD-rom
- Cable for connection between the PC and FlashDrop
- Battery charger

## Protection class NEMA 1

The NEMA 1 kit includes a connection box for finger protection, conduit tube installation, and a hood for protection against dirt and dust.

## Brake resistors

ACS150 is delivered with an integrated brake chopper as standard. The brake resistor is selected using the table below. For more information about the selection of brake resistors, see the ACS150 user's manual.

# Braking resistors

## Brake chopper (transistor)

ACS150 drives include a built-in brake chopper as standard. No assembly of separate option kits need to be selected, no additional panel space is required, or additional installation time is needed to include a brake chopper. Brake resistors are selected using the following tables. Either compact CR type

resistors (for smaller drives) or standard enclosed resistor packages are available. For more information regarding the selection of the braking resistor and the limits of the built-in brake chopper, see the ACS150 User Manual.

### Brake resistor selection table

Single phase 200-240V applications, stopping duty

# Braking resistors

## CR Case Resistors Overview

Powerohm's Type CR resistors are manufactured with quality components for superior performance and increased life expectancy. Our case resistors feature a nickel-chromium wire helically wound, then placed inside a ceramic fixture and inserted into a corrosion resistant aluminum case. Each coil end is terminated to high temperature wire leads and encapsulated with a ceramic potting material. The result is a resistor element electrically isolated, but thermally bound to the outer case to allow the element heat to transfer to the metallic case and efficiently cool. The units are supplied with 18" wire leads, and the case is machined to include two mounting holes for easy installation.

## Electrical Ratings & Dimensions of Standard Size Case Resistors

Wattage	Dimensions (in)				
	A	B	C	D	E
100	6	1 - 1/2	3/4	5 - 1/2	3/4
150	9	1 - 1/2	3/4	8 - 1/2	3/4
200	6	3	1 - 1/2	5 - 1/2	1 - 1/2
300	9	3	1 - 1/2	8 - 1/2	1 - 1/2
400	12	3	1 - 1/2	11 - 1/2	1 - 1/2

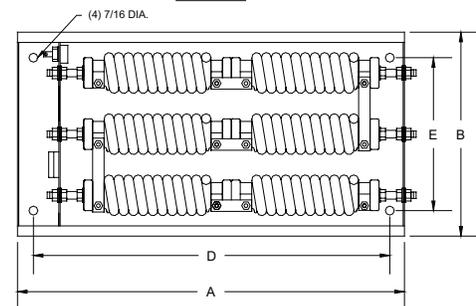

## GCE Enclosure Dimensions and Coil Options

Part No.	Max. No. WR Code	Max. No. SXR, VR or ER	Dimensions (in)				
			A	B	C	D	E
GCE1	1	(1) Size 2	12	5	5	10 - 1/2	---
GCE2	2	(2) Size 2	12	7	5	10 - 1/2	4 - 1/2
GCE3	3	(3) Size 2	12	10	5	10 - 1/2	7 - 1/2

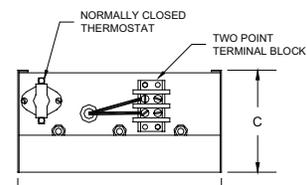

## GCE Resistors Overview

The type GCE enclosures are heavy gage screened enclosures featuring a solid bottom and a built-in wiring compartment separated from the resistor assembly. The resistors are factory wired to a terminal block mounted in this compartment using high temperature Teflon or silicone wire. The terminal compartment also houses a normally closed thermal switch used for detecting resistor temperature overloads. During installation, standard 90°C rated wire is routed into the compartment through the removable 1/2 inch conduit knockouts and connected to the factory wired terminal block.

Our standard unit includes a screened cover which is CNC punched to obtain maximum cooling and professional aesthetics. Mounting holes are located inside the enclosure and can be easily accessed by removing the cover. Resistor coils are interconnected using stainless steel bus bars, producing a corrosion resistant current path to withstand nearly any harsh industrial environment. The standard finish is galvanized, but an optional powder coated, aluminum or stainless steel finish is available upon request. As shown in the table below, the size of the enclosure will vary depending on the number of resistor coils required for your application. Units are available with louvered covers; add "-W" to the part number and note that the 'A' and 'B' dimensions will increase by an inch.

LEFT SIDE VIEW

# Input reactors

A separate order line and type designation is required for any of these external options.

## Input reactors

- Using an input reactor increases uptime, improves power factor, and increases drive lifetime by reducing heat. Drives are vulnerable to electrical distortion on the line. The addition of a KDR Reactor will reduce harmonic content, which reduces the total RMS current, thereby improving the total power factor. In most cases, the use of an external input reactor is recommended for use with an AC drive. Advantages of using an input reactor include:
  - Reduction of nuisance tripping caused by:
    - Transient voltages caused by capacitor switching
    - Line notching

- DC bus overvoltage tripping
- Inverter overcurrent and overvoltage
- Reduced nuisance tripping
- Additional benefits include:
  - Lowering injected percentage of harmonic current
  - Improving true power factor
  - Reducing cross-talk between drives
  - Adding impedance to drives with DC link chokes/reactors when more impedance is desired due to a relatively stiff source

## Features

Open, UL Type 1 and UL Type 3R construction - all are UL Listed.

Cable lugs are provided with the reactor or as a separate kit as noted in the tables.

All KDR resistors in sizes that match with ACS150 drives include lugs, no separate lug kits are require

# dv/dt Output filters

A separate order line and type designation is required for any of these external options.

## dv/dt output filters

V1k Output Filters provide motor protection by limiting voltage spikes to 1,000 volts, or below, for long motor cable applications. Greatly extends the life of the motor and cable for all applications up to 1000 feet. For multi-motor applications note that motor lead length is cumulative and the 1000 foot limit still applies. 30% reduction in common mode current enough.

## Available types

Open, UL Type 1 and UL Type 3R construction with connection terminals.

Note: The drives internal EMC filter must remain disconnected when using these filters. When applying these output filters the drive output frequency is limited to 60 Hz.

# A lifetime of peak performance

You're in control of every phase of the life of your drive. At the heart of drive services is a four-phase product life cycle management model. This model defines the services recommended and available throughout your drive's lifespan.

Now it's easy for you to see the exact service and maintenance available for your drives.

**ABB drives life cycle phases explained:**

Full range of life cycle services and support

Limited range of life cycle services and support

Replacement and end-of-life services

<b>Product</b>	Product is in active sales and manufacturing phase.	Serial production has ceased. Product may be available for plant extensions, as a spare part or for installed base renewal.	Product is no longer available.	Product is no longer available.
	<b>Services</b>	Full range of life cycle services is available. Product enhancements may be available through upgrade and retrofit solutions.	Limited range of life cycle services is available. Spare parts availability is limited to available stock.	Replacement and end-of-life services are available.

**Keeping you informed**

We notify you every step of the way using life cycle status statements and announcements.

The benefit for you is clear information about the status of your drives and the exact services available. It helps you plan the preferred service actions ahead of time and make sure that continuous support is always available.

**Step 1**

**Life Cycle Status Announcement**

Provides early information about the upcoming life cycle phase change and how it affects the availability of services.

**Step 2**

**Life Cycle Status Statement**

Provides information about the drive's current life cycle status, the availability of product and services, the life cycle plan, and recommended actions.
