Disabled toilet with KNX

- System could be equipped with several parallel calling buttons and could be connected with US/U2.2 to KNX. In this way several separate Disabled toilet alarms could be connected to a common panel
- KNX-system could be also used together with:
 - Occupied light system
 - Day center calling system
 - Panic alarm system
 - Leakage guard system

Signal system connection to KNX

Leak Guard

Leak Guard controls water using devices and domestic appliances as well as the construction, where the water damages are most evident.

Panic alarm in social office

The panic alarm system is suitable for giving the employees basic protection against violence in public agencies and offices.

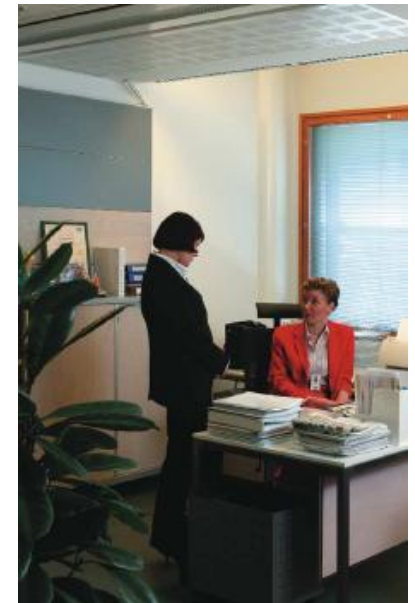

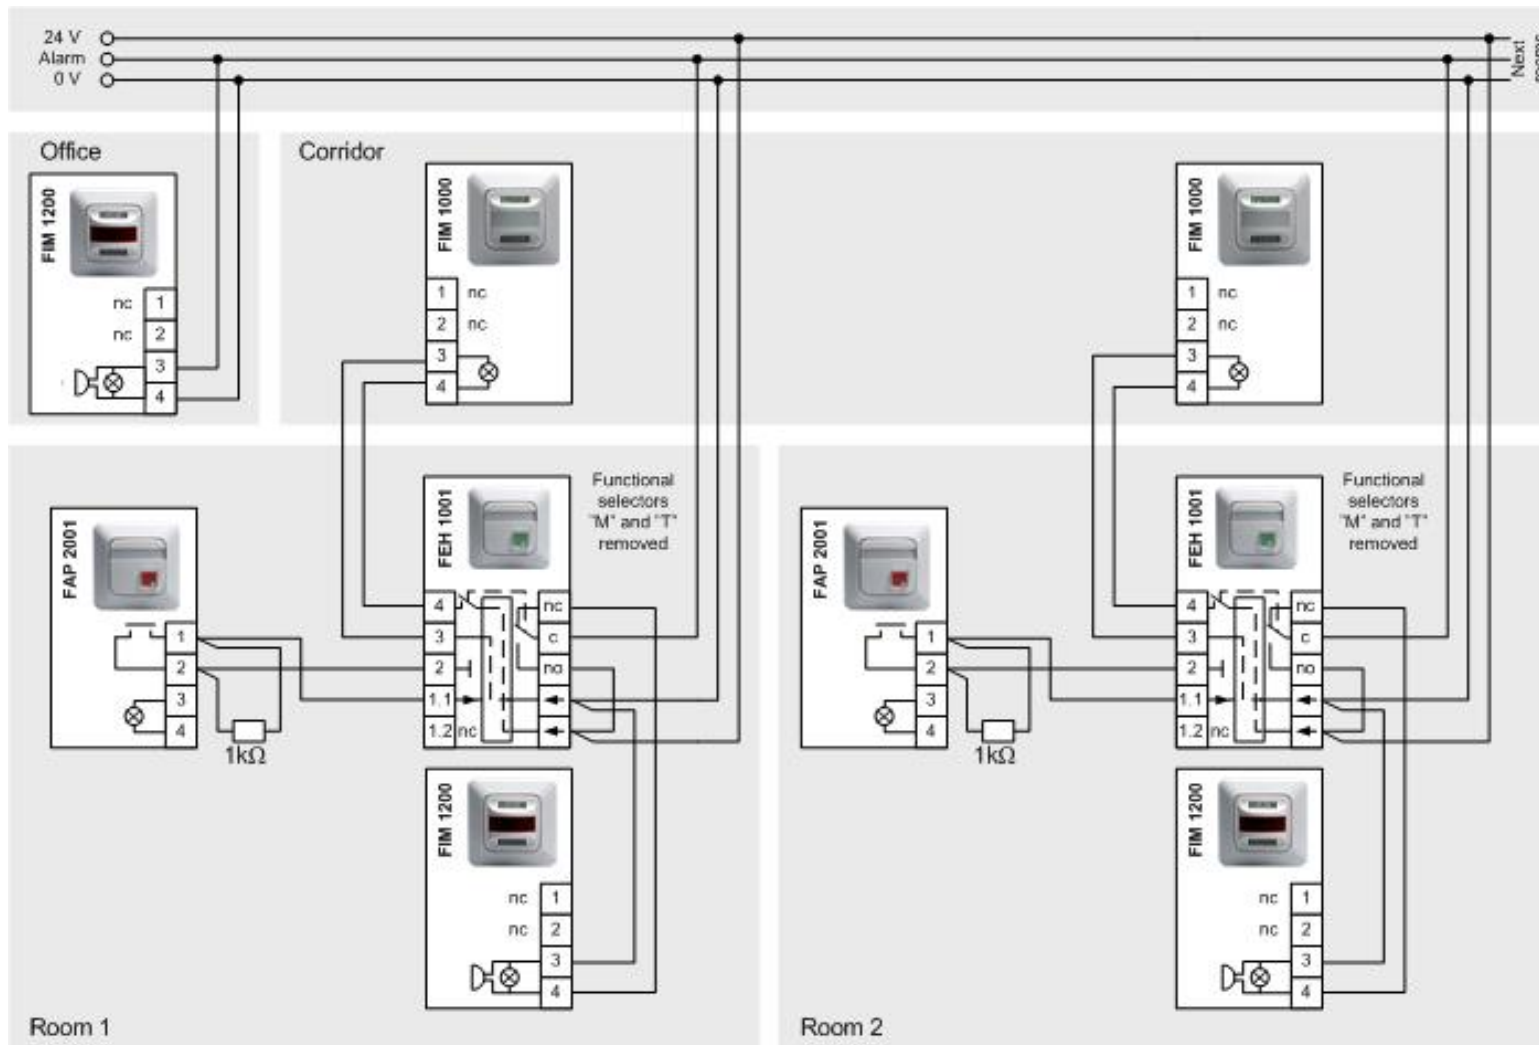

1 call 2 alarm 3 light 4 reset

Panic alarm in social office

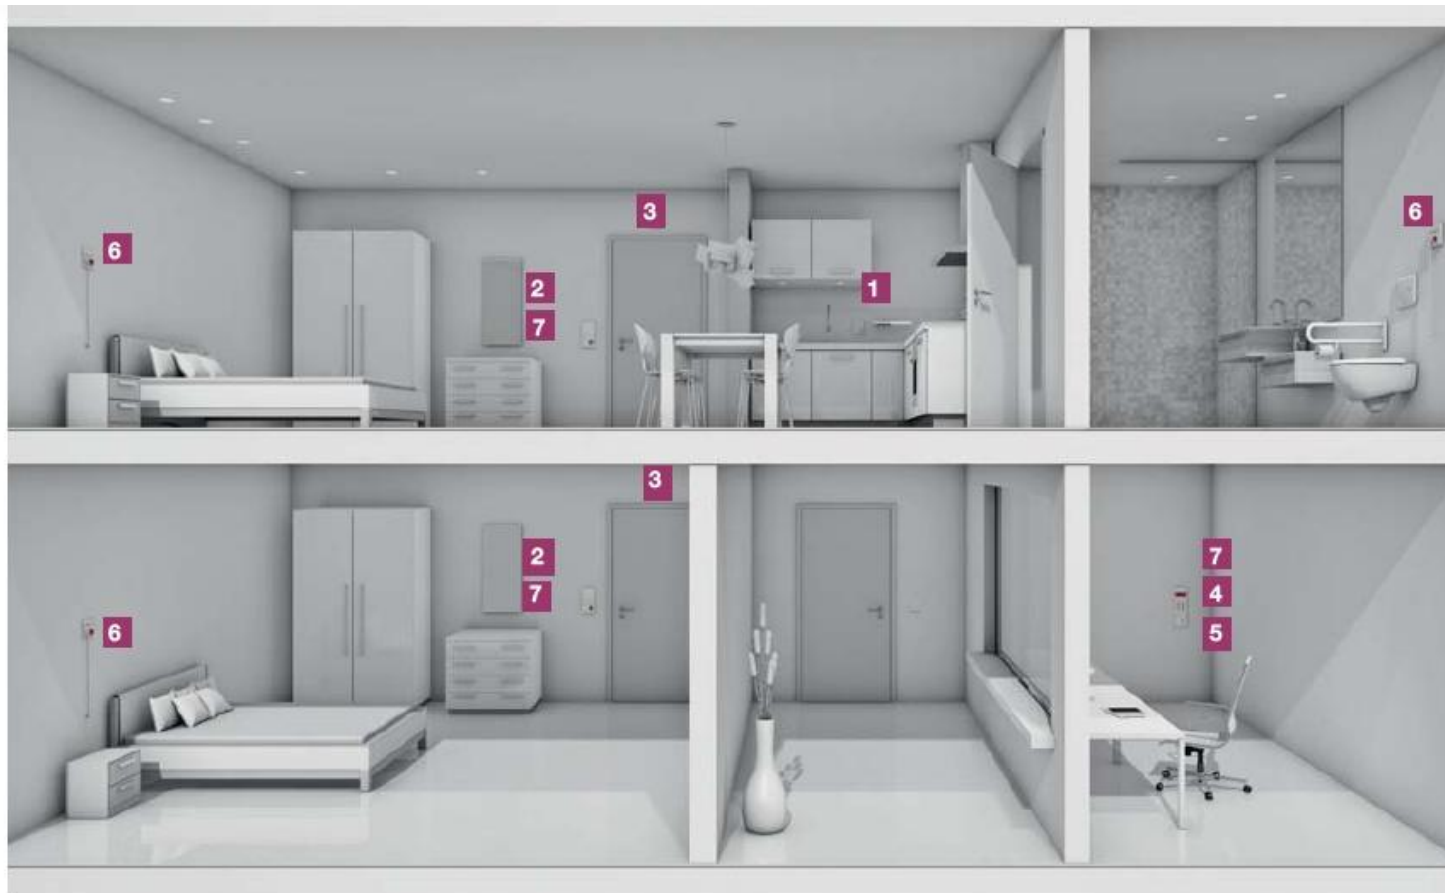

Panic alarm in social office

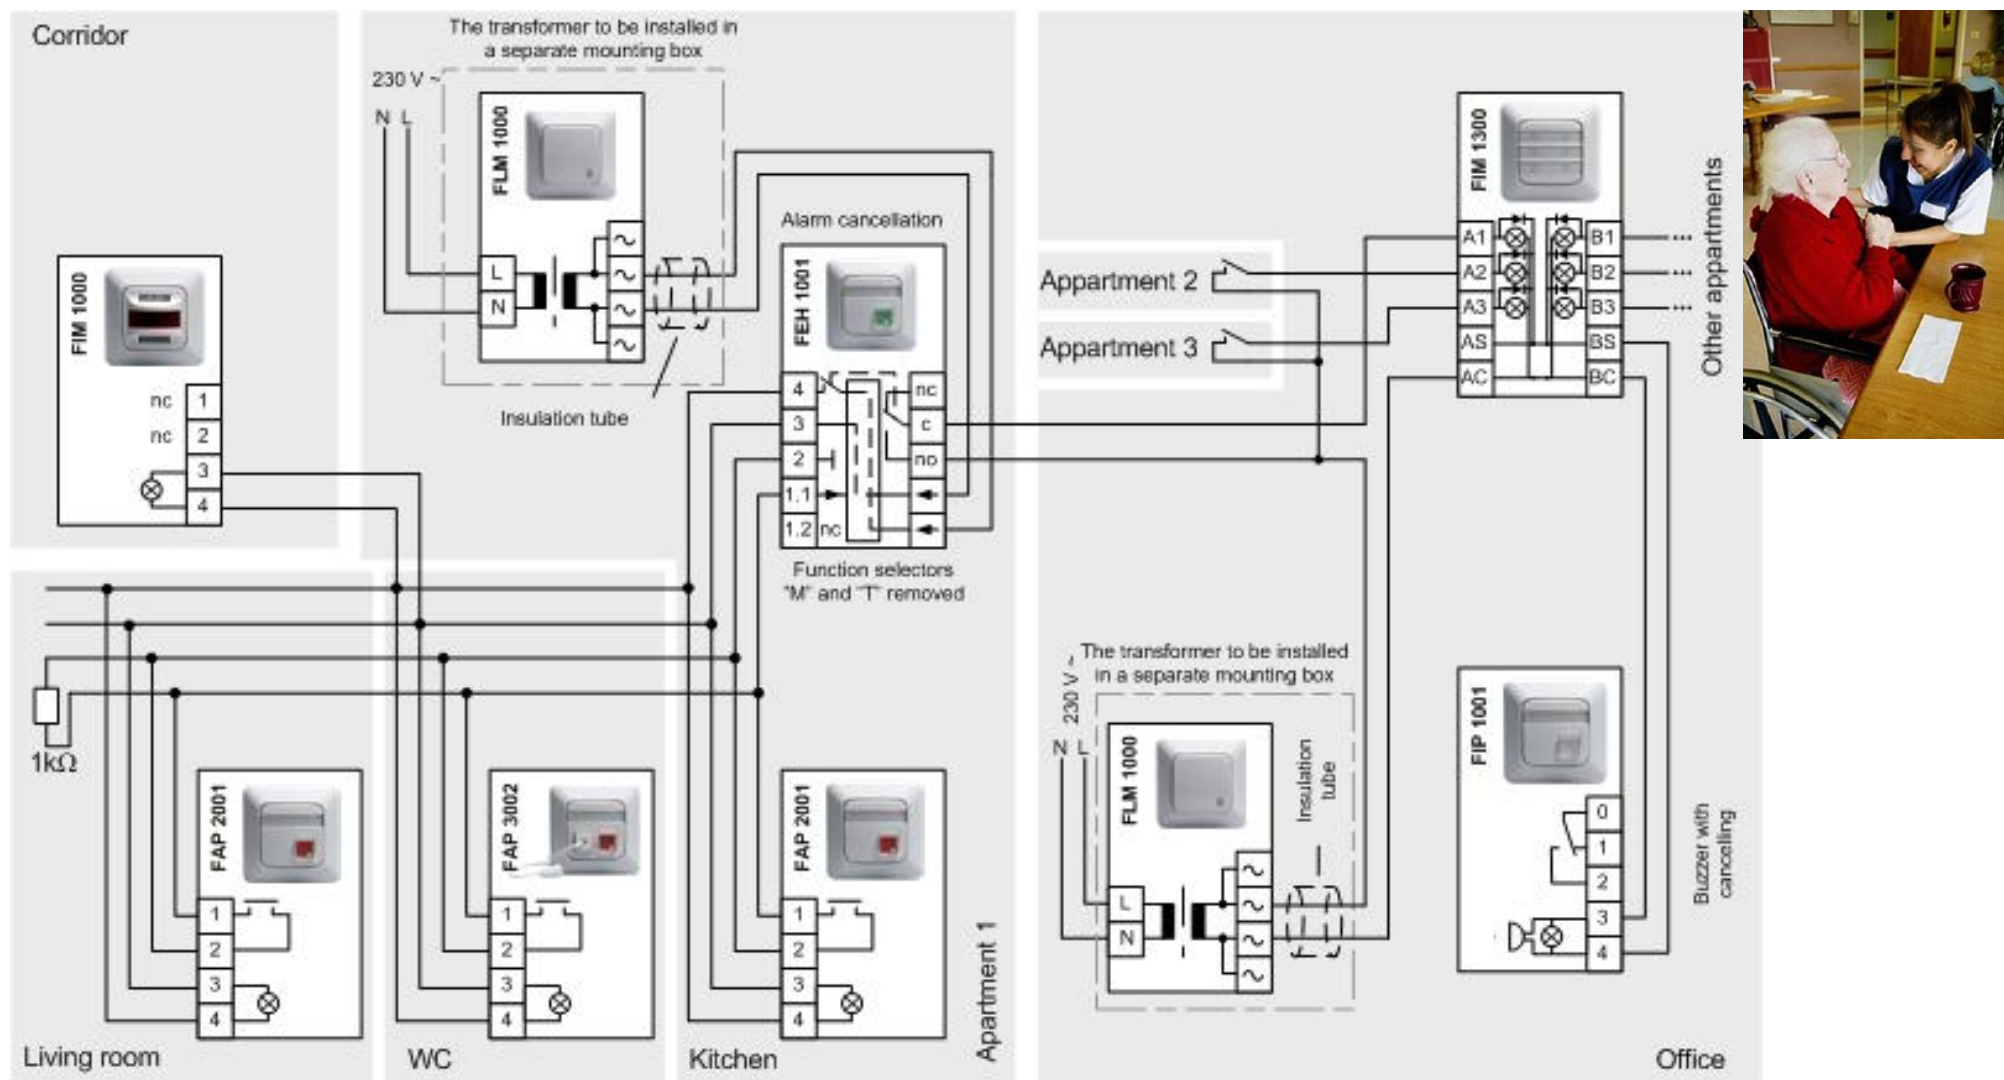

Calling system in day centers

This system is suitable for day centers, where there are calling buttons in each apartment. The nurse receives the alarms at one alarm panel which is located in the office.

Calling system in day centers

Entrance request in office hotels

This system is well suitable for office hotels or clinics. The system enables to transfer a signal from the front door inside to several receiving points. The signal can be cancelled from each receiving point. At the same time one can open the front door remotely.

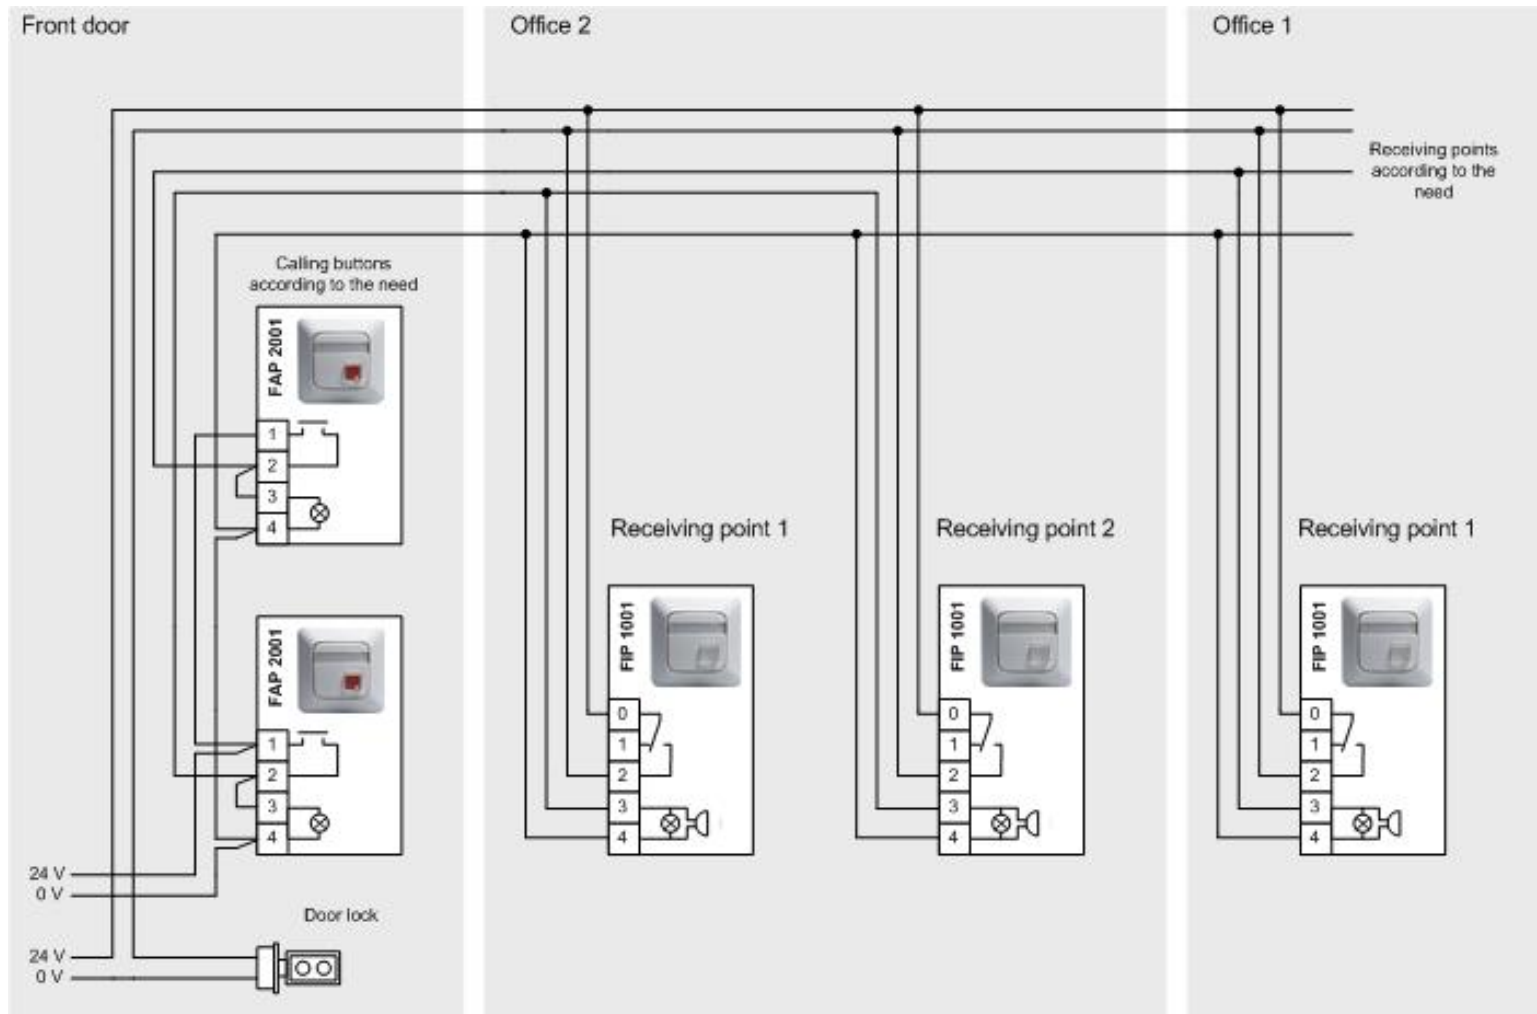

1 Alarm & reset

2 call

Entrance request in office hotels

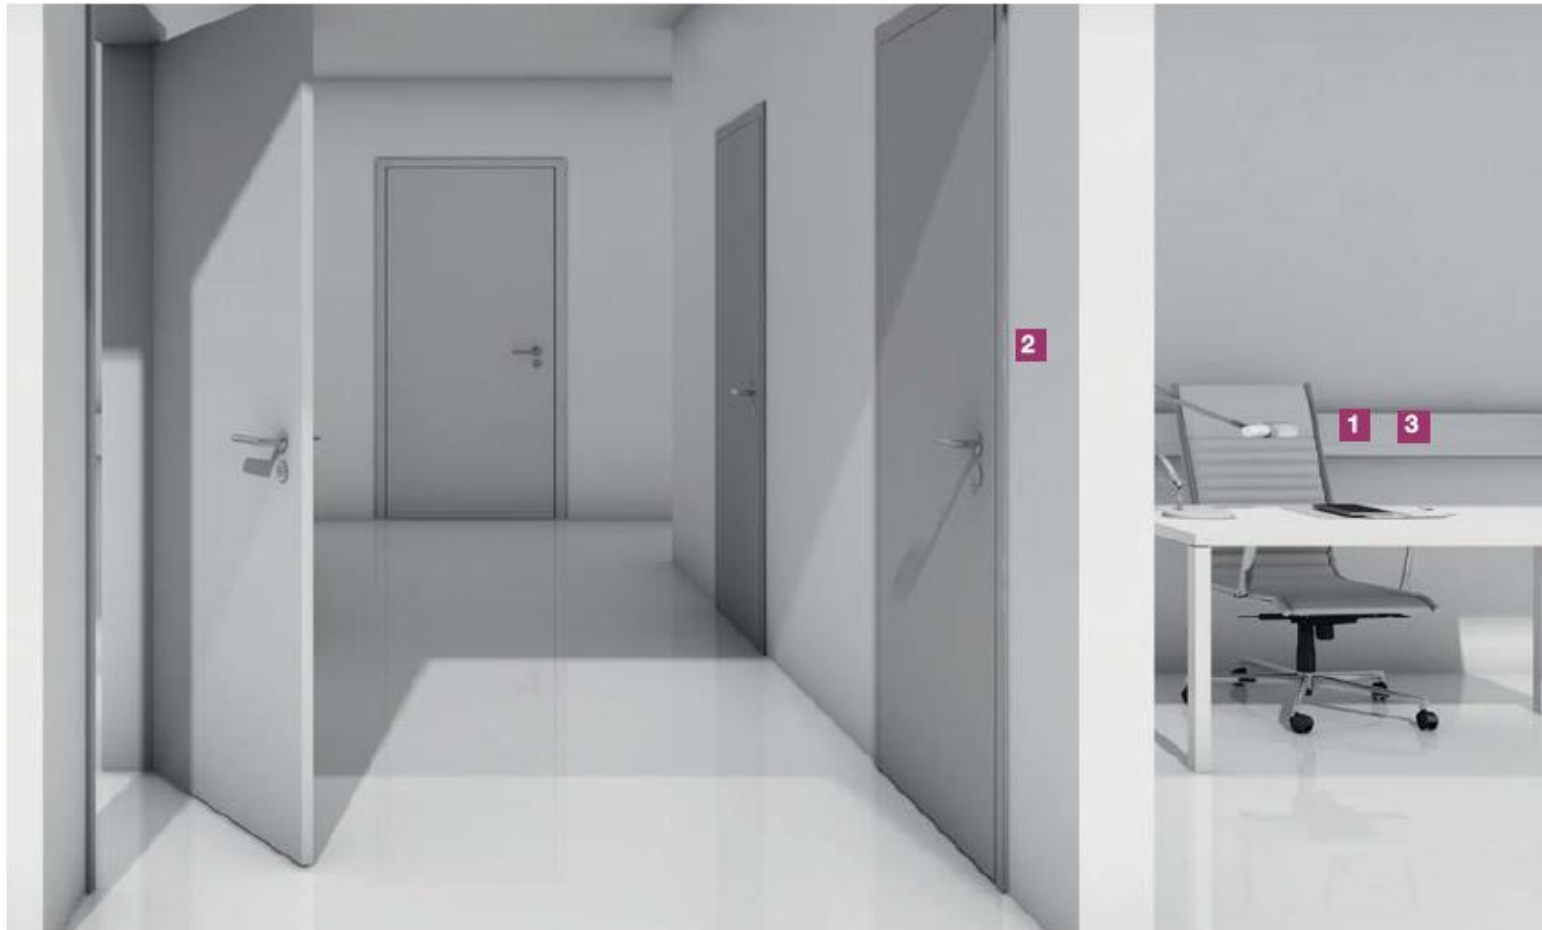

Busy Light

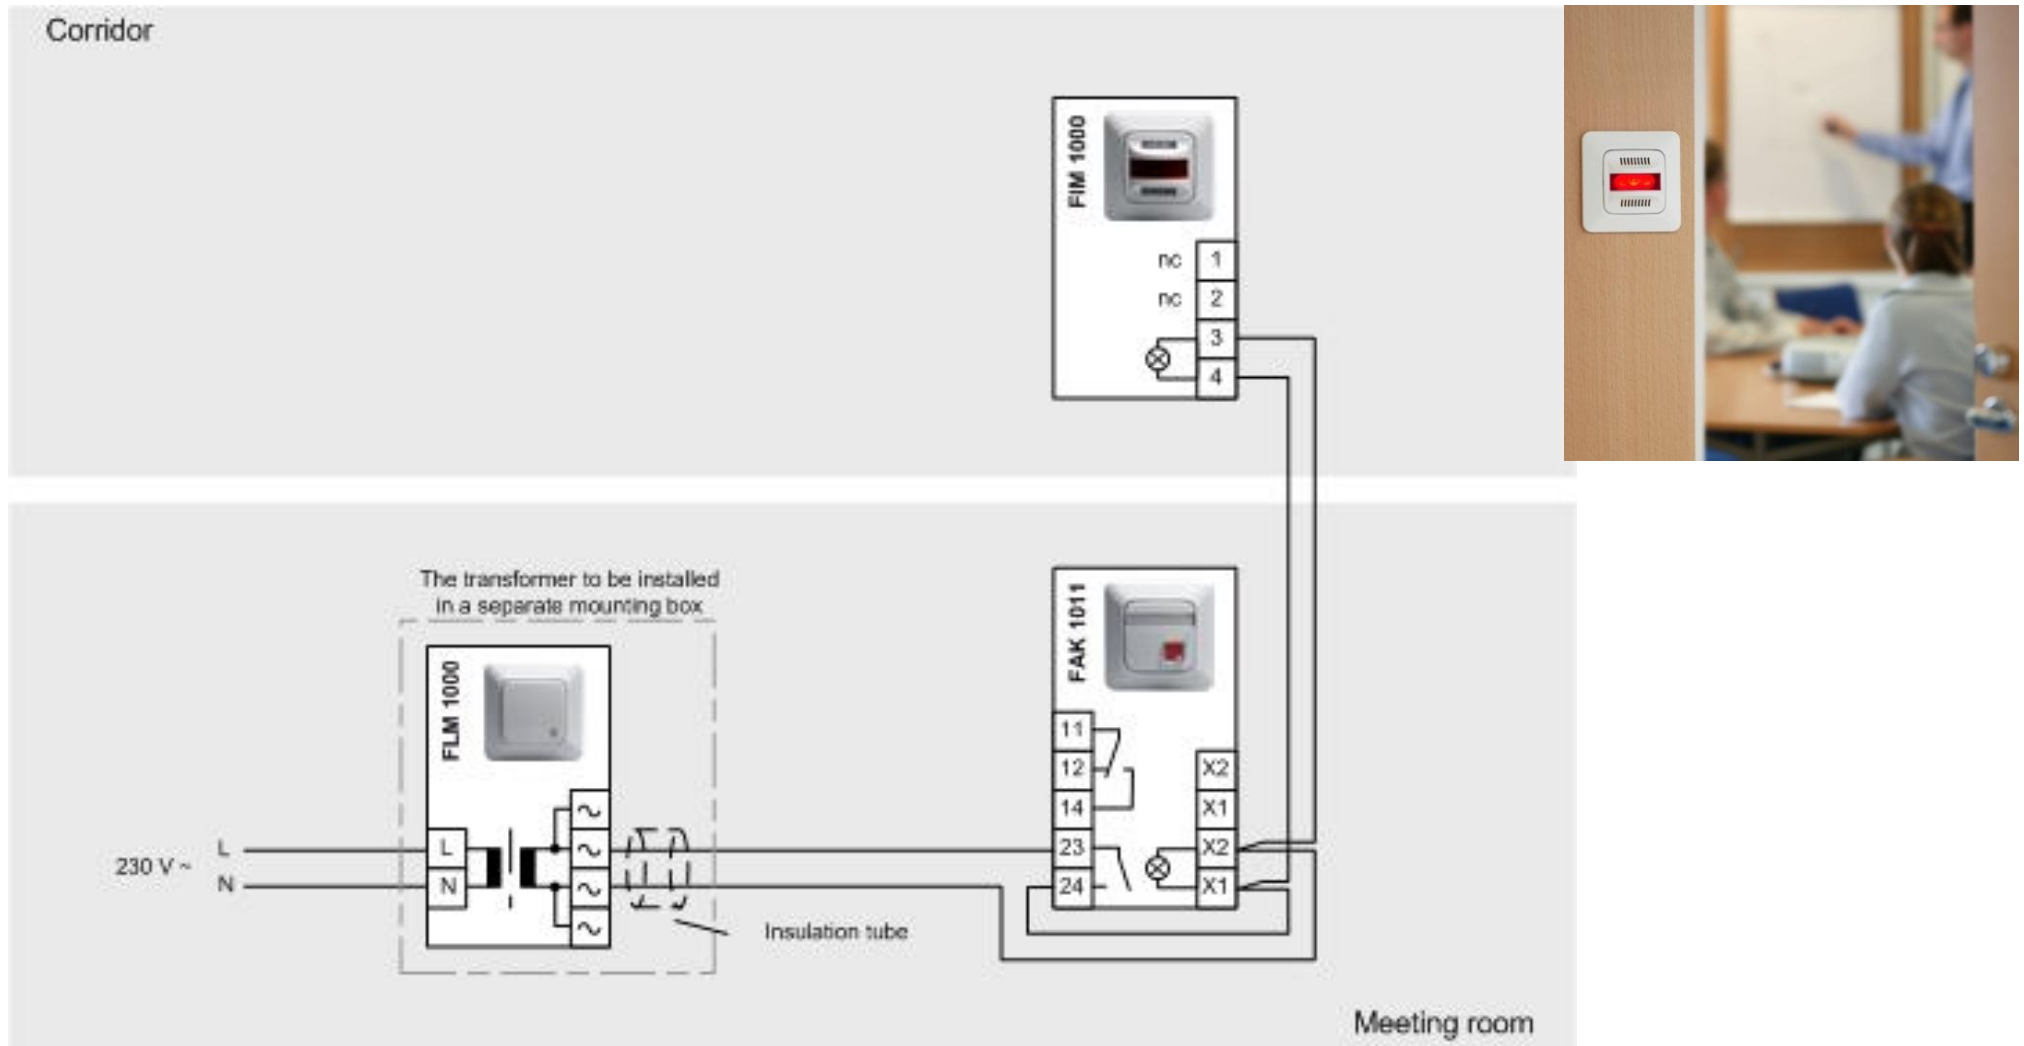

The busy light is used in offices, conference etc rooms to indicate the message "don't disturb" to people outside the room.
