

Country Environmental Policy

Environmental protection is one of ABB's highest business priorities. The top management is aware of its significant influence on the environment. Therefore the Environmental Policy was created as a consistent element of the business strategy. The Environmental Policy is based on the context of the organization and sets the scope for creating and reviewing the environmental objectives and ultimate values. ABB Czech republic is committed to follow and respects these principles:

- Provide all activities and services in line with legal and other requirements valid in the Environmental area.
- Continually improve the environmental management, support and create conditions to ensure the prevention of pollution.
- Developing and marketing products and systems which are resource efficient.
- Improve the processes at all divisions in order to minimize the environmental impact.
- Conduct all operations and services in an environmentally friendly way – the lowest emissions, airborne, soil and water release.
- Developing our manufacturing processes with focus on energy and Resource Efficiency.
- Manage and educate employees to behave in an environmentally responsible manner, in a way they understand which support and fully endorses the Environmental Policy.
- Promoting environmental responsibility along the value chain by encouraging suppliers, sub-contractors and customers to adopt international environmental standards.
- Practice open dialogue with interested parties including all subjects connected with the company's actions and environmental impact.
