

## 25 years of Azipod® propulsion Setting the propulsion trends for marine industry since 1990

Azipod propulsion kick-started a new era in ship propulsion. It has enabled bigger vessels and made vessel operations safer, more environmentally friendly and cost-effective. Now Azipod propulsion is an industry standard for cruise vessels, ice going vessels and many other ship types.

### 25 years young and still developing...

### The impact of Azipod propulsion – saves energy and our environment

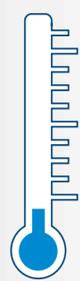

More than  
**700,000 tons**  
of saved fuel, equivalent to the  
cargo of seven 240-metre tankers

**12,000,000**  
operating hours. This is equivalent to  
**1,300 years** of operation experience

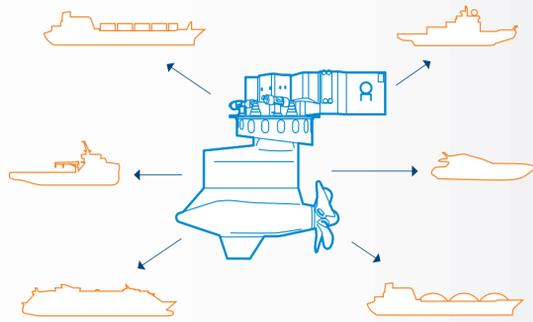

**-35 °C**

**+35 °C**

From demanding and harsh  
**ice conditions to warm  
tropical paradises,**  
the ships sail safely, reliably and comfortably

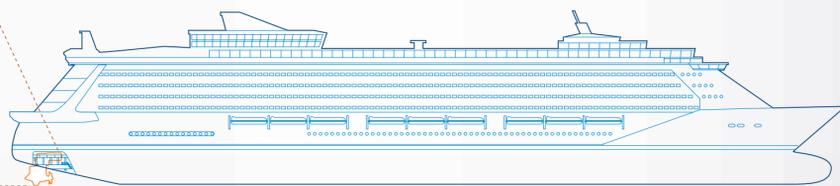

Azipod propulsion is used in more than  
**20 ship types**

### Smooth and precise sailing with Azipod propulsion onboard

**Big** when compared  
to a person

**Small** when compared to a cruise ship – Azipod propulsion  
gives excellent maneuverability and enables more space onboard
