ABB

ClimaECO: ABB i-bus® KNX HVAC Solutions

What is ClimaECO?

ClimaECO is our campaign to **highlight** our **HVAC Solutions** inside the **ABB i-bus® KNX** System.

Our ClimaECO offering consists of the **new developed Products** and the **established KNX HVAC range**.

The ClimaECO focuses now on **water based HVAC** and will be **extended by further Developments**.

ClimaECO: ABB i-bus® KNX HVAC Solutions

Customer Value Proposition

Room

Room Solutions

A complete room automation solution for all types of commercial buildings

Building

Building Solutions

A holistic automation solution for small to medium commercial buildings

System Integrator

Consultant

Building Operator

Investor / Owner

Sales Channel Harmony

ABB as a product solution supplier presents no channel conflict to its partners as compared to notable 'turn key' competitors

Secure Investment

ABB is a reliable partner especially for Investors and Building Owners as compared to the small / local supplier.

Solutions based purely on open and standardized technologies thus no single source and reducing system dependencies.

Cost Saving

During planning, integration, maintenance and by energy efficiency. Achievement of energy efficiency class A according to EN 15232 with up to 30 percent energy savings

ClimaECO: ABB i-bus® KNX HVAC Solutions

Customer Value Proposition

System Integrator

Consultant

Building Operator

Investor / Building Owner

Consistent solution from Consumption to Generation

Customers expect as much as possible from one provider, both in software, hardware and service like consulting by ABB

Sophisticated Hardware

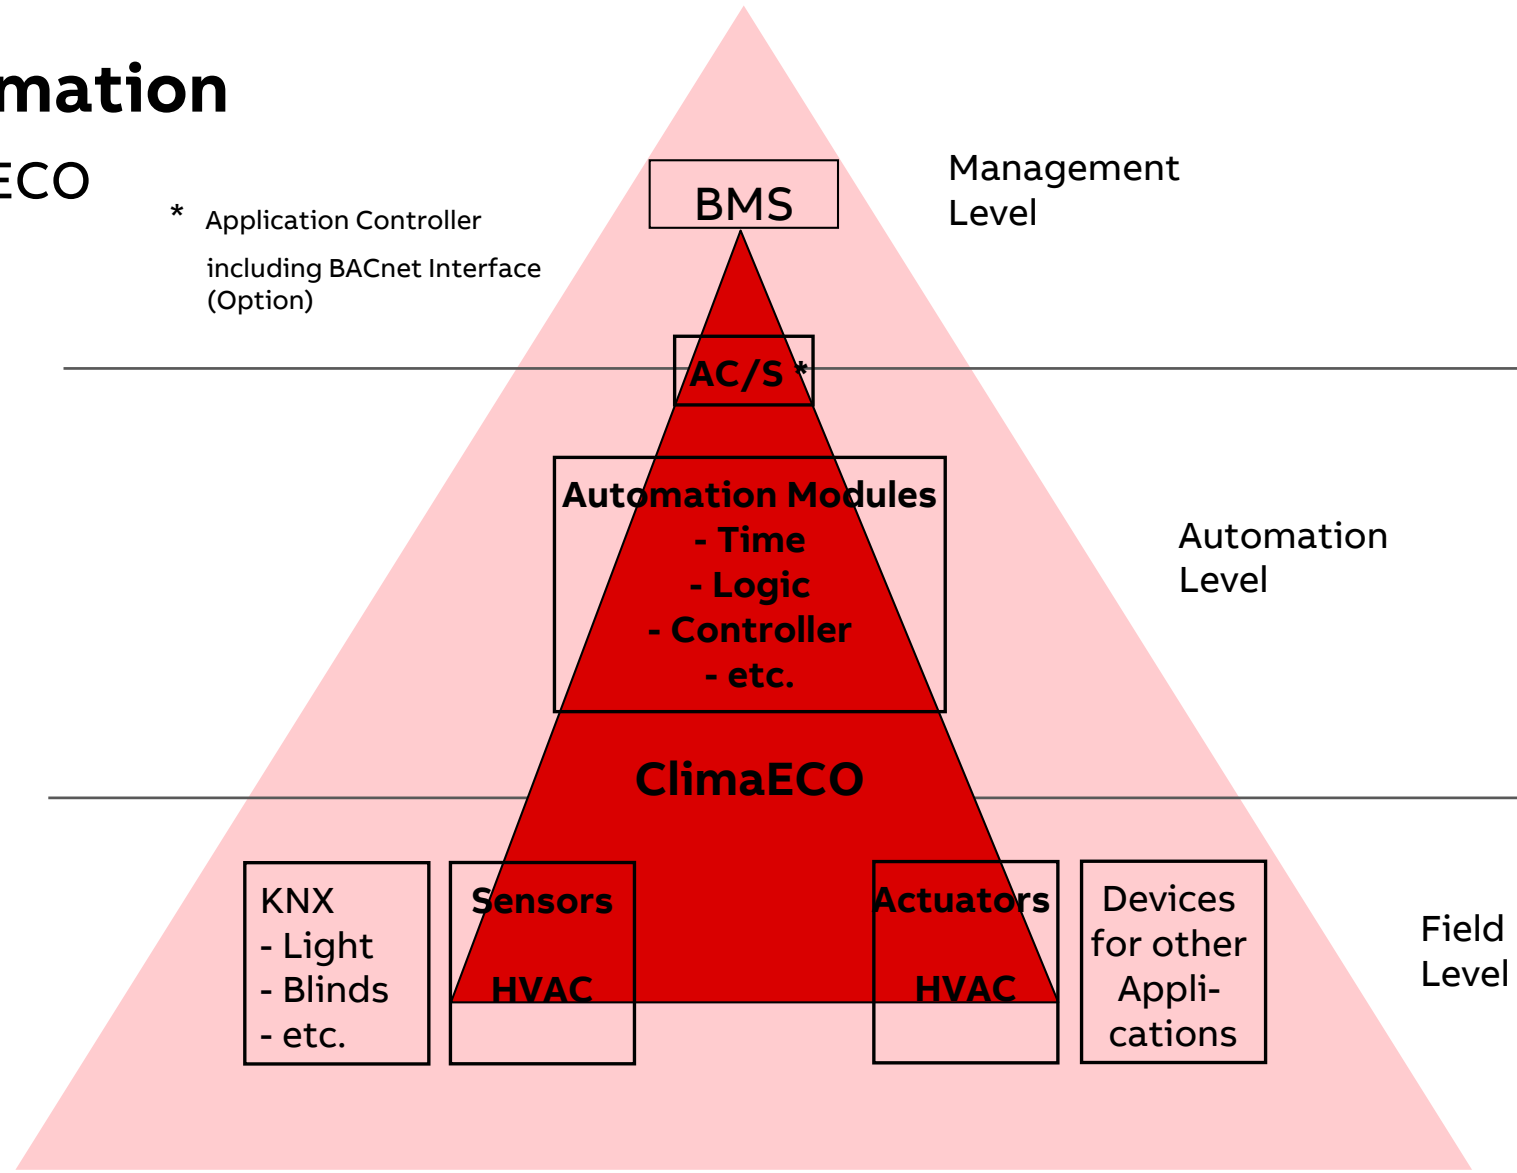

All necessary components from ABB made in Germany

Local Sales and worldwide Support

ABB as an international company with its impeccable reputation, proven in numerous projects at different locations all over the world, can give the necessary assistance to implement HVAC solutions based upon ClimaECO from ABB

Building Automation

Positioning ClimaECO

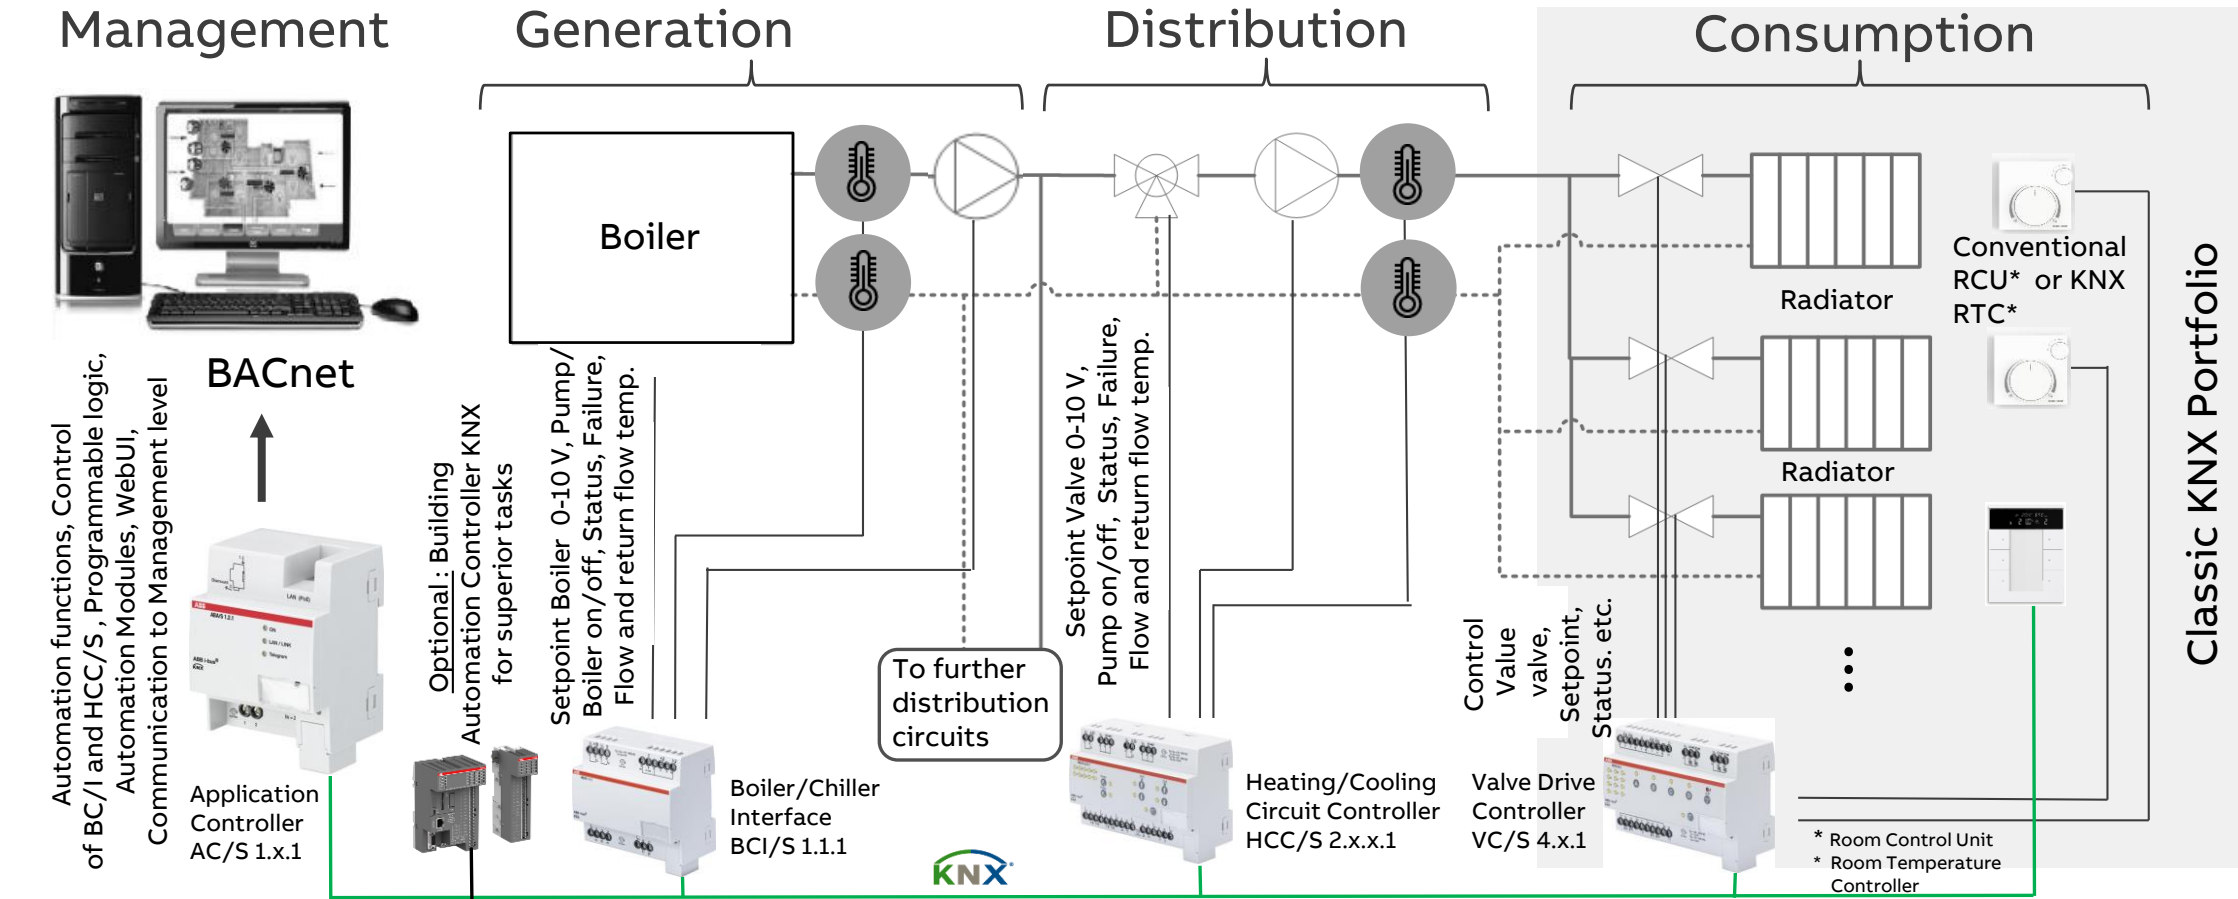

ClimaECO: ABB i-bus® KNX HVAC Solutions

A holistic HVAC Building Automation System, over 30 new devices

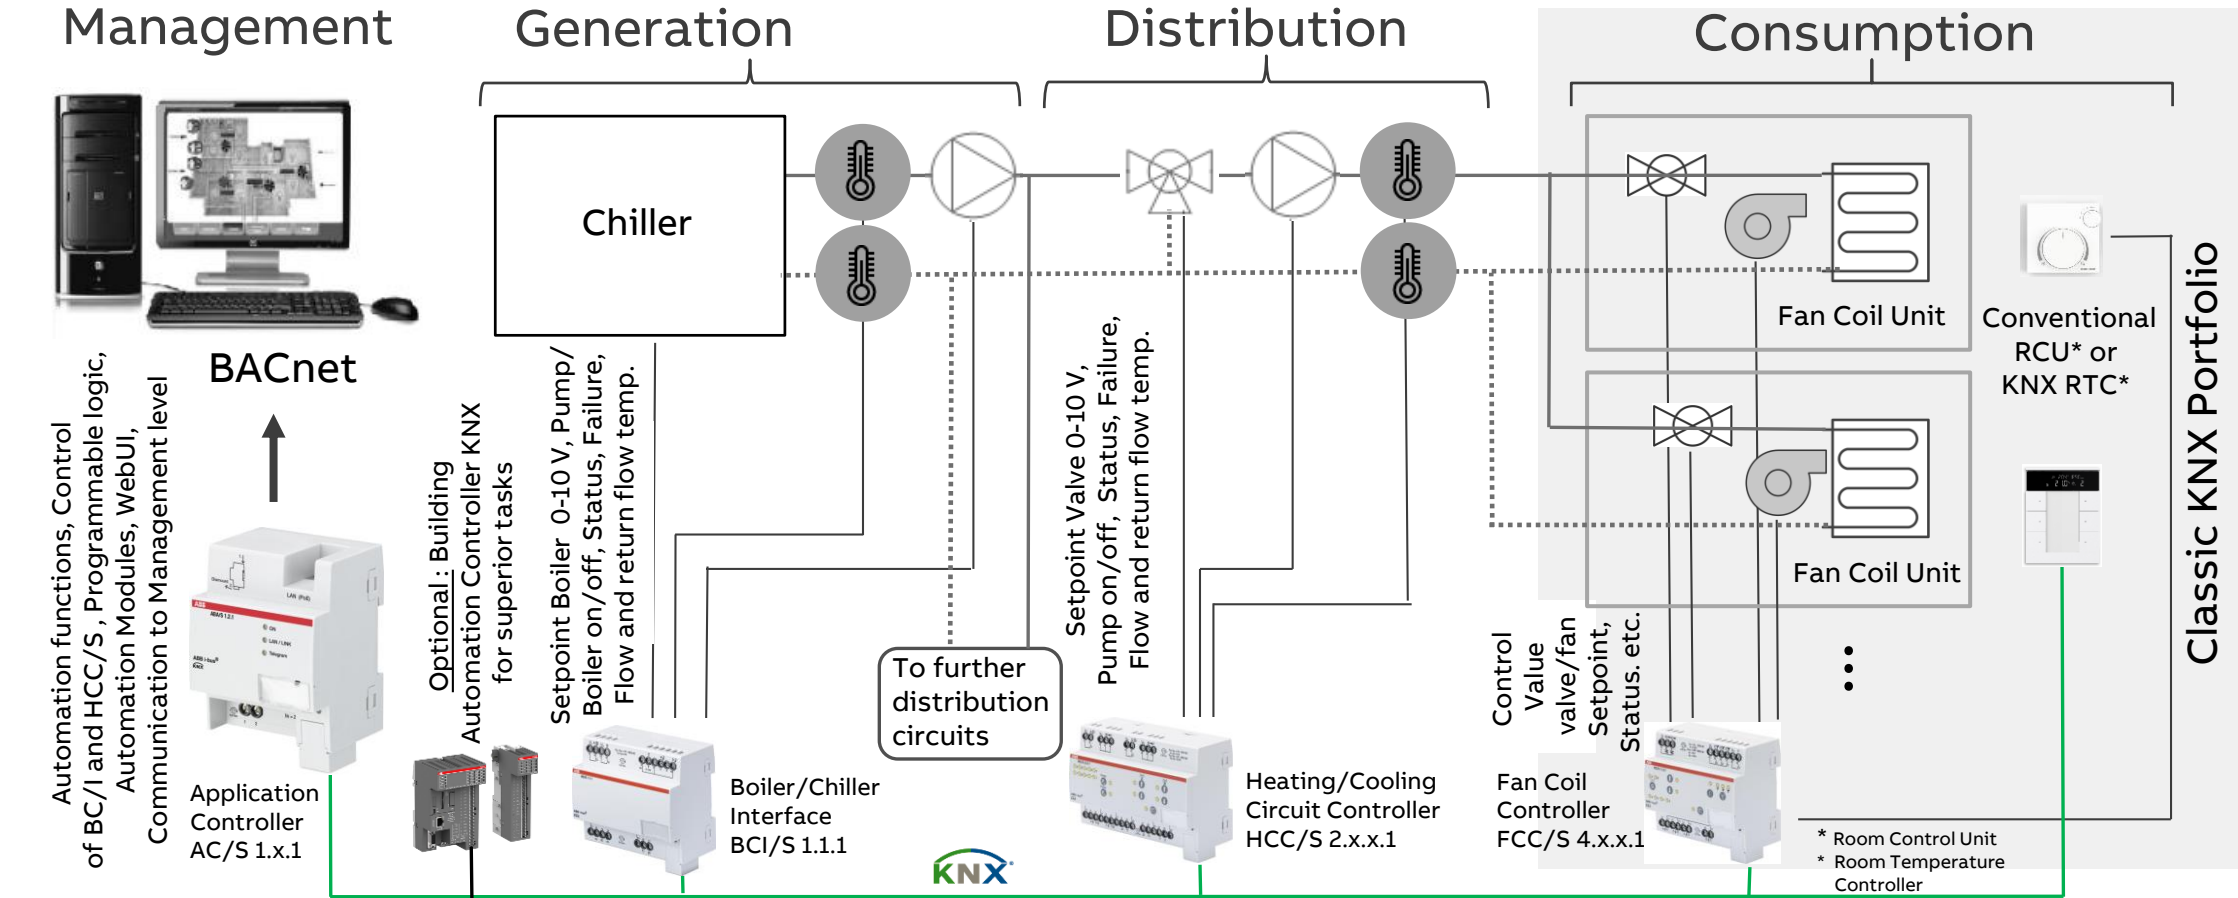

ClimaECO: ABB i-bus® KNX HVAC Solutions

Principle Heating with Radiator

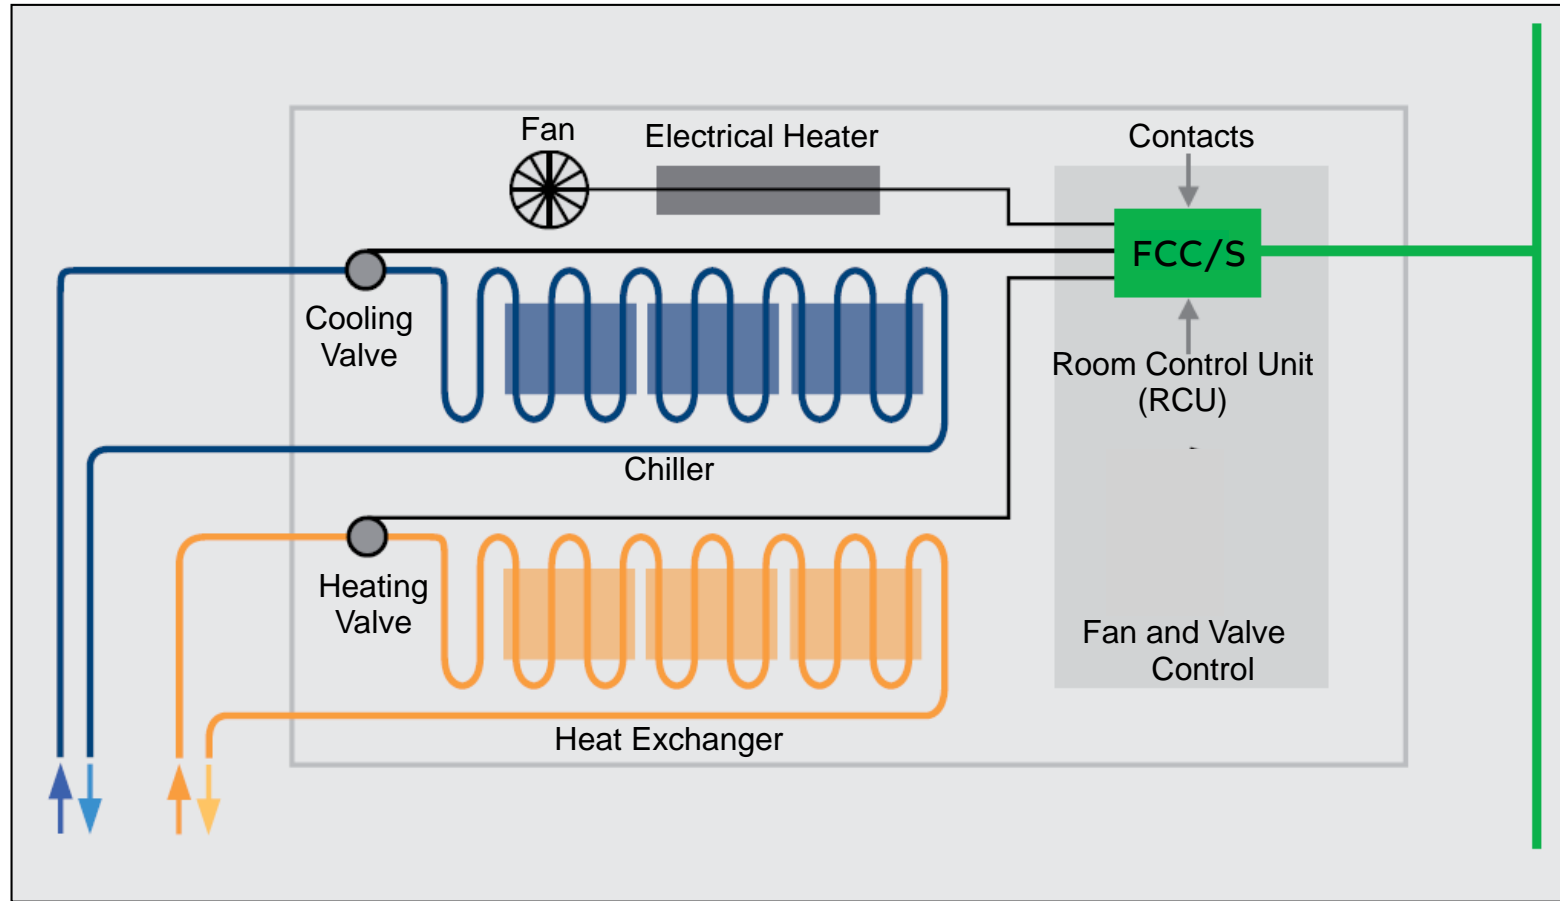

ClimaECO: ABB i-bus® KNX HVAC Solutions

Principle Cooling with Fan Coil Unit

Fan Coil Controller FCC/S 1.x.x.1

Fan Coil Unit in principle

Fan Coil Controller FCC/S 1.x.x.1

Introduction

Motivation – New Features

- Most comprehensive product family for controlling all kind of Fan Coil Units in the KNX market → 9 Components!
- Electrothermal and motor valve drives
 - 2 electronic outputs
- 0-10 V valve drives
 - 2 x 0-10 V outputs
- 1,2, or 3 step fan
- 0 - 10 V fan **NEW**
- All combinations of digital and analogue fan and valve control **NEW**
- Integrated room temperature controller for conventional Room Control Units (RCU) **NEW**

Fan Coil Controller FCC/S 1.x.x.1

Introduction

Motivation – New Features

- Parametrizable as actuator or controller/actuator **NEW**
- With and without manual operation
- 4 inputs for digital and analogue signals (PT100, PT1000, KTY, NTC, NI 1000) and connection of conventional Room Control Unit (Setpoint and room temperature) **NEW**
- Control of 6-way valves **NEW**
- Control of VAV flaps (**V**ariable **A**ir **V**olume) **NEW**
- ABB i-bus tool support
- With and without manual operation
- Budget variant (FCC/S 1.4.1.1) with one valve output (2 step or PWM), no additional switch contact and no manual operation **NEW**
- Existing Fan Coil Actuators FCA/S will be replaced
- Availability: July 2018

Fan Coil Controller FCC/S 1.x.x.1

Family FCC/S 1.x.x.1

FCC/S 1.1.1.1
3-step Fan, PWM 2-fold

FCC/S 1.1.2.1
3-step Fan, PWM 2-fold, man. Op.

FCC/S 1.2.1.1
3-step Fan, Valve 0-10 V

FCC/S 1.2.2.1
3-step Fan, Valve 0-10 V, man. Op.

FCC/S 1.4.1.1
3-step Fan, PWM 1-fold
(no additional switch contact)

FCC/S 1.3.1.1
Fan 0-10 V, Valve 0-10 V

FCC/S 1.3.2.1
Fan 0-10 V, Valve 0-10 V, man. Op.

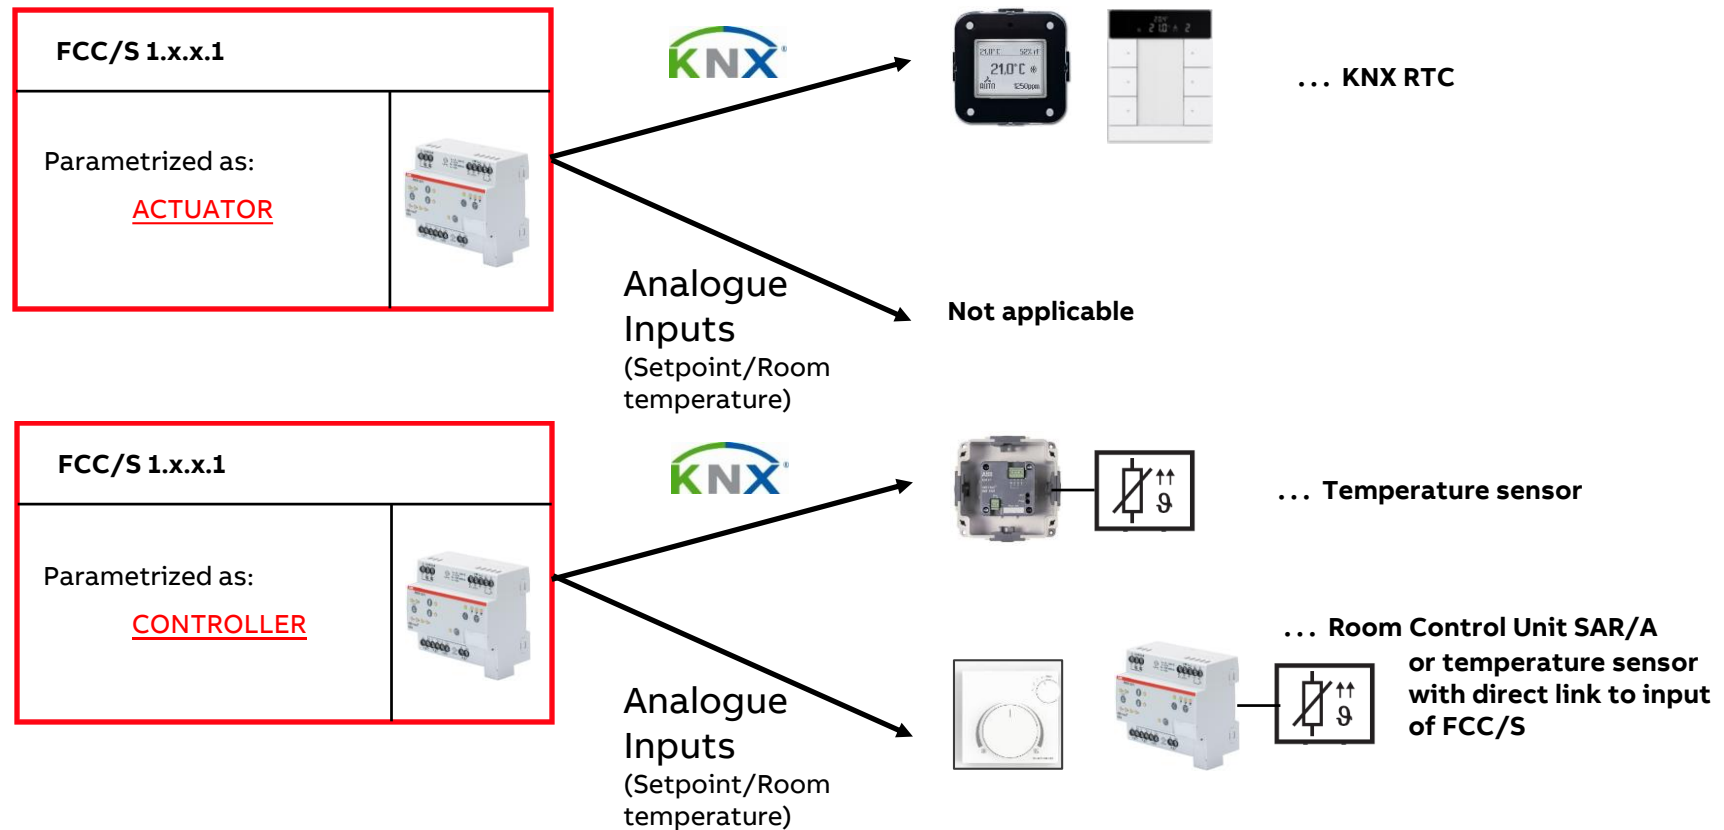

FCC/S 1.5.1.1
Fan 0-10 V, PWM 2-fold

FCC/S 1.5.2.1
Fan 0-10 V, PWM 2-fold, man. Op.

Fan Coil Controller FCC/S 1.x.x.1

Assignment Controller - Actuator

Valve Drive Controller VC/S 4.x.1

Valve control in principle

Valve Drive Controller VC/S 4.x.1

Introduction

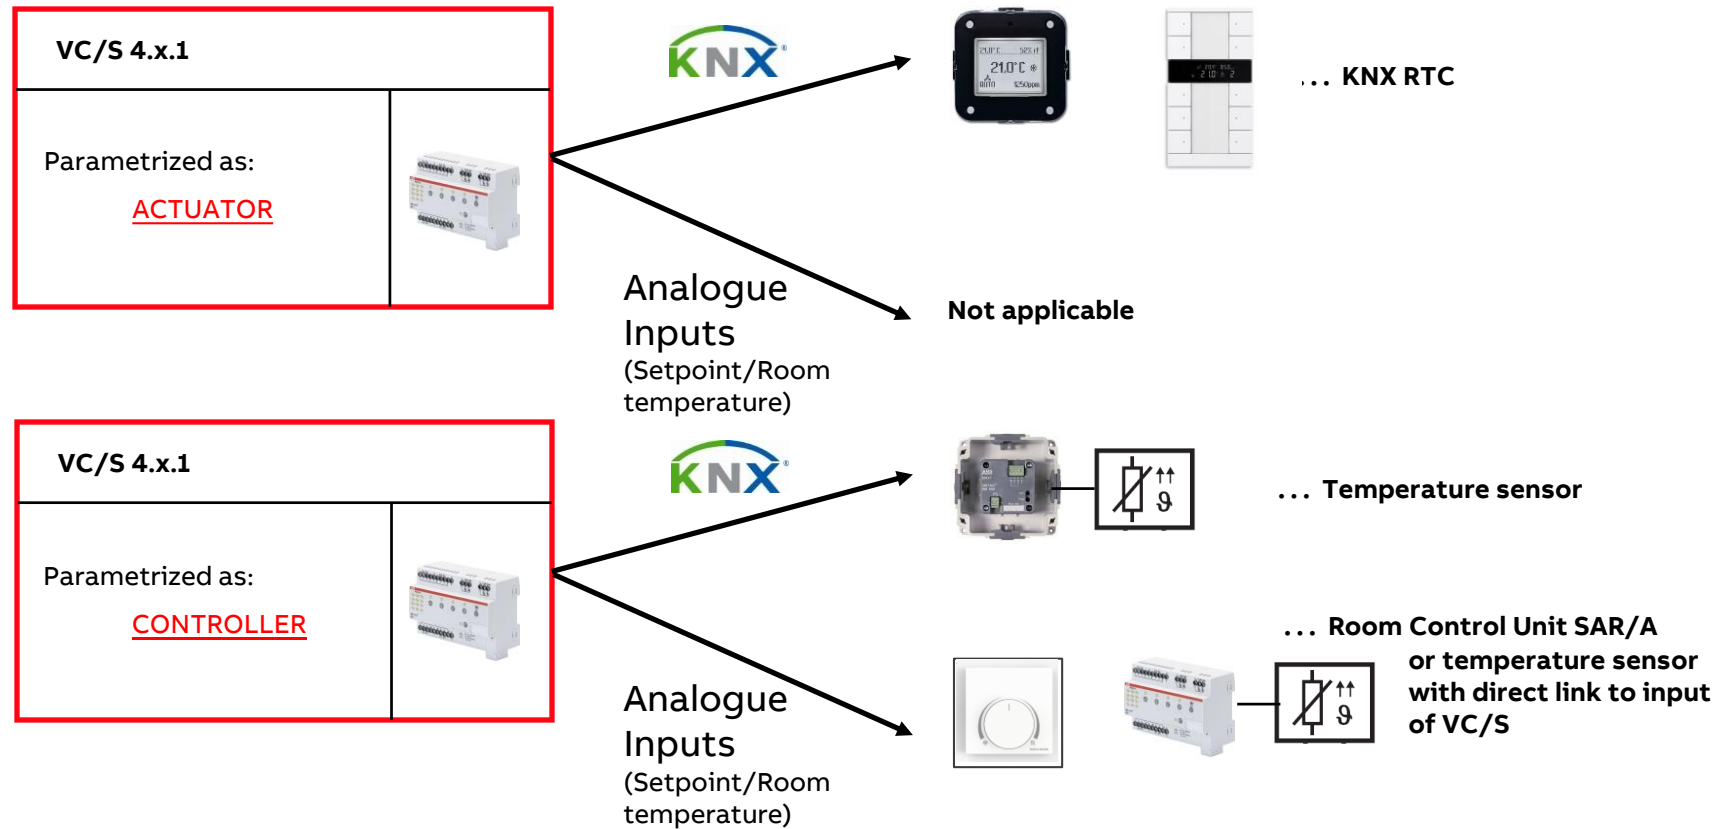

Motivation – New Features

- Two devices with four channels for valve control
- Electrothermal valve drives with four channels
- With and without manual operation
- 12 inputs (digital and analogue, 3 each channel) for temperature measurement, dew point sensor, window contact, etc.
- Integrated room temperature controller for conventional Room Control Units (RCU)
- Parametrizable as actuator or controller/actuator **NEW**
- Existing Valve Drive Actuators will be not replaced
- Availability: August 2018

Valve Drive Controller VC/S 4.x.1

Assignment Controller - Actuator

Room Control Unit SAR/A and SAF/A

Introduction

Motivation – Features

- Conventional (non KNX!) operating element for room temperature control (RCU) **NEW**
- Works together with Controller in FCC/S or VC/S
- Lower in price
- to be competitive in projects with demands for this solution
- Simple and cost efficient user interface but powerful system behind
- Two devices:
 - SAR/A with set point control for radiators, floor heating and cooling ceiling
 - SAF/A with set point and fan speed control for fan coil units
- Integrated temperature sensor
- White color
- Surface mounted

Room Control Unit SAR/A and SAF/A

Introduction

Example: Connection FCC/S

4 wires required

- 2 wires for setpoint input A (mandatory)
- 2 wires for room temperature
 - optional, can come also from another sensor, e.g. KNX presence detector
- Fan speed signal detection via different resistor levels on setpoint wires in addition to the resistance of the temperature sensor
- Availability: July 2018

ClimaECO sensors

New Range of KNX sensors

Introduction

- New range of push button sensors and room temperature controller created together with the project ClimaECO
- Complete product range:
 - Control element 8-fold and 12-fold with integrated temperature sensor
 - Control element with RTC slave 6- and 10-fold
 - Control element with RTC 6- and 10-fold
 - Control element with RTC 6- and 10-fold plus CO₂ and humidity sensor and controller
- User friendly with an good User Interface-design for the devices with display
- Labelling with icons and/or text via an web-tool by the customer himself
- All devices with an mechanical anti theft protection

NEW

ClimaECO sensors

New Range of KNX sensors

Introduction

- Installation in every country in the world (VDE, BS, NEMA, Australian brackets, etc.)
- Sensors can be installed/mounted in a flush mounted box or separate surface mounted box
- Unified RTC concept
- Available in studio white (-84)
- Native ETS application for ETS4 and ETS5
- Values and icons are shown on a white illuminated display
- Status LED's with day and night mode
- Status LED's with ABB color concept
- No frame required
- Availability: August 2018

Heating Cooling Circuit Controller HCC/S 2.x.x.1

Introduction

Why Heating Cooling Circuits in a HVAC System?

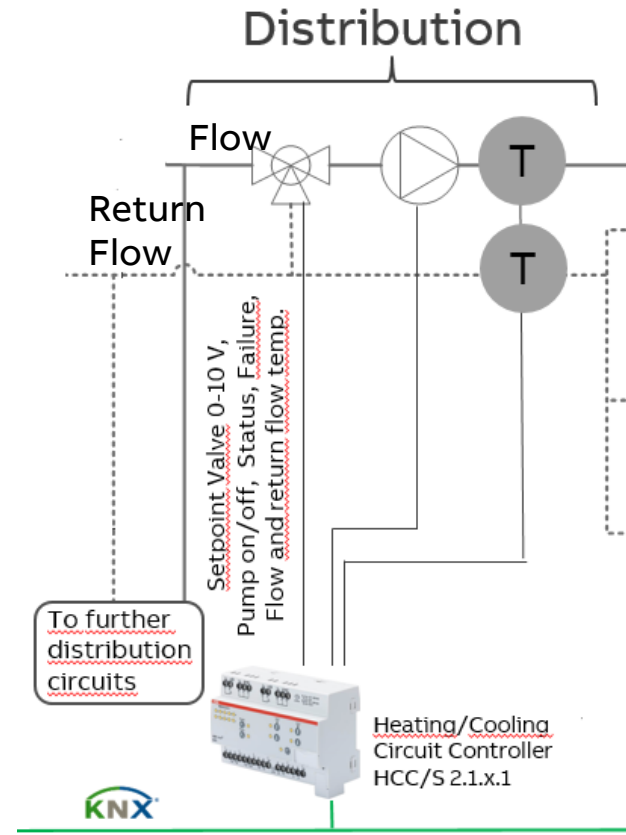

In a heating/cooling system the hot/cold water has to be distributed to various units in a building.

Units can be separate flats in a residential building, individual departments/shops in a commercial building, particular circuits for radiator or floor heating/cooling ceiling and more

Requirements of these units: individual consumption and measurement, different water temperature and pressure, turn off of the circuit (pump off and valve closed) and more

A Heating Cooling circuit Controller together with the valve, pump and temperature sensors can handle these requirements

→ For a holistic approach HCC/S 2.x.x.1 from ABB based on KNX

Heating Cooling Circuit Controller HCC/S 2.x.x.1

Introduction

Motivation – New Features

- Control of Heating/Cooling Circuits **NEW**
 - Control of mixing valve/3-way valve:
 - 0 - 10 V motor
 - 3 point motor
 - Control of single/double pump of the heating cooling circuit
 - 2 Channels
 - Measurement of flow- and return flow temperature
 - Binary inputs for status information of the pump
-
- Availability: August 2018

Boiler/Chiller Interface BCI/S 1.1.1

Introduction

Why Boiler/Chiller in a HVAC System?

In a heating/cooling system hot/cold water has to be generated with the right amount and temperature to be distributed to various circuits/units in a building.

A boiler or chiller produces the tempered water but has to be controlled depending on the demand of the total heating/cooling system

→ For a holistic approach Boiler Chiller Interface BCI/S 1.1.1 from ABB based on KNX

Boiler/Chiller Interface BCI/S 1.1.1

Introduction

Motivation – New Features

- Control of a Boiler/Chiller and the main pump
 - Control of necessary water temperature (set point) in the boiler/chiller via 0-10V
 - Turn on/off of boiler/chiller
 - Turn on/off of pump of the main heating/cooling circuit
 - Measurement of flow- and return flow temperature
 - No controller inside, it's an interface, therefore no interference with the internal safety mechanism of the boiler or chiller unit
 - The main intelligence (especially to provide the right control value) is located in the Application Controller AC/S (ASM's Boiler Heat generator and Chiller)
- Availability: August 2018

NEW

Application Controller AC/S 1.x.1

Introduction

Why Application Controller in a HVAC System?

In a heating/cooling system a superior intelligent unit is required for numerous tasks

Functions like controller capability, collecting and processing data, mathematical functions, interfacing, calculation of control values or displaying and setting of states via web browser belong to it

Device needs connection to KNX and Ethernet, but has no physical In- and Outputs

As in many HVAC systems BACnet is used, therefore an optional BACnet interface is essential

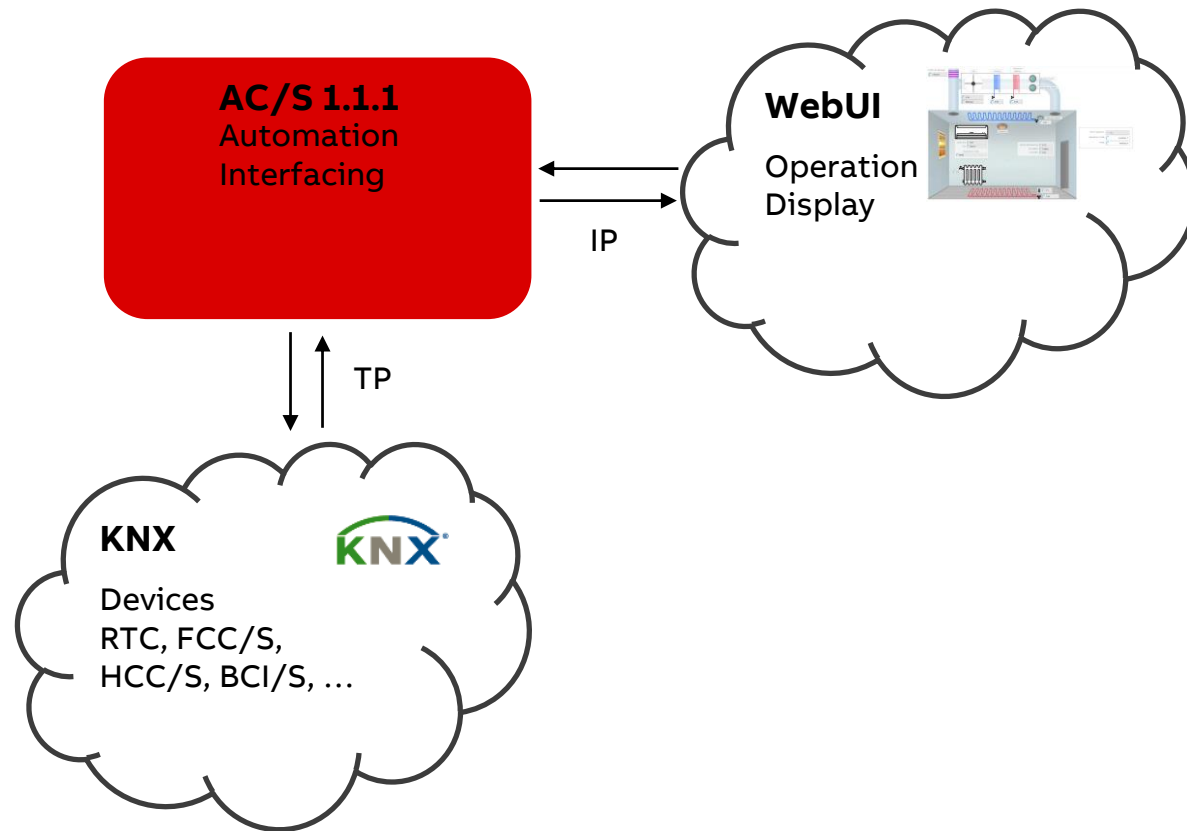

→ For a holistic approach AC/S 1.x.1 with or without BACnet interface from ABB based on KNX

Management

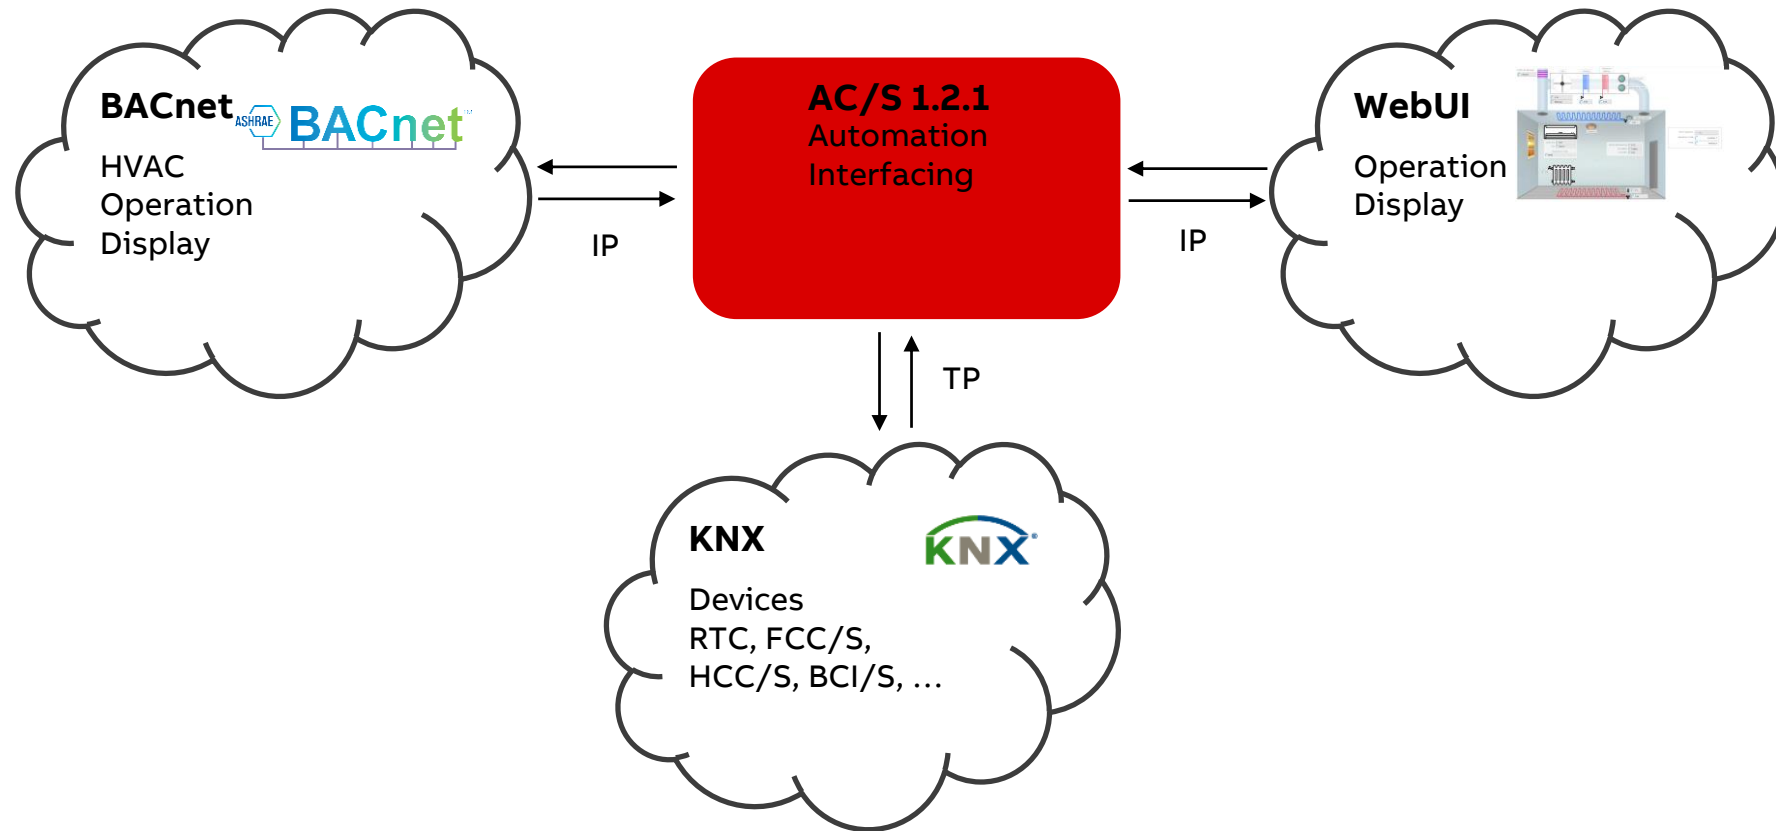

Application Controller AC/S 1.x.1

Principle

Application Controller AC/S 1.x.1

Principle

Application Controller AC/S 1.x.1

Introduction

Motivation – New Features

- Control of the complete HVAC system from consumption to generation **NEW**
- Managing the boiler/chiller
- Managing the Heating/Cooling circuit control
- Necessary for for a consistent solution of a HVAC system completely with ABB i-bus KNX which is demanded from customers and in projects
- Availability: September 2018

Application Controller AC/S 1.x.1

Introduction

ClimaECO

Application Controller and WebUI

Application Controller AC/S 1.x.1

Introduction

Application Controller AC/S 1.x.1

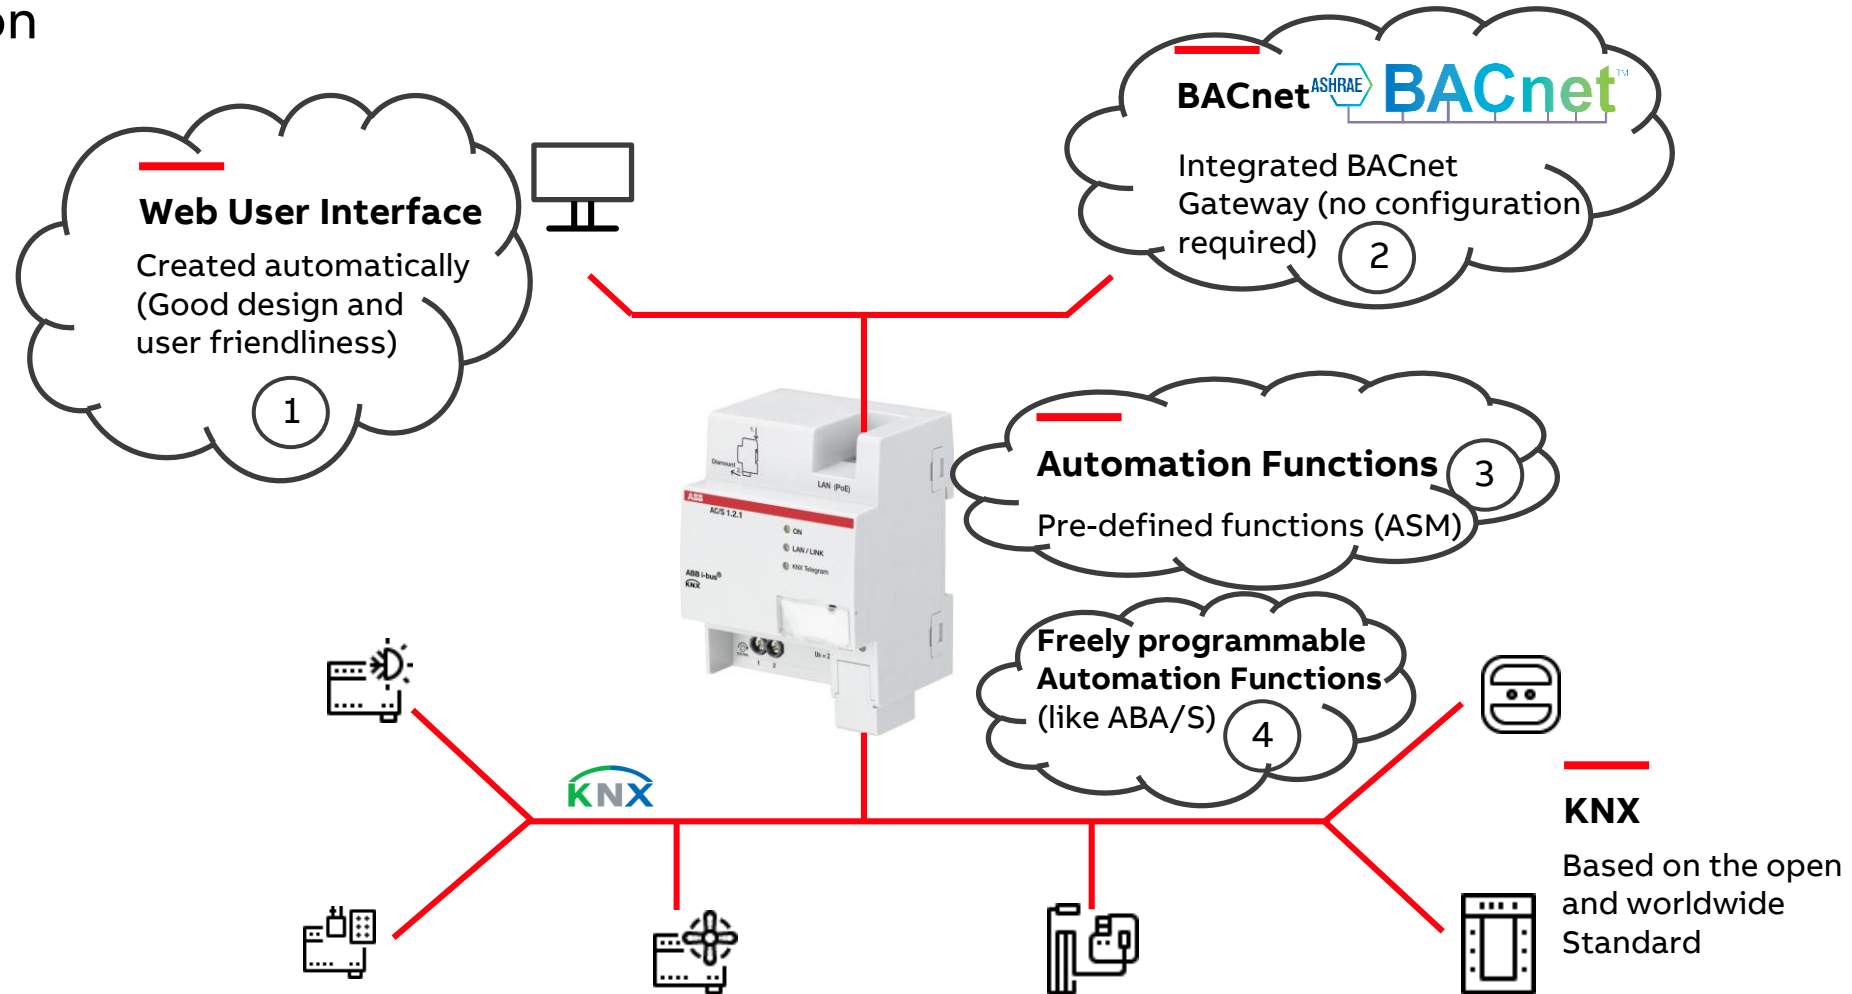

Communication in all Directions → KNX - WebUI - BACnet

The image displays two screenshots of the ABB AC/S1.2.1 Application Controller interface. The top screenshot shows the WebUI at 10.49.121.64/#/rooms, with a temperature value of 2.24 °C highlighted in a red box. The bottom screenshot shows the ETS5 software interface, specifically the BACnet configuration and monitoring section. The 'Analog Value' configuration for Object Identifier 3001 is shown, with the 'Present Value' field also highlighted in a red box. The 'Diagnostics' window at the bottom shows a table of monitored data.

Application Controller AC/S 1.x.1

Introduction

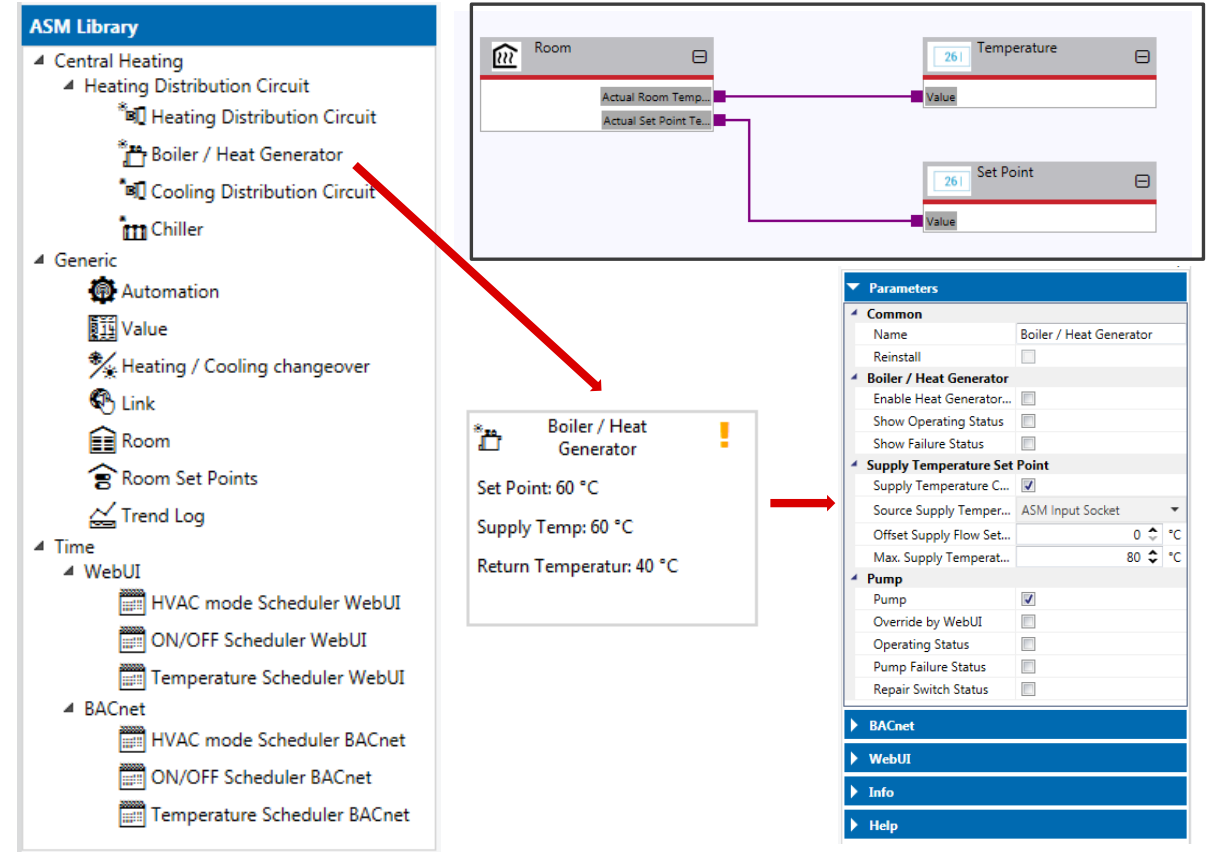

Application Controller AC/S 1.x.1

Introduction

Motivation – New Features

Predefined Automation Modules

- ASM → **A**utomation **S**pecific **M**odules
- Represent specific functionality, can execute function by itself or together with other ASM's e.g. room setpoints or heating/cooling circuit control
 - In- and/or outputs (sockets)
 - Parameters
 - Group objects
 - Linking view with sockets to be connected to KNX objects, WebUI, BACnet or other ASM's

Application Controller AC/S 1.x.1

Introduction

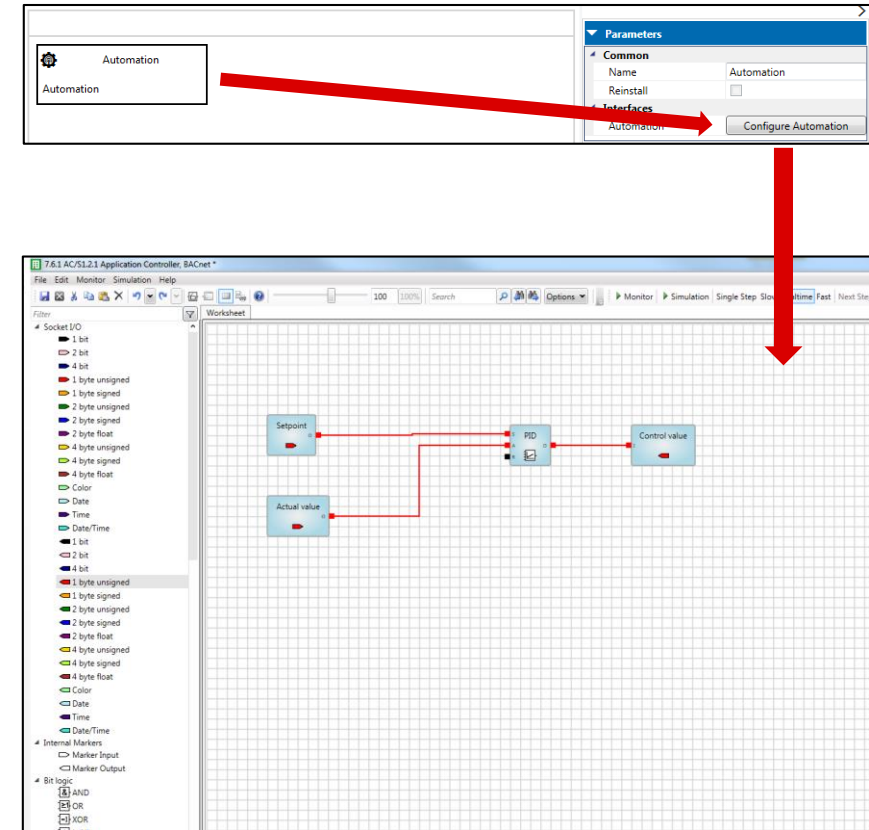

Application Controller AC/S 1.x.1

Introduction

Motivation – New Features

ASM Automation: Freely programmable like Logic Controller
ABA/S 1.2.1

BAC/S 1.5.1 Building Automation Controller KNX

Introduction

Freely Programmable

Easy creation and reuse of Automation Software by standardized Programming Language

Flexible IO-Modules

Pick the In- and Output Modules you need for your Application

Seamless Solution

Everything in one System based on KNX and ETS

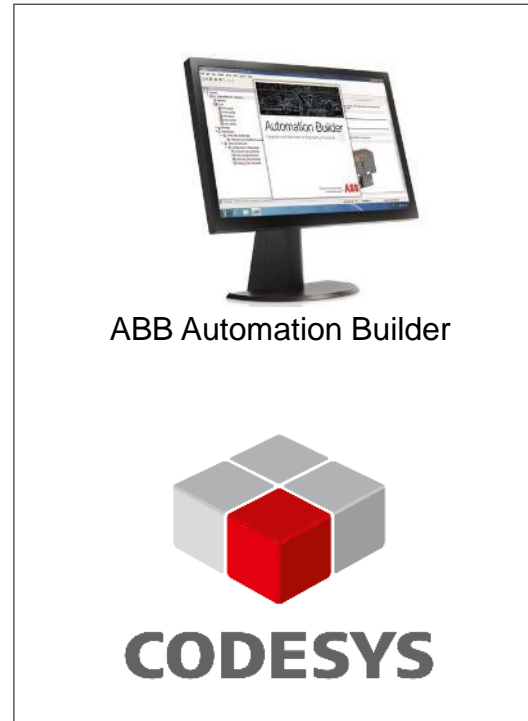

BAC/S 1.5.1 Building Automation Controller KNX

Introduction

Freely Programmable

- Advanced Programming based on standardized IEC 61131-3 Programming Languages in ABB Automation Builder based on established CODESYS Software
- Easy reuse of your existing CODESYS based Projects
- Easy use of 3rd Party IEC 61131-3 Automation Software Libraries

BAC/S 1.5.1 Building Automation Controller KNX

Introduction

KNX

- Seamless Solution from Automation Controllers to Room Automation. No Gateways and Integration Effort required
- Integrated in KNX and ETS
 - Built-in KNX Interface based on KNXnet/IP (Ethernet) to connect to the KNX IP-Router Backbone
 - The BAC/S is a standard KNX Device with Group Objects in ETS and physical KNX Address
 - Direct data exchange between the Engineering Software ABB Automation Builder and ETS
- Availability: October 2018

The screenshot shows the ABB website for ClimaECO. At the top is the ABB logo and navigation links: HOME, OFFERINGS, LOW VOLTAGE PRODUCTS, HOME AND BUILDING AUTOMATION, and ABB i-BUS KNX. A 'GLOBAL SITE' dropdown menu is also visible. Below the navigation is a large image of a man in a white shirt holding a tablet in front of a modern building. The main heading is 'HVAC solution ClimaECO', followed by the subheading 'Intelligent HVAC solutions inside ABB i-bus® KNX'. A paragraph describes the solution as efficient heating, ventilation, and air conditioning in one system, based on ABB i-bus KNX. Below this is a section titled 'Our offering' with three images: 'Central HVAC automation' (showing industrial equipment), 'Management & Automation' (showing a control room with multiple monitors), and 'HVAC room automation' (showing a modern living room). The 'Benefits' section follows, featuring six icons and their corresponding descriptions: 'Simple data transport' (network icon), 'Cost reduction' (downward arrow icon), 'Technology simplified' (thumbs up icon), 'Energy efficiency' (bar chart icon), 'Secure investment' (shield icon), and 'Sales channel commitment' (handshake icon).
