

ABB UNIVERSITY COURSE DESCRIPTION

S303

Cyber Security for Symphony Plus

Learn to configure and administer the Cyber Security controls of your Windows Operating System and Symphony Plus Control System including System Hardening, Role Based User Management and Microsoft Patching.

Course type and methods

This is an instructor led workshop with short presentations and demonstrations, extended exercises, and hands-on sessions and discussion.

Student Profile

This course is for customers who maintain and administer their ABB Symphony Plus control systems.

Prerequisites

Before attending this course, students must have strong knowledge of Windows 7, Windows 2008 Server, TCP/IP Networks, and Microsoft Active Directory administration and troubleshooting.

Course objectives

Upon completion of this course the participants will be able to:

- Understand the basic theories of implementing a defense in depth program.
- Execute basic system hardening on a Symphony Plus control system.
- Understand and administer the capabilities of Rolebased user management in Symphony Plus.
- Apply custom security levels and security groups to Symphony Plus databases
- Familiarize with ABB's Patch Testing program and patch a system using various methods.
