

HEIDELBERG, NOVEMBER 2023

ABB EQmatic Energy Analyzer QA/S x.yy.1

KNX, M-Bus and Modbus – Building Academy Smart Buildings

Thorsten Reibel & Juergen Schilder

Agenda

Introduction

Basic

- Planning
- Installing
- Commissioning
 - Connecting to the device and commissioning wizard
 - Main menu “Management”
 - Main menu “System”
 - Main menu “Dashboard”
 - Main menu “Analytics”
 - Main menu “Load control”
 - ETS Parameter Energy Analyzer QA/S 1.16.1 KNX

Advanced

- Provide measured values (Modbus TCP and REST API)
- Data sharing via Modbus TCP to KNX (PLC Controller AC500 with integrated KNX interface, ABB Cylon®, Visualisation software, BMS, ...)

Introduction

ABB EQmatic Energy Analyzer QA/S x.yy.1

ABB EQmatic Energy Analyzer QA/S

Meter Interface Module ZS/S and EQmeters

Modbus RTU – KNX Gateway MG/S

KNX Energy Module EM/S and Energy Actuator SE/S

Switch Actuators SA/S Professional with Energy Functions

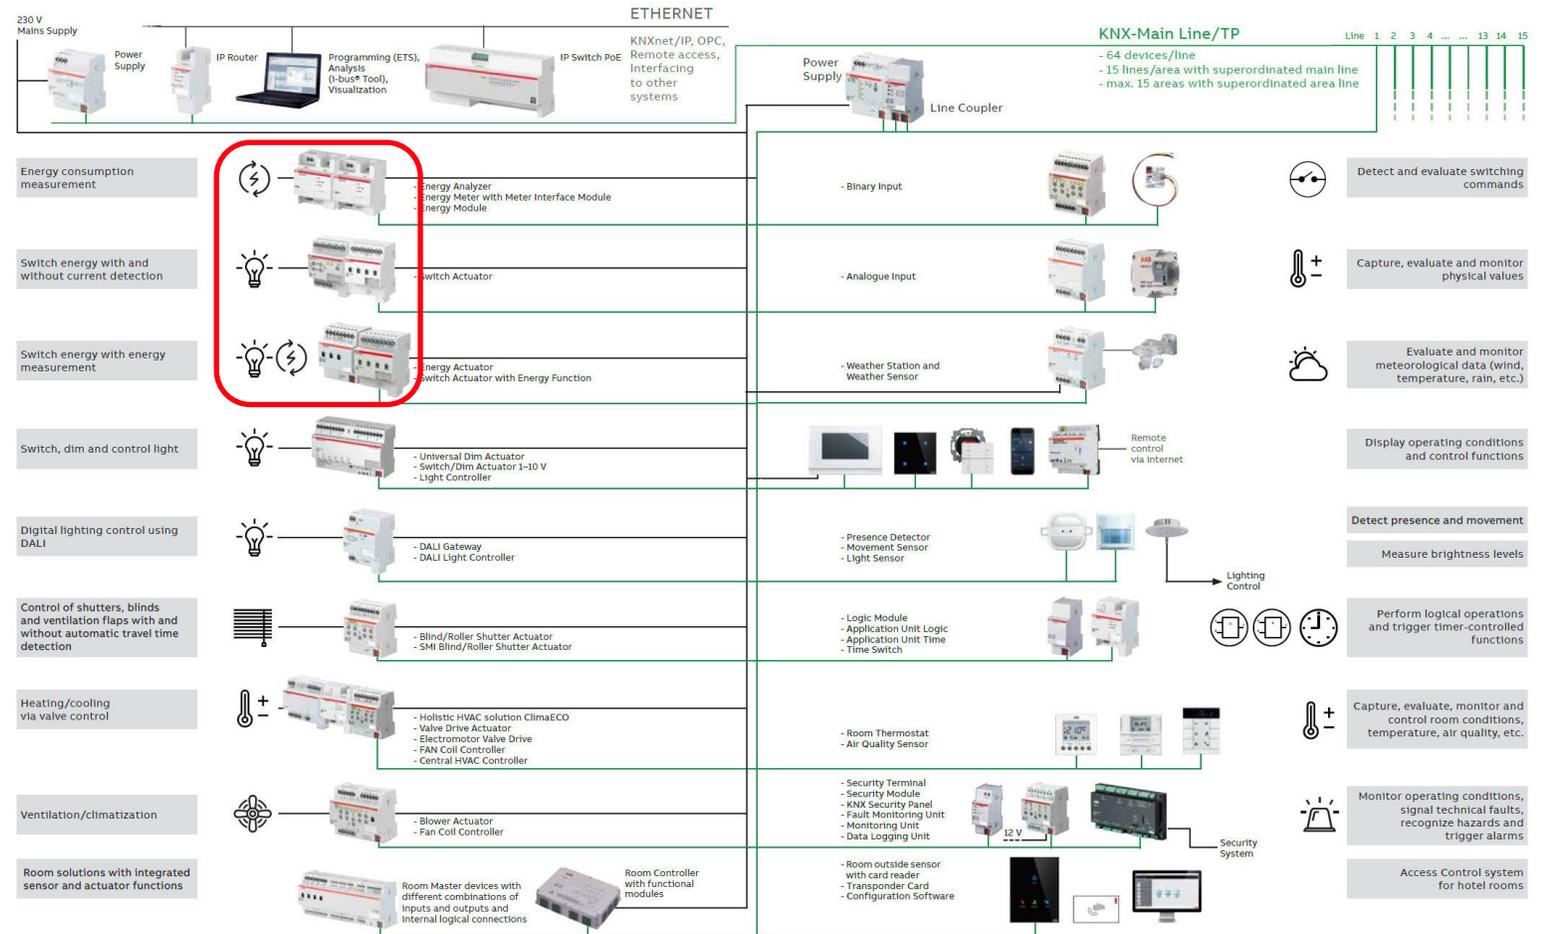

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Why measuring energy consumption?

- Internal billing
- Fair sharing of costs
- Implementation of energy management systems (ISO 50001)
- Sustainable construction (EN 15232 energy efficiency of buildings), energy label, sustainability certificate (Leed), ...
- Consumption becomes transparent
- Creation of incentives for cost savings
- Review of consumer behavior
- Change in consumer behavior
- Monitoring of the installation → Detection of “energy thieves”
- Approach to automation
- Load management
- ...

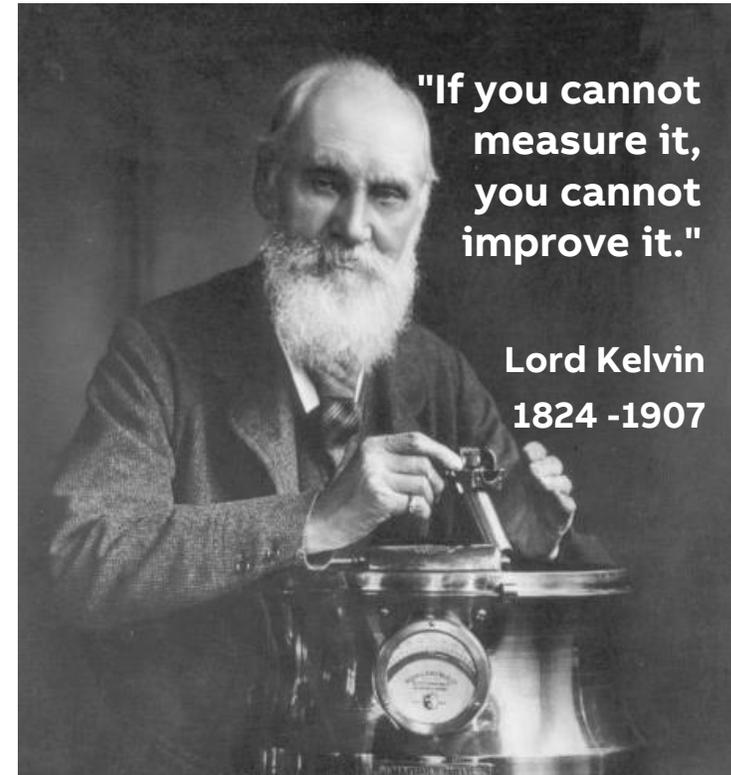

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

What is ABB EQmatic?

ABB EQmatic

- is a compact and web-based solution offering for applications in the segment of energy management/-efficiency
- enables customers to record, visualize and process sub-metering data
- is a simple, **ready-to-use solution** for recording, visualizing and analyzing energy and consumption data
- **closes the gap** between field devices (meters) and high-level software applications
- is designed for **Energy-/Facility Manager** or any other operator in **small and mid size commercial buildings**

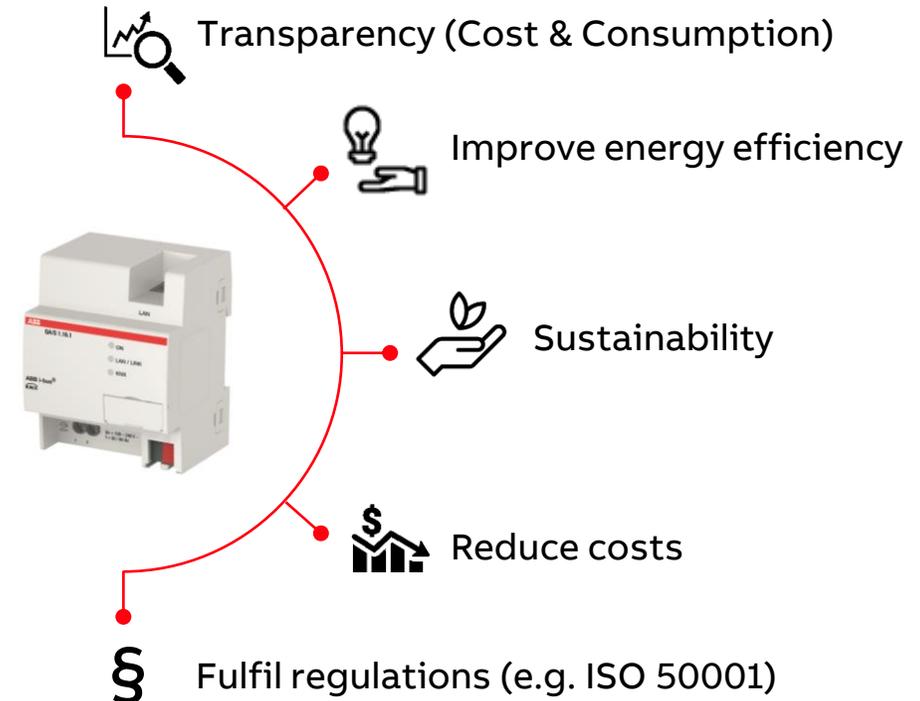

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

ABB EQmatic – ABB offers various solutions

Solution for recording, evaluation and displaying of different consumption and generation values (energy, heat, water, gas) with Energy Analyzer QA/S

Solution for providing measured values with KNX Meter Interface Module ZS/S & EQmeters and Modbus RTU – KNX Gateway MG/S

Decentral solution of energy measurement in a load circuit with KNX Energy Module EM/S, Energy Actuator SE/S and Switch Actuator SA/S Professional Range with Energy Functions

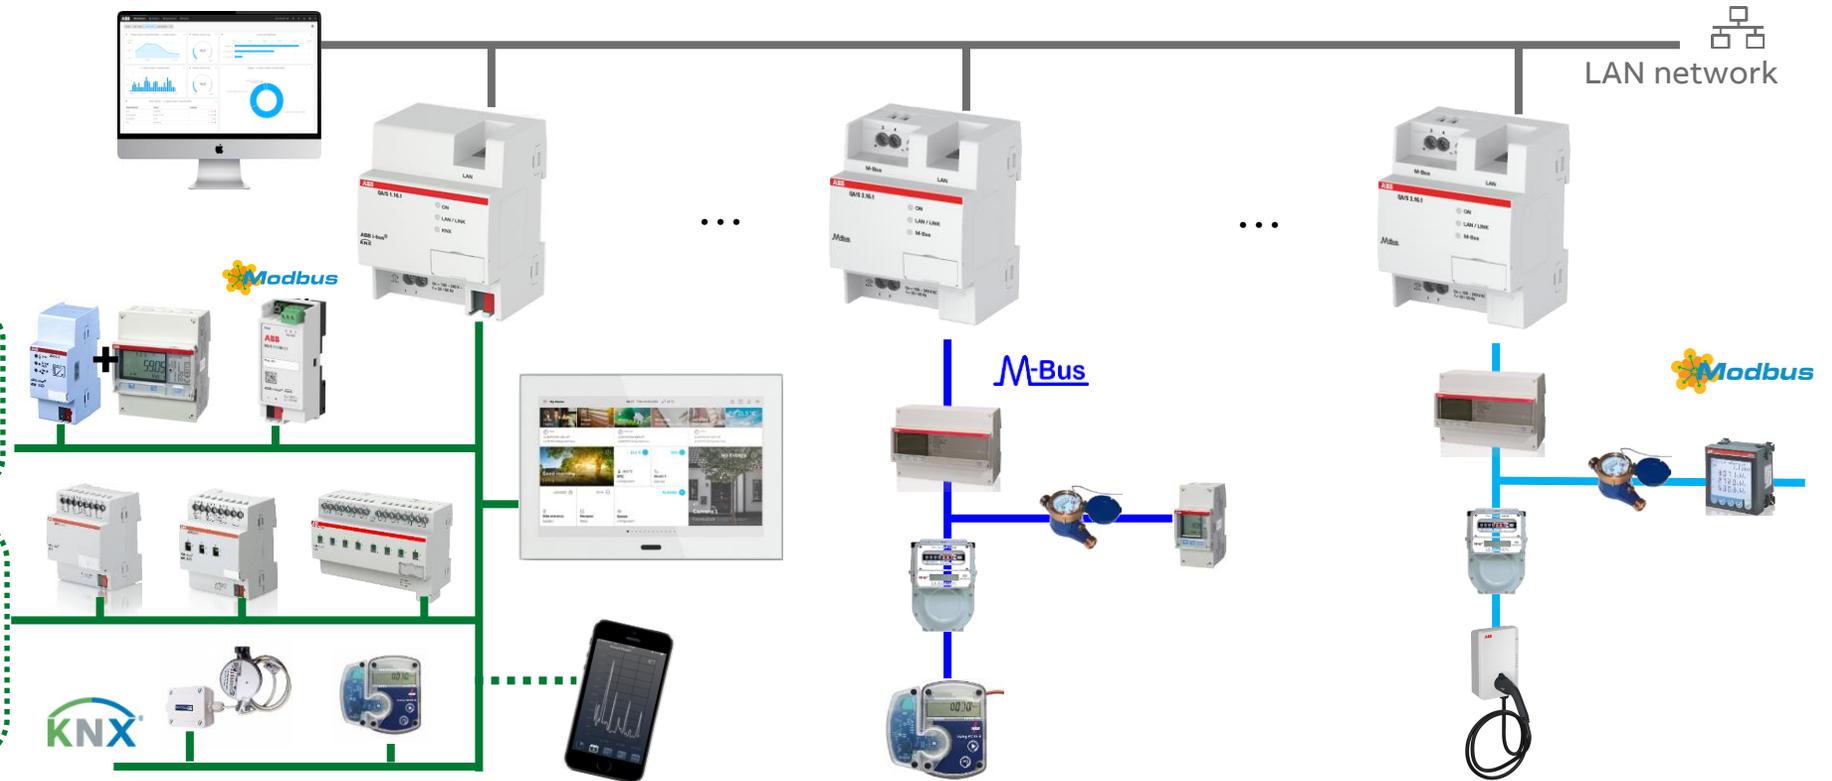

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Switch Actuator SA/S Professional Range with Energy Func.

- High-switching-capacity devices with extended functionality for industry standard applications
- Main features:
 - 2 / 4 / 8 / 12 outputs
 - 16/20A C-Load (high capacity)
 - Manual operation (voltage independent)
- Same functionality like Switch Actuators professional but with **additional Energy Functions**
 - Measurement of current per channel
 - Calculation of power out of fixed or dynamic voltage and power factor (each with group object to receive changed values)
 - Calculation of energy consumption out of power multiplied with time
 - Evaluation of load regarding thresholds, up to 6 or single ranges can be enabled

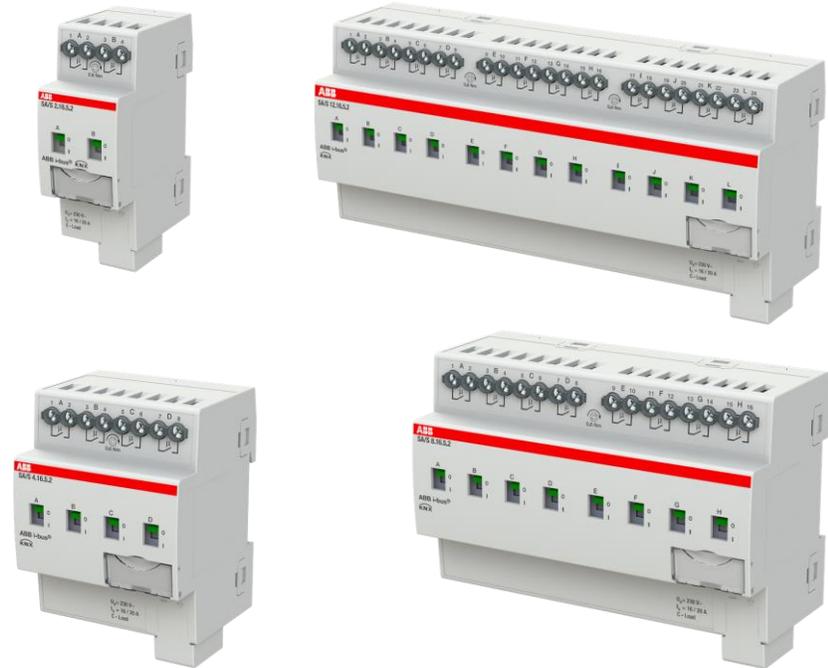

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

KNX Energy Actuator SE/S 3.16.1

- The ABB i-bus® KNX Energy Actuator SE/S 3.16.1 is a Switch Actuator that records the energy consumption of the connected electrical loads in the building
- The Energy Actuator determines the active energy consumption per switching output
- Furthermore, it provides the total consumption of all three outputs
- All meter values can be sent cyclically, on request or when a start or stop event has occurred such as a time, operating period or when a defined consumption threshold is reached
- Additionally, when a stop event occurs, the assigned output can be switched off

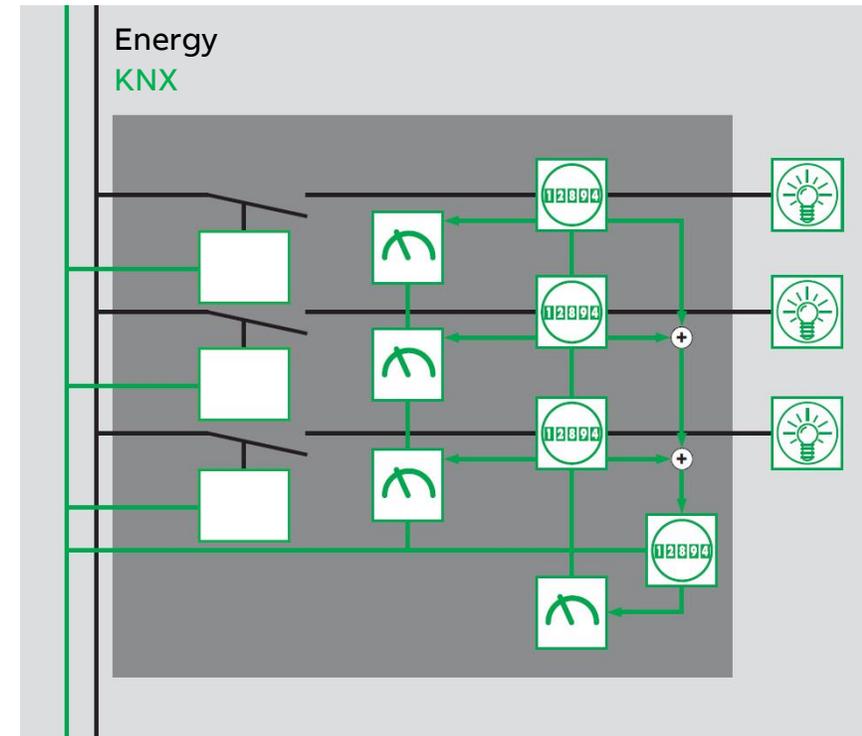

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

KNX Energy Actuator SE/S 3.16.1

- For each channel, the active power, current and voltage as well as further electrical variables (apparent power, crest factor, power factor and frequency) can be measured
- The measured values are made available via KNX
- They can be monitored with threshold values
- Should an overshoot or undershoot of a defined threshold occur, a warning can be sent or a channel switched
- The ETS application also enables a simple load management functionality, where up to ten Energy Actuators can be interconnected
- The electrical loads connected to the three floating switch outputs can be switched via the KNX or switched manually directly on the device

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

KNX Meter Interface Module ZS/S

- Electronic energy meters make the current energy values available on the KNX bus system in conjunction with a KNX interface (remote meter reading via KNX)
- Consumption and measured values of electrical energy meters are collected via the Meter Interface Module ZS/S 1.1 and transferred via the ABB i-bus KNX
- The device features an infrared interface which is used to read the data from ABB energy meters
- The measured data can be intermediately stored, evaluated and visualized from here
- The information and data which is read can be used for example for billing purposes, energy optimisation, visualisation or monitoring of installations

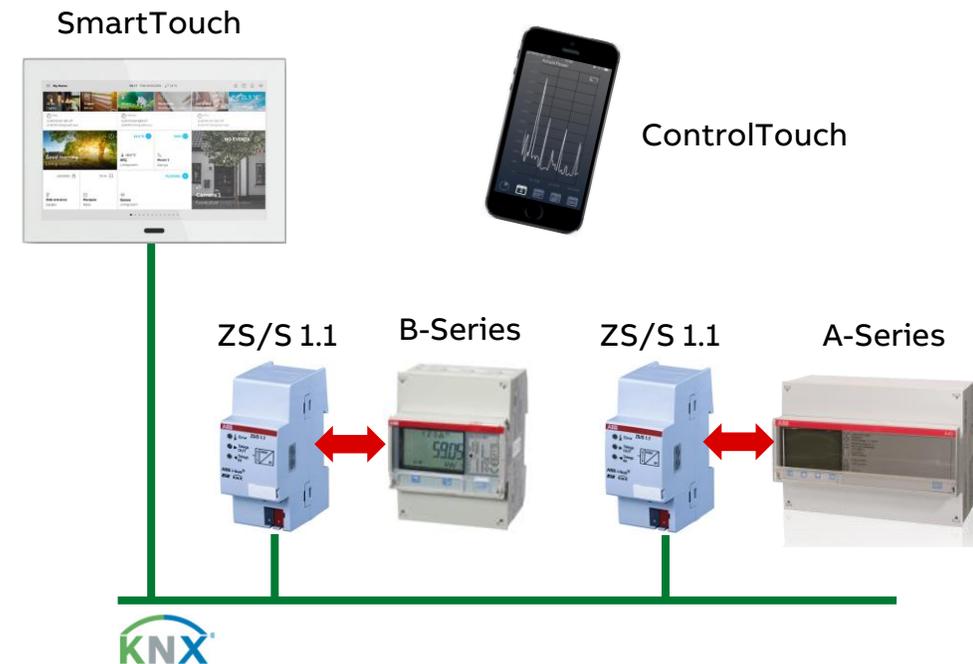

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Modbus KNX Gateway MG/S

- The Modbus KNX Gateway works as a Modbus RTU client and makes it easy to integrate Modbus devices (server) via RS-485 into a KNX system
- This way, the KNX system perceives the entire Modbus installation as if it were another KNX device of the system
- The gateway is a compact modular installation device
- The Modbus KNX Gateway is a bidirectional gateway with 100 freely configurable data points
- For this purpose, the gateway continuously polls the Modbus devices and assigns the Modbus data points to KNX
- Furthermore, commands are sent from KNX to Modbus
- Modbus-KNX mapping templates are available for download from a database
- Links: [→ Webinar recording](#) [→ Webinar presentation](#)

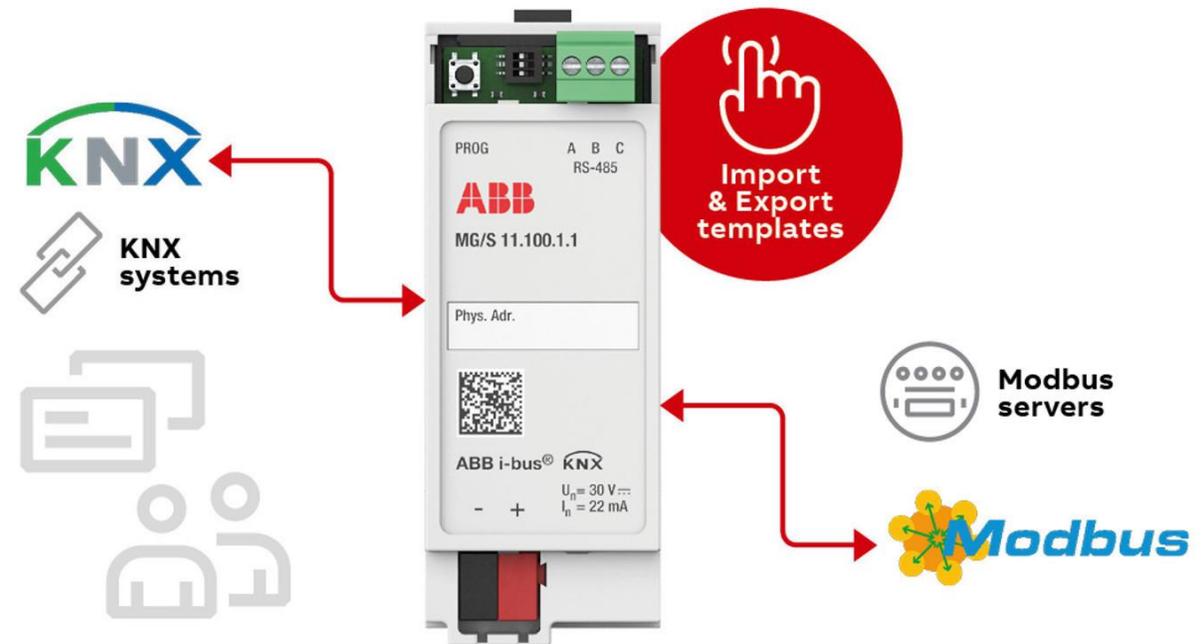

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Modbus KNX Gateway MG/S

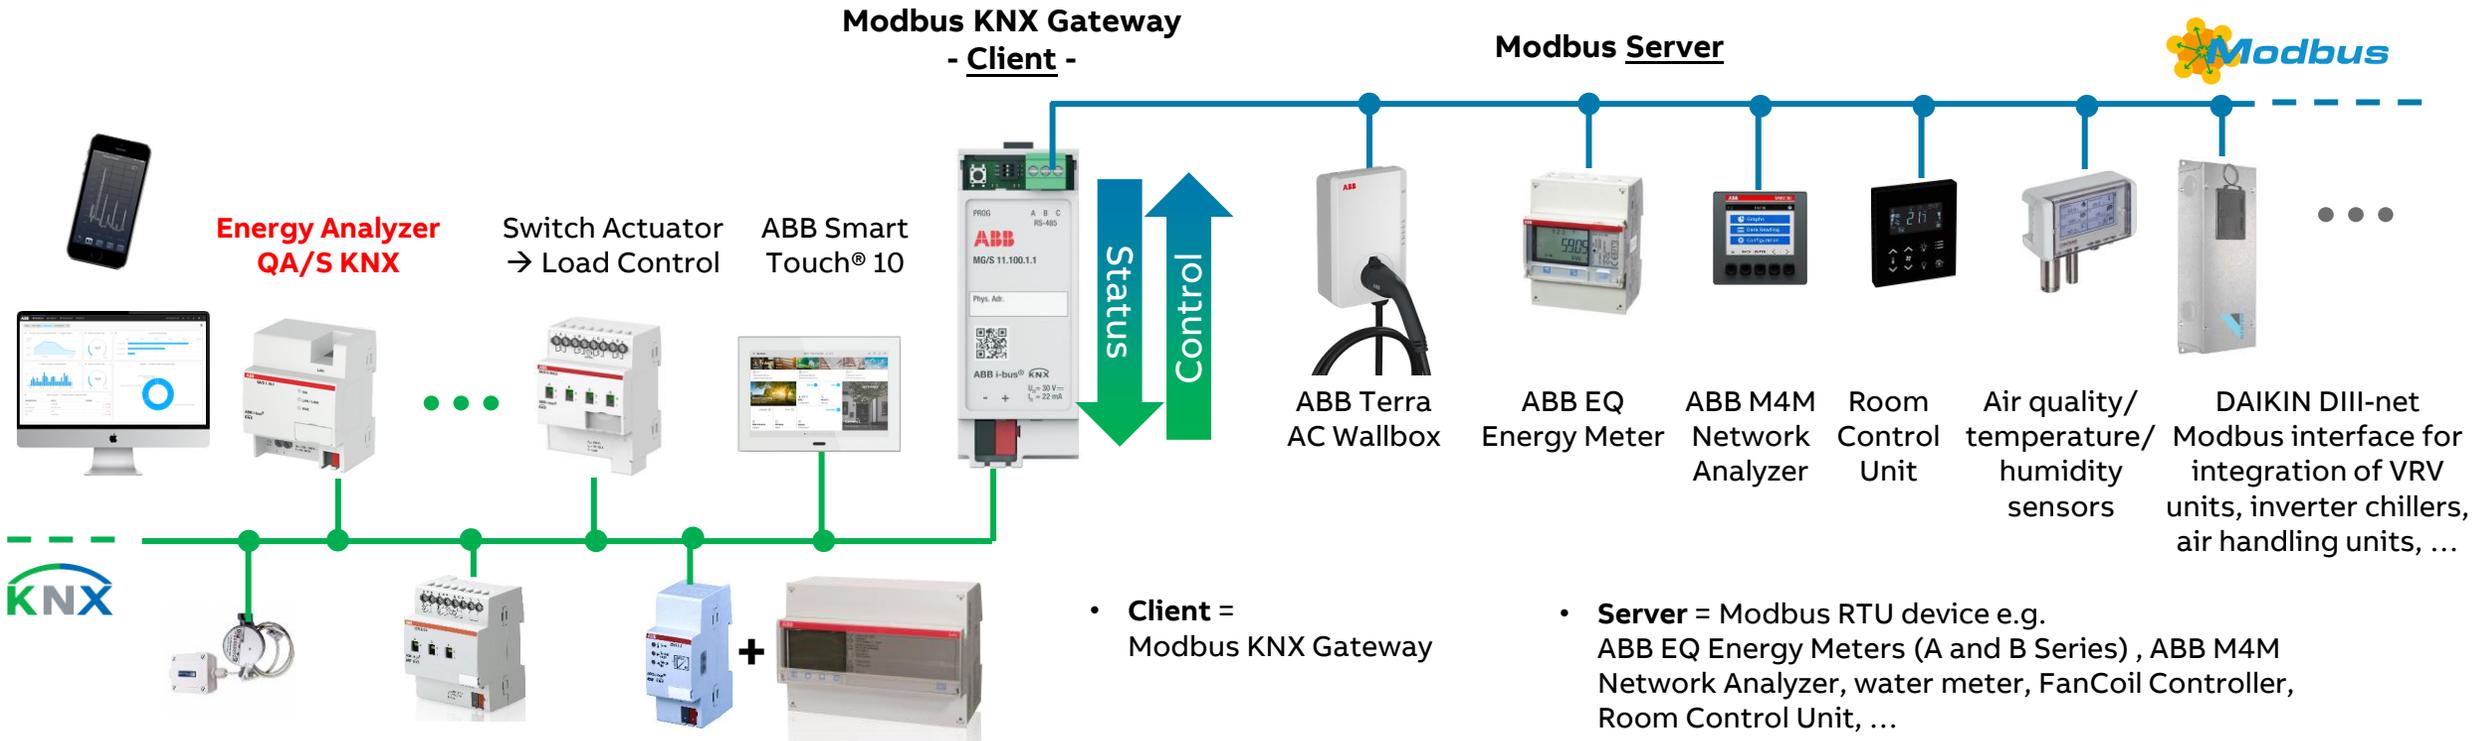

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Energy measurement

- The recording of energy variables and values, as well as their processing, is continually gaining in significance
- This is not just due to the rising energy costs but also due to the frequently demanded evaluation and reading possibilities via a decentralized reading station
- The features of the ABB EQmatic series help to meet these requirements and can provide operators and users with convenient, cost-effective solutions for modern energy management
- ABB offers a wide range of devices and solutions specially designed for these applications

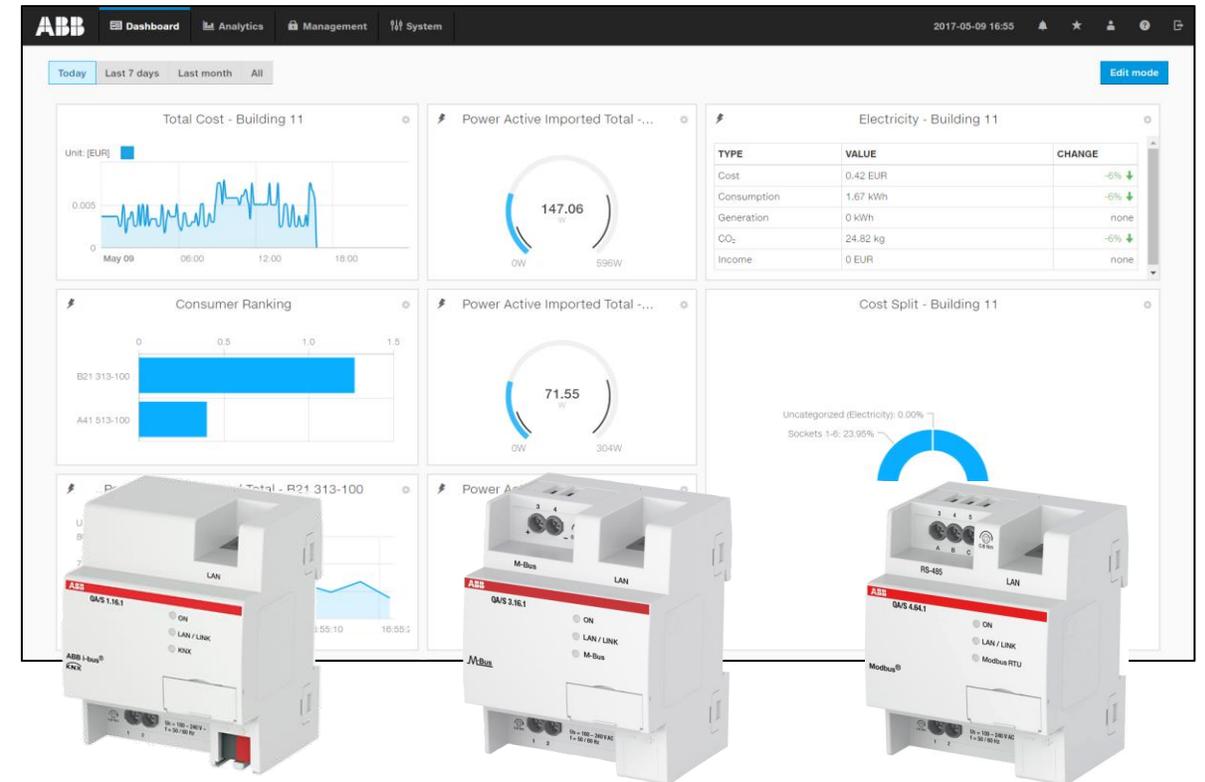

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

ABB EQmatic

- ABB EQmatic series devices are compact modular installation devices designed to monitor and display consumption and measured values
- They log and store consumption data for electricity, gas, water or heat meters

- This means that they can help those operating purpose-built premises or commercial buildings (offices, hotels, schools, public buildings) to implement energy management systems such as ISO 50001 or to put in place low-voltage installations compliant with VDE 0100-801
- As a result, they make building energy flows and costs transparent

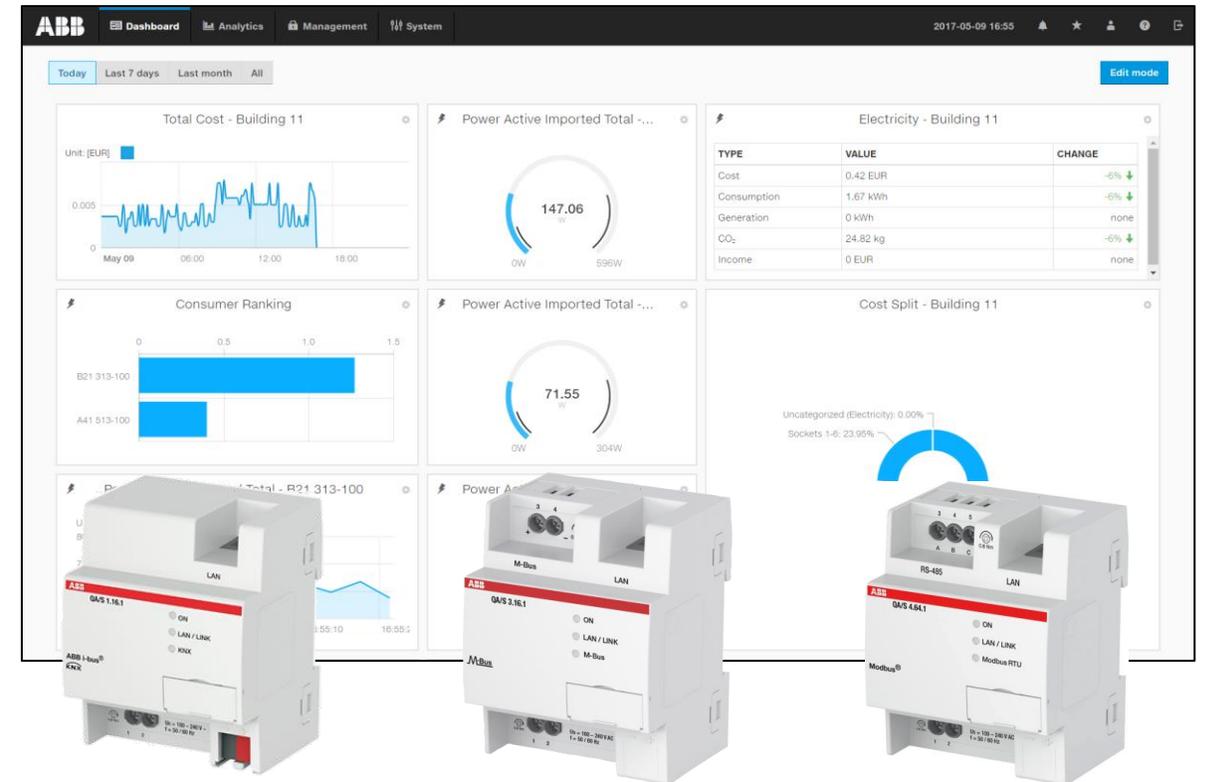

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Device technology

ABB EQmatic Energy Analyzer QA/S collects data from

- ABB i-bus® KNX meters and sensors
- M-Bus meters
- Modbus RTU meters

Functions

- The user interface is accessed via a web browser
- Display and evaluation of historical consumption and measurement data
- Cost & consumption analysis for electricity, water, heat, gas
- Storage of meter data for at least 3 years
- Cyclical (e.g. monthly) export of reports to FTP servers or email
- Transfer of data to higher-level systems via Modbus TCP or Rest API e.g. BMS, Visualisation, ABB Cylon®, SCADA, PLC Controller AC500 with integrated KNX interface , ...

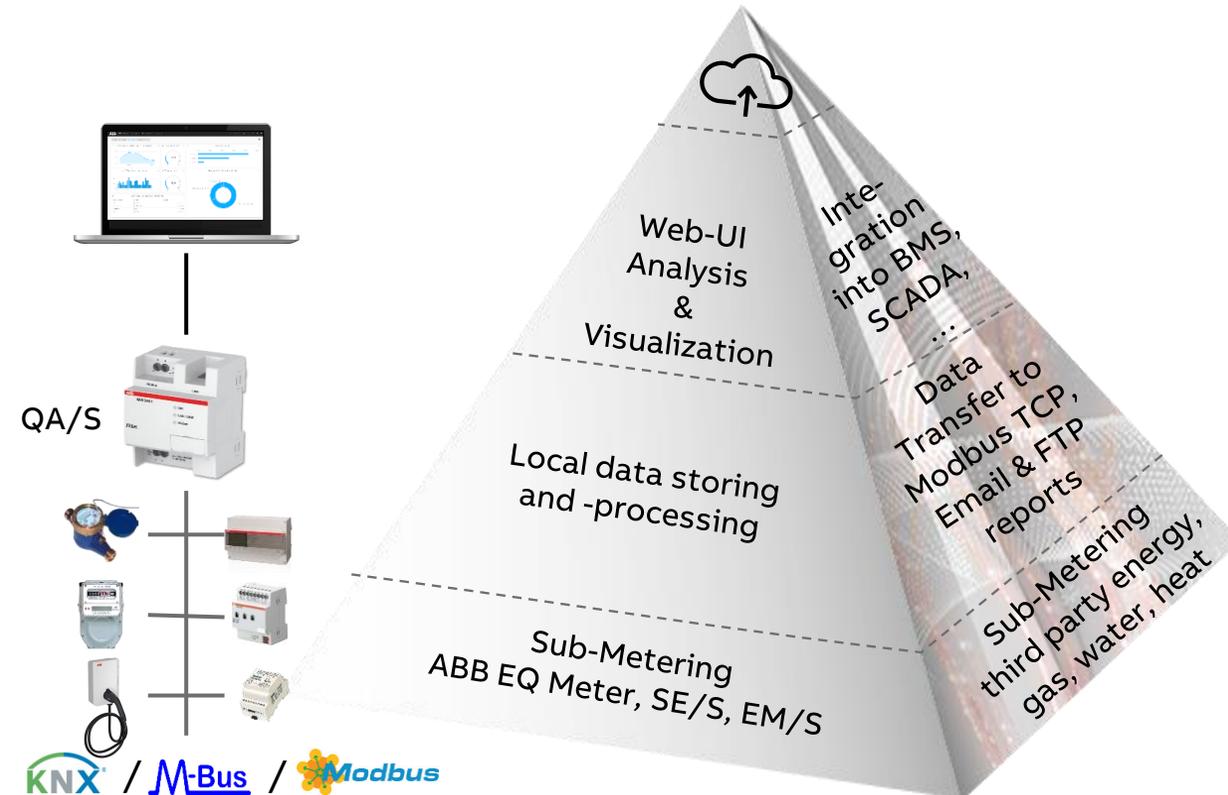

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Device technology

- ABB EQmatic Energy Analyzer are compact, web-based standalone devices for energy management applications
- They log, store, display and analyze consumption data for up to 16 or 64 electricity, gas, water or heat meters
- Device access is via web browser (integrated web server)
- They automatically detect ABB A and B Series Energy Meters and M2M Modbus Network Analyzer during commissioning
- Third party meters (water, gas,...) or pulse adapters must be manually configured and added to the system

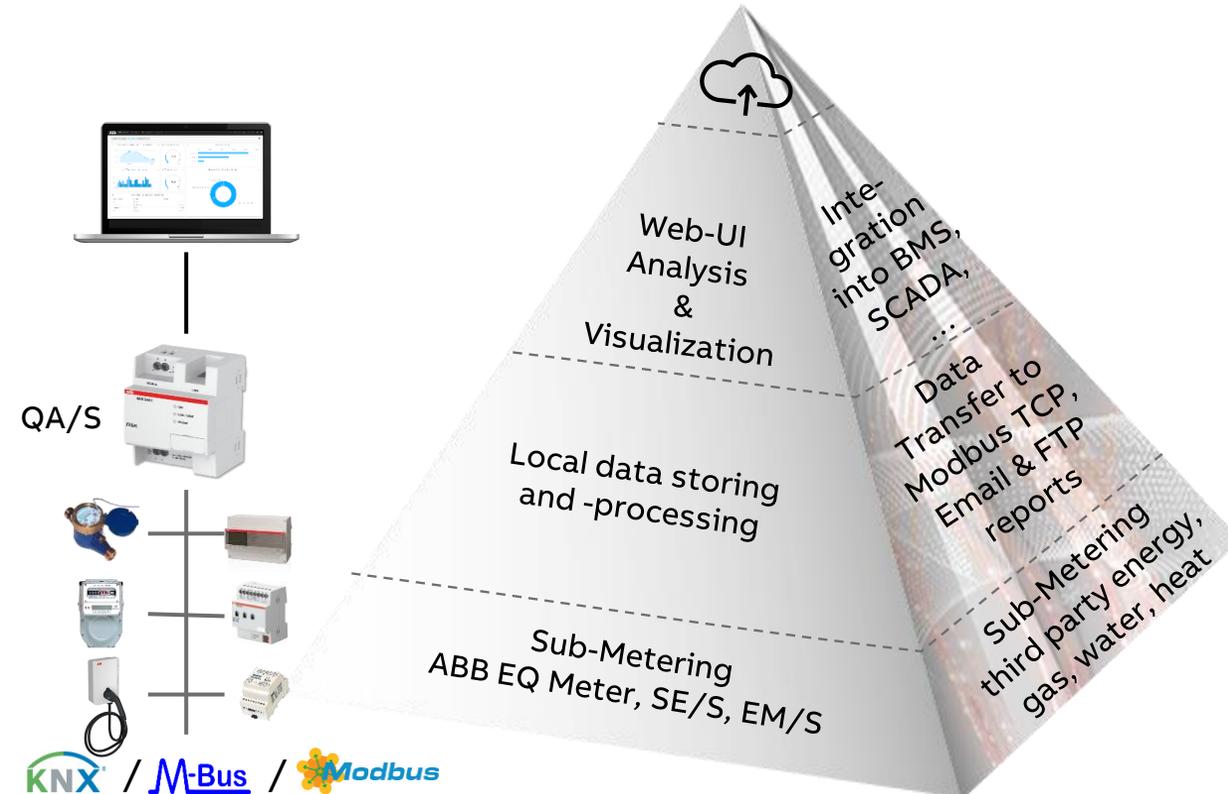

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Energy Analyzer QA/S as local and central data logger

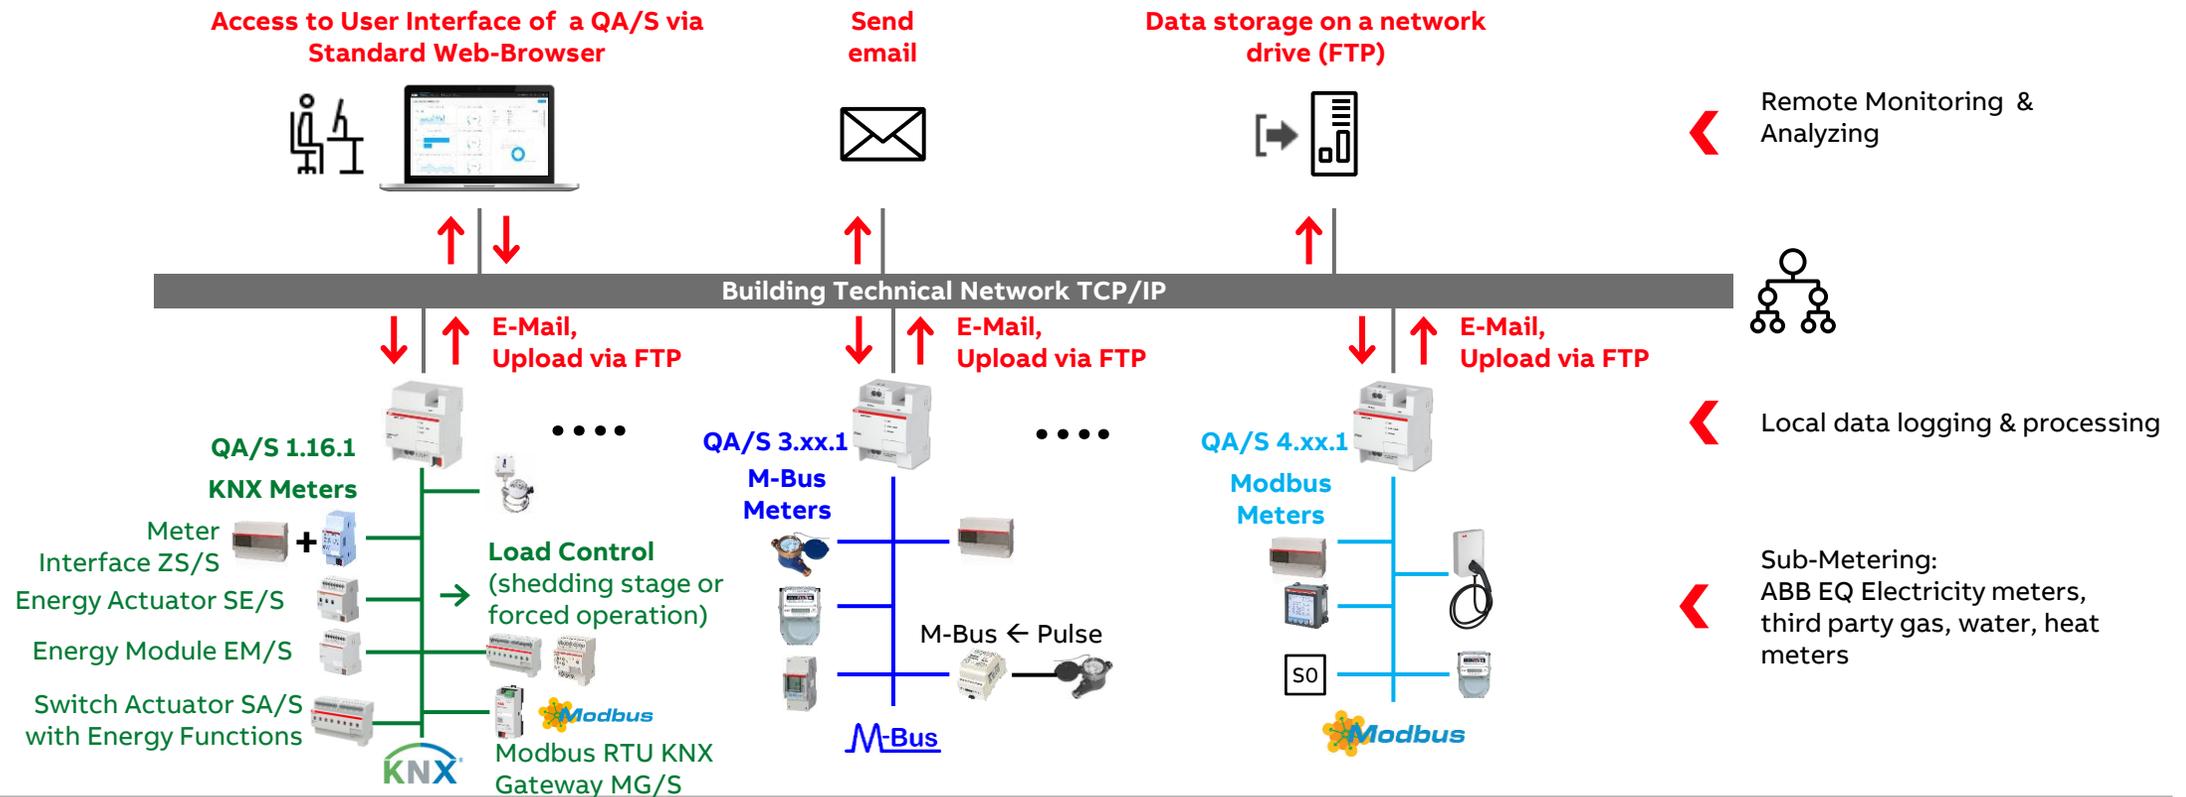

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Data sharing via Modbus TCP & REST API – QA/S as a Gateway between field devices and super ordinate system

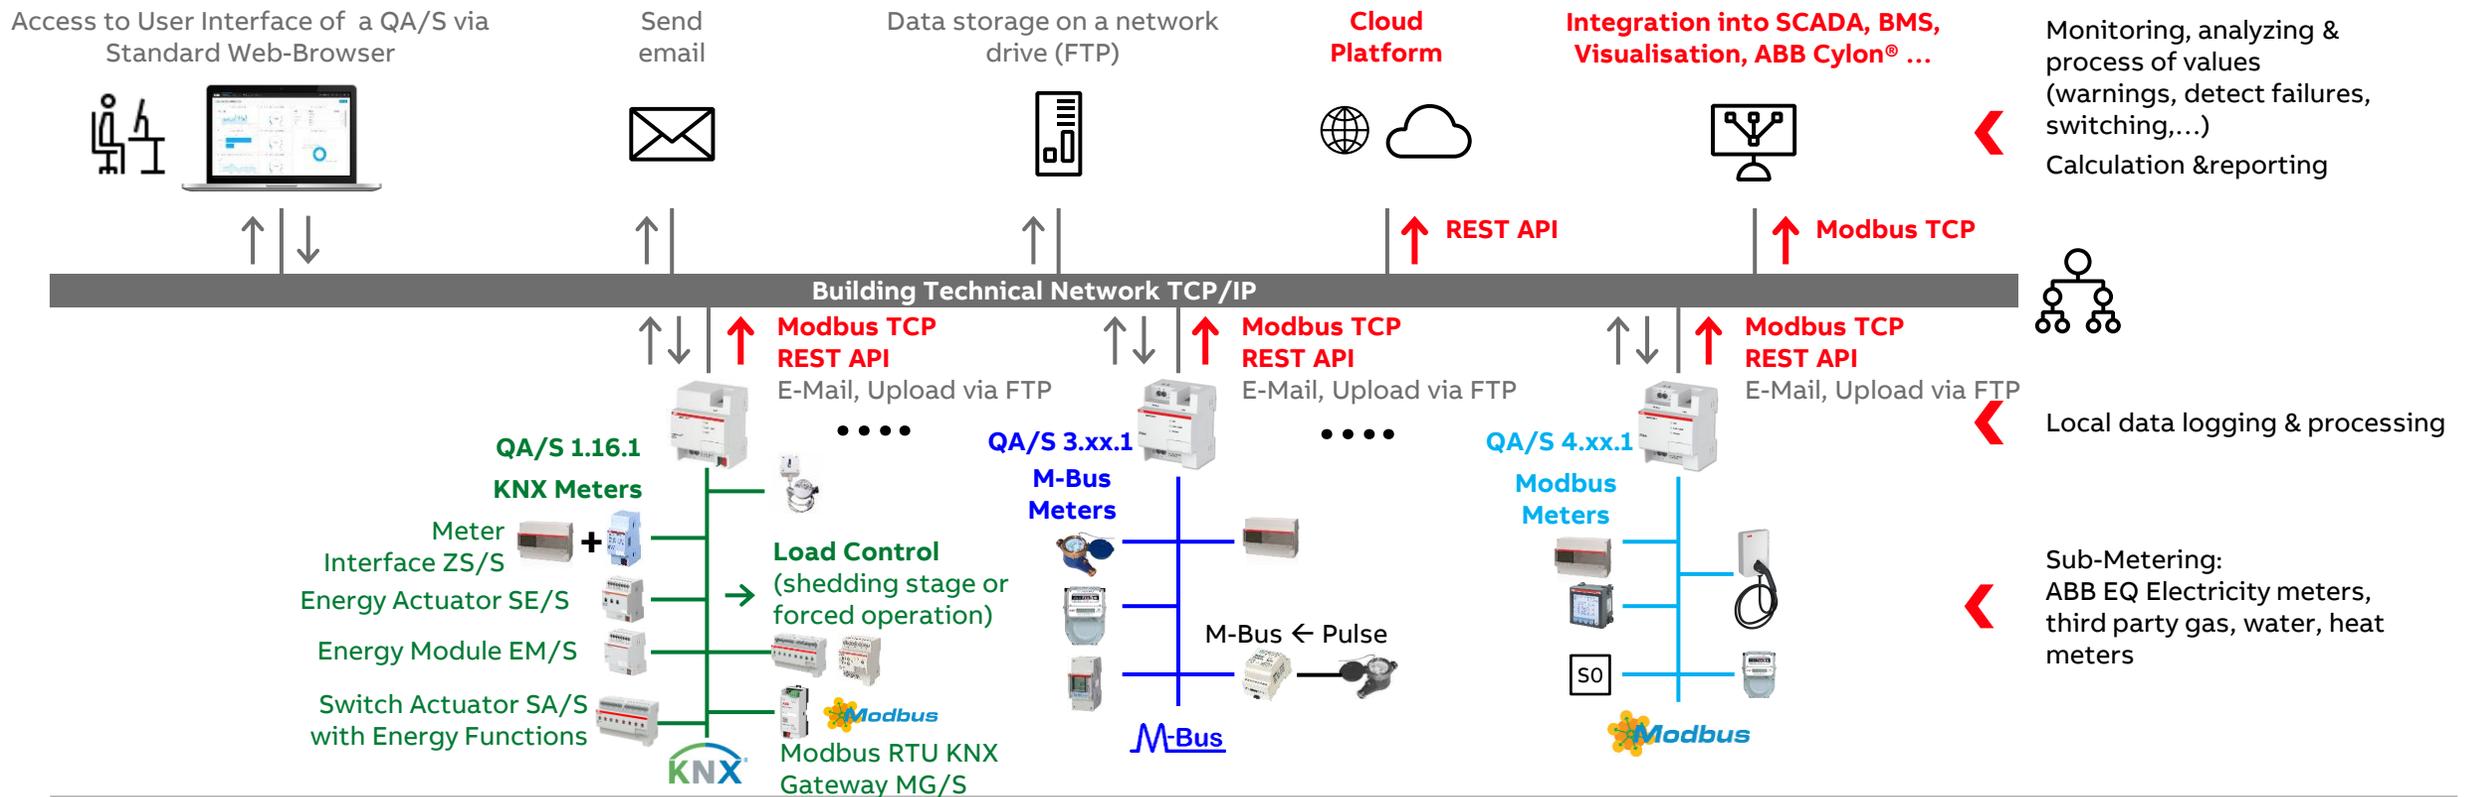

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Data sharing via Modbus TCP, conversion via a KNX interface and forwarding to KNX

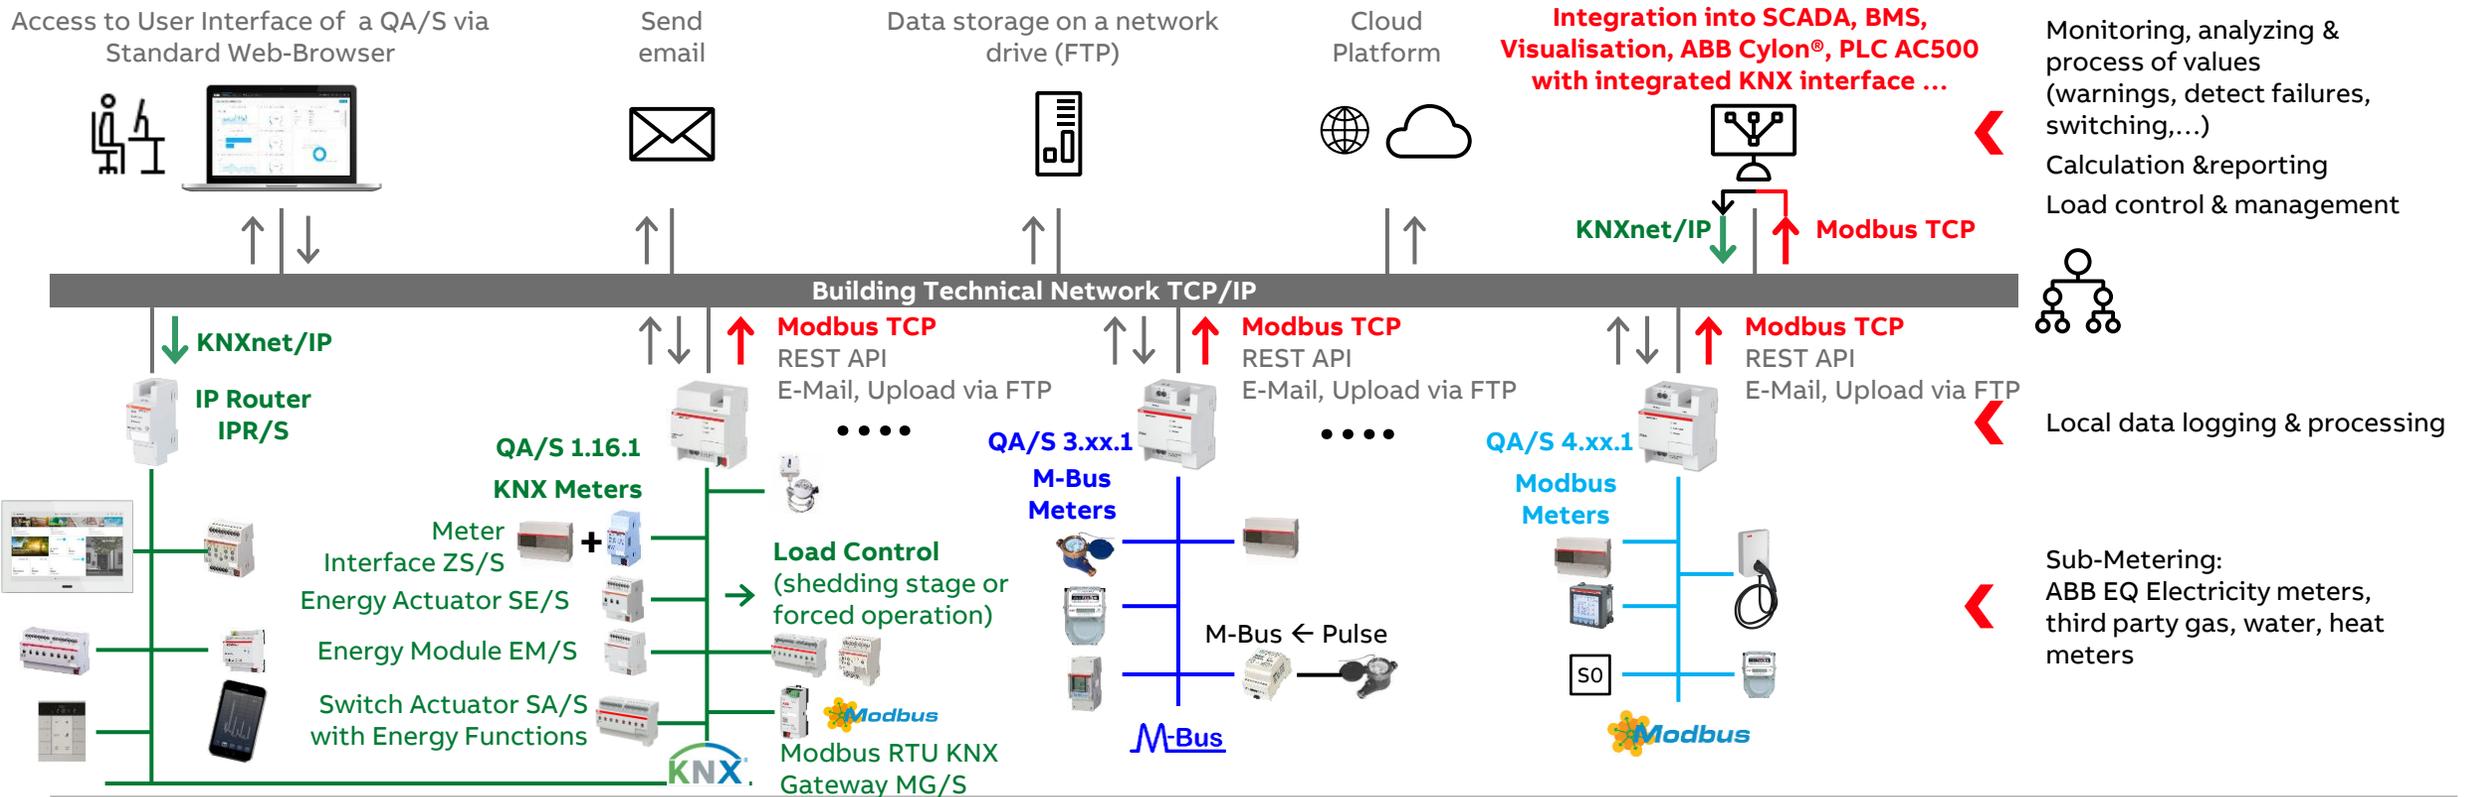

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

ABB Energy Meters – A and B Series

- The ABB EQ Energy Meters are designed as intermediate meters and offer a wide range of functions for countless applications
- The meters are available in various variants: Meters for single- or three-phase measurement, as well as meters for direct connection or transformer rated
- The energy meters are optionally available with integral serial interfaces for M-Bus or Modbus RTU (RS485)
- The ABB A and B Series Energy Meters and M2M Modbus Network Analyzer are automatically detected and configured during commissioning

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Connection of a meter to the M-Bus

- Meter with built-in M-Bus interface
 - ABB EQ Energy Meters (A and B Series) are optionally available with integral serial interfaces for M-Bus or Modbus RTU (RS485) and detected and configured automatically
 - Third-party meters are to be parameterized during commissioning
- Meter with pulse output
 - Pulse adapter for M-Bus
- Meter for connecting a pulse output module
 - Pulse adapter for M-Bus
- Meter for connecting a bus module
 - M-Bus module

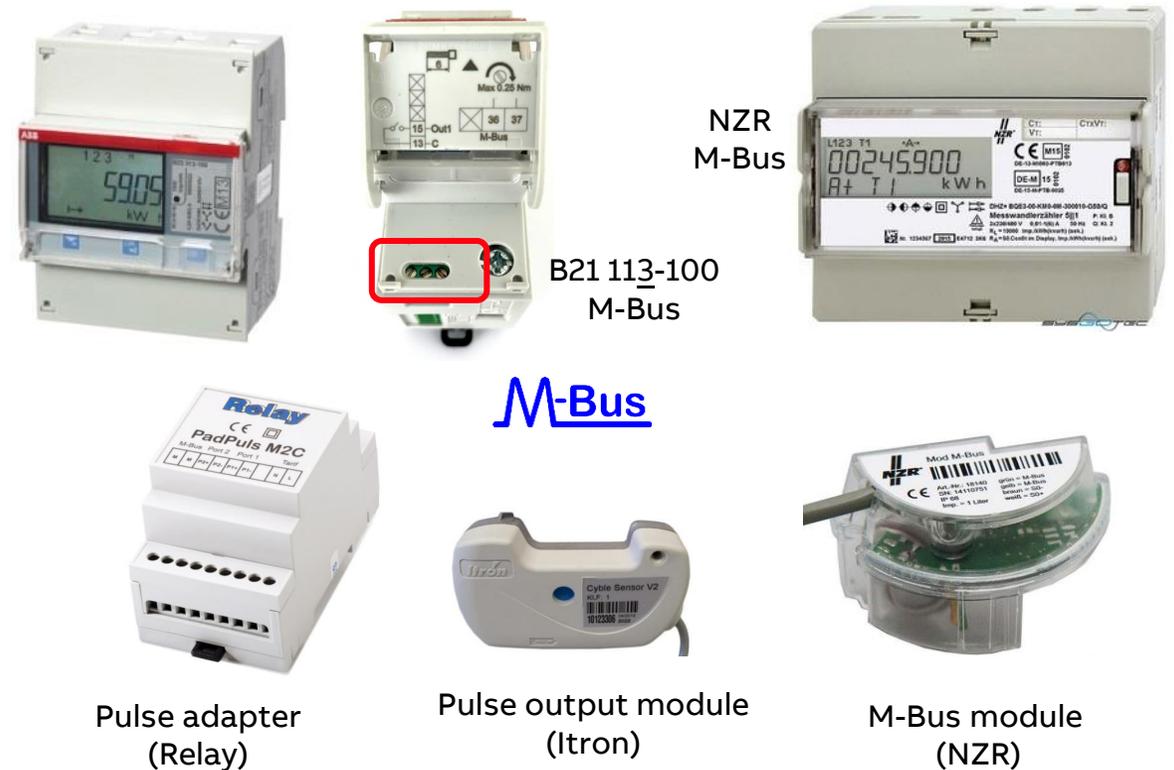

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

M-Bus module for a meter

- The M-Bus module is used for adaptation of meters to the M-Bus system, e.g. water meter
- When connected to the M-Bus network the module is energized
- A built-in battery ensures that metering despite sustained failure of the M-Bus network; the resulting is stored in non-volatile Flash info of the processor
- Manufacturer: NZR (Germany)
<https://www.nzr.de/en/home.html>

M-Bus

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

M-Bus module for a meter

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Pulse module for a meter and pulse adapter for M-Bus

Pulse output module

- The pulse output module generates pulses (e.g. 1 pulse per 10 liter) similar to those generated by reed relays (dry contact)

- Manufacturer: Itron

<https://www.itron.com/emea/solutions/product-catalog/cyble-sensor>

M-Bus pulse adapter

- The pulse adapter allows the use of a meter or module with pulse output as a M-Bus slave
- So for example, data from a simple gas, water or energy meter can central be read out by M-Bus

- Manufacturer: Relay

<https://www.relay.de/en/>

M-Bus

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Device technology – software

- Display and evaluation of historical consumption and measured data via configurable charts
- Cost and consumption analysis for media such as electricity, water, heat and gas
- Display of CO₂ emission and Energy Performance Indicator (EnPI)
- Storage of metering data from up to 16/64 meters for at least 3 years
- Data export (file, e-Mail, FTP, Modbus TCP)
- User addition and administration functions (simultaneous access for up to 10 users)
- Notifications when connected meters fail
- Alarms
- Load control (only for KNX)
- Environmental sensor data (only for KNX)

QA/S 1.16.1

QA/S 3.xx.1

QA/S 4.xx.1

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Device technology – hardware

- Energy Analyzer QA/S 1.16.1 KNX
 - QA/S 1.16.1 max. 16 meters
- Energy Analyzer QA/S 3.xx.1 M-Bus
 - M-Bus master to DIN EN 13757-2
 - QA/S 3.16.1 max. 16 meters
 - QA/S 3.64.1 max. 64 meters
- Energy Analyzer QA/S 4.xx.1 Modbus
 - Modbus RTU master
 - QA/S 4.16.1 max. 16 meters
 - QA/S 4.64.1 max. 64 meters
- Modular installation device (MDRC)
- Mounting width: 4 space units
- Display elements (LEDs)
- LAN connection
- Supply voltage 100...240 V AC

QA/S 1.16.1

QA/S 3.xx.1

QA/S 4.xx.1

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

User interface: Main menu

- The device has a user interface for commissioning and operating purposes
- To access the user interface there must be an IP connection to the device
- The user interface offers
 - A configurable dashboard
 - Graphical analysis functions (historical data, benchmark - time interval, instantaneous values, ...)
 - Management
 - System settings
 - Load control (only for KNX)

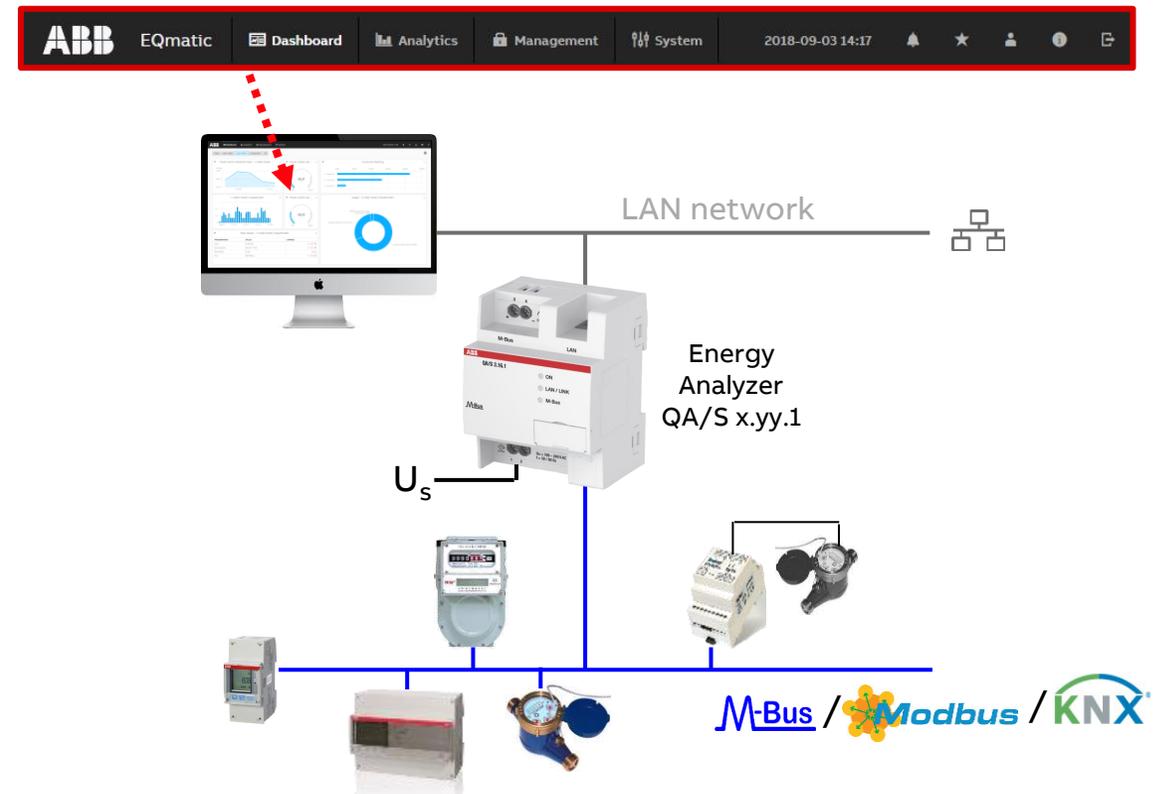

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Main menu: Dashboard

- The dashboard provides a rapid overview of costs and consumers in the building
- In the dashboard you can configure user-defined views using widgets (graphical display elements) and alarms (e.g. measured value is exceeded)

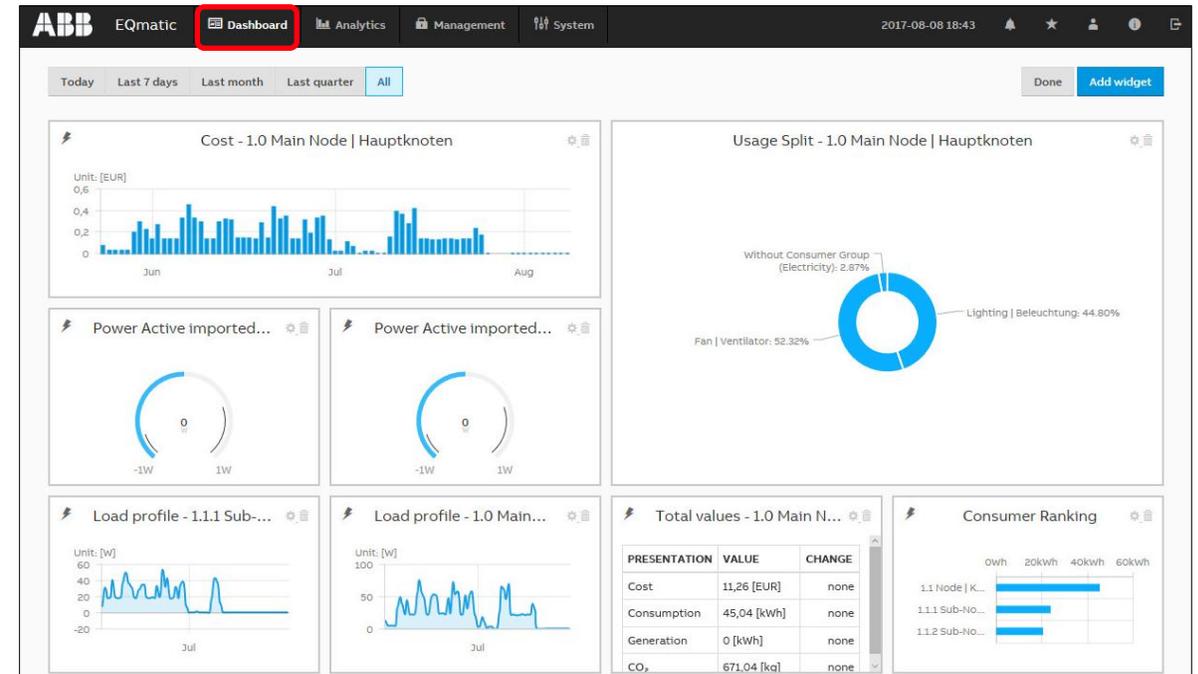

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Main menu: Analytics – Instantaneous Values

- This function displays the instantaneous value of a single data point in real time
- The desired metering point or meter must first be selected in the metering structure
- Depending on the meter's scope of functions, various data points are available for display

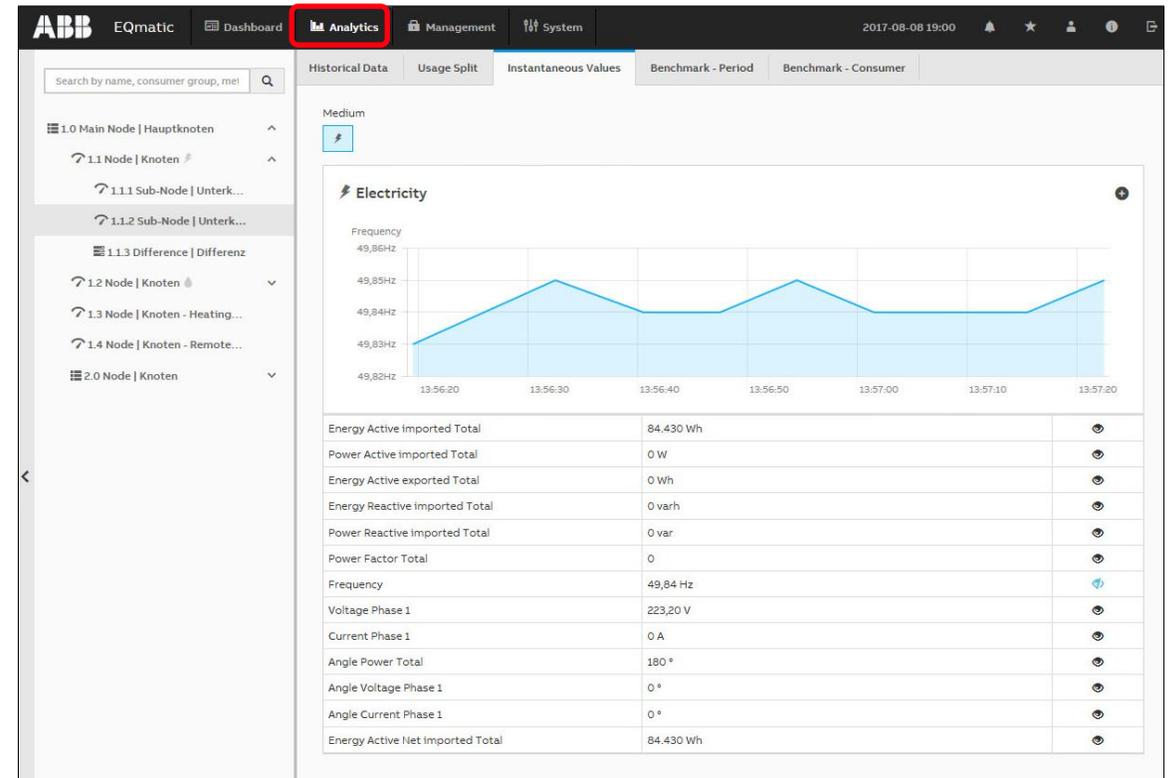

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Main menu: Analytics – Historical Data

– For analysis and display of historical measured data

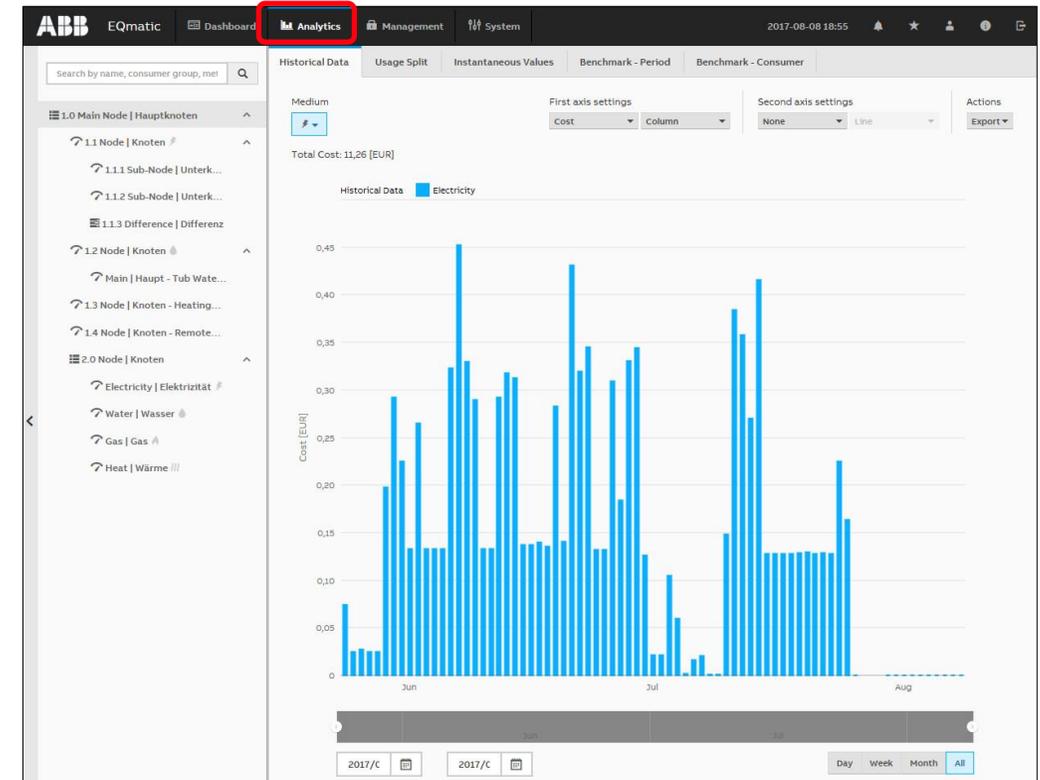

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Main menu: Analytics – Usage

- For analysis and display of
 - Cost
 - Consumption
 - Generation
 - Income
- ...
- per medium or consumer group
 - Lighting
 - Cooling
 - Ventilation
- ...

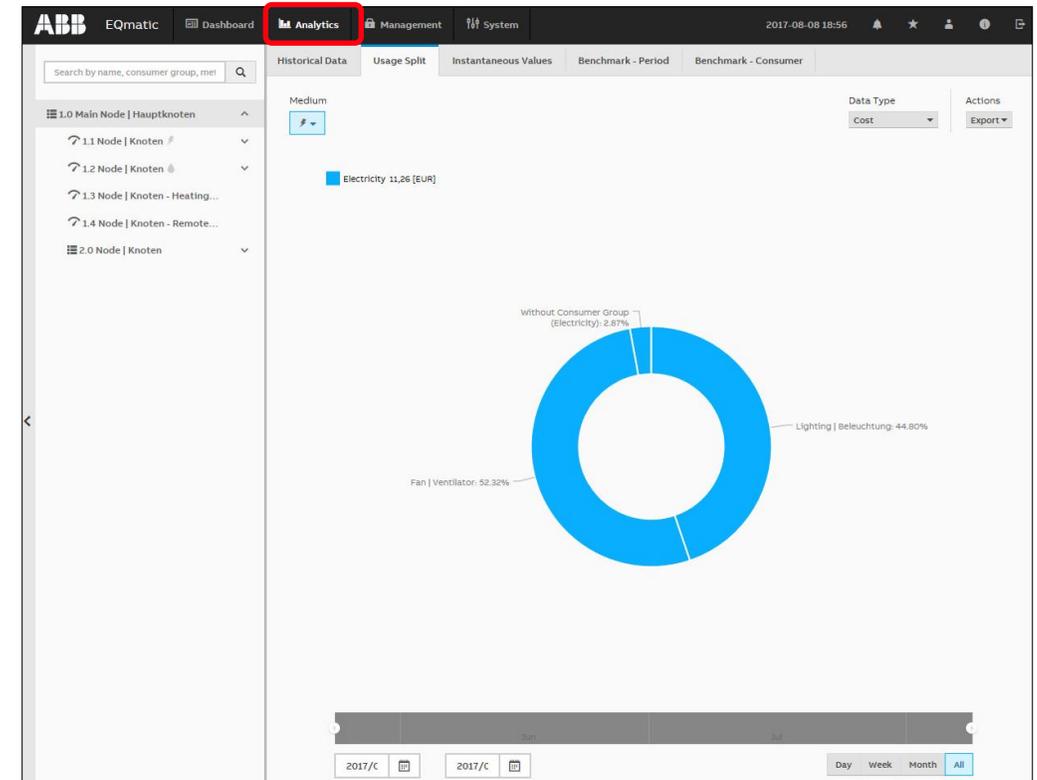

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Main menu: Analytics – Benchmark Period

- To compare a consumer or node referred to two time intervals (e.g. current month and previous month)

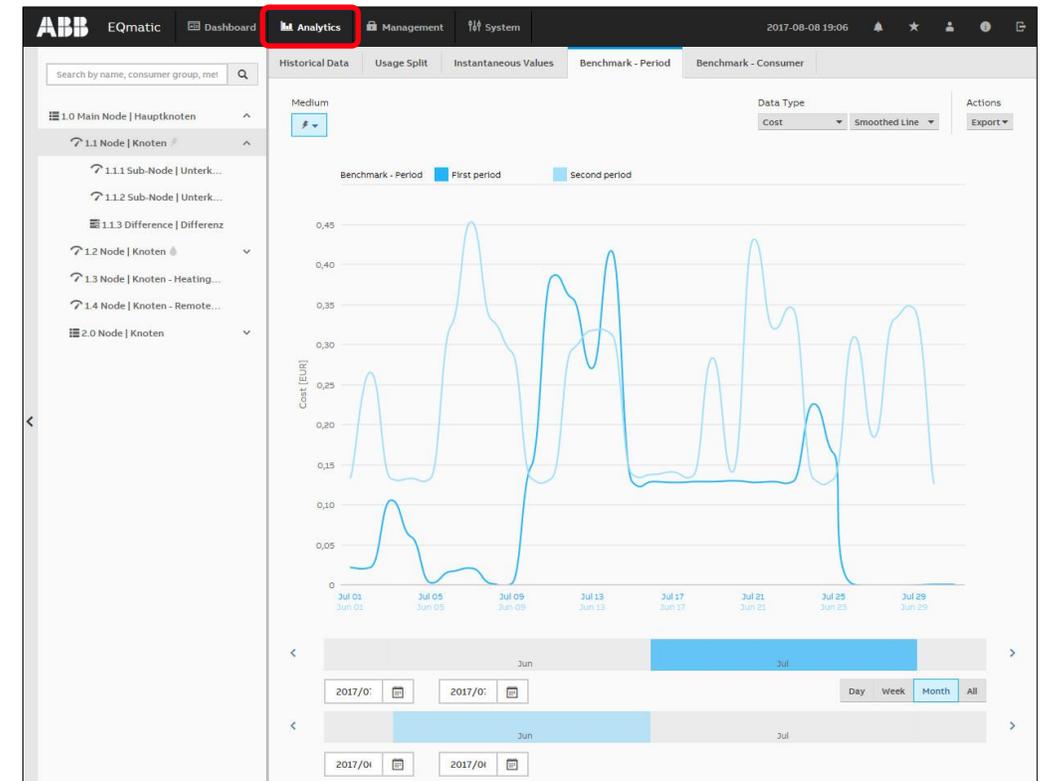

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Main menu: Analytics – Benchmark Consumer

- To compare up to five consumers or nodes referred to a time interval

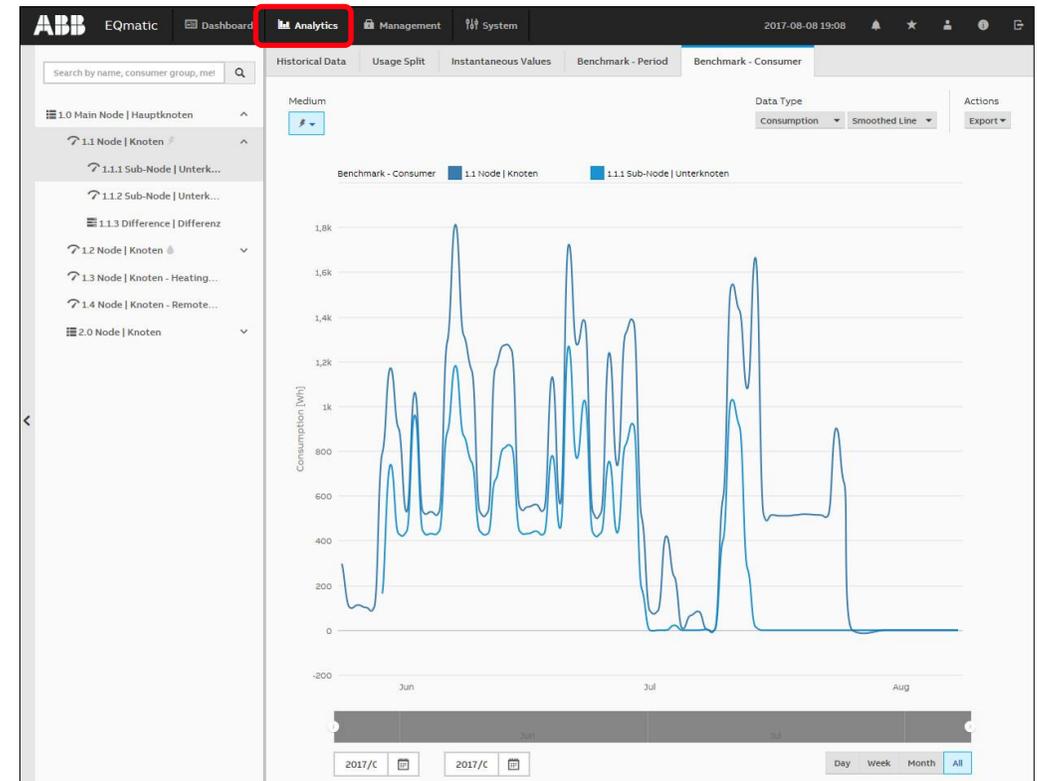

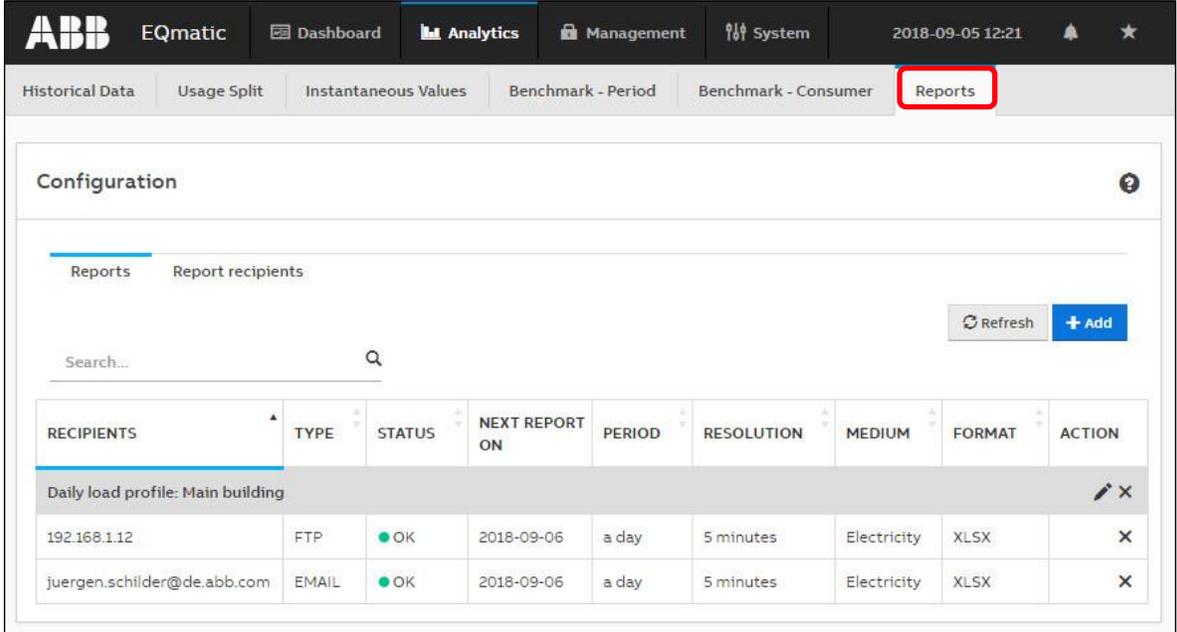

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Main menu: Analytics – Reports

- This function automatically sends analyzes and evaluations to different recipients
- The data can either be sent by email or to an FTP server
- Example: Send saved consumption figures or costs for a meter once a month to a recipient by email in the file format .xlsx for further evaluation and archiving
- Reports configured are displayed and managed in an overview table

The screenshot shows the ABB EQmatic web interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management', and 'System'. The 'Reports' menu item is highlighted with a red box. Below the navigation bar, there are tabs for 'Historical Data', 'Usage Split', 'Instantaneous Values', 'Benchmark - Period', 'Benchmark - Consumer', and 'Reports'. The 'Reports' tab is active, showing a 'Configuration' section with a 'Report recipients' sub-section. A search bar is present, along with 'Refresh' and '+ Add' buttons. A table displays the configured report recipients:

RECIPIENTS	TYPE	STATUS	NEXT REPORT ON	PERIOD	RESOLUTION	MEDIUM	FORMAT	ACTION
Daily load profile: Main building								
192.168.1.12	FTP	OK	2018-09-06	a day	5 minutes	Electricity	XLSX	X
juergen.schilder@de.abb.com	EMAIL	OK	2018-09-06	a day	5 minutes	Electricity	XLSX	X

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Main menu: Analytics – Alarms

- Alarm ranges can be configured for any data point via the analysis function or dashboard
- If a configurable value is exceeded, notification is sent to e-mail recipients and event is written to the alarm log

The screenshot displays the ABB EQmatic web interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Load control', 'Management', and 'System'. The 'Alarms' tab is highlighted in the top navigation bar. Below the navigation bar, the 'Alarms' section is visible, featuring a search bar and a table of active alarms. The table has columns for 'NAME', 'VALUE TYPE', 'NODE', 'STATE', 'UI NOTIFICATIONS', 'E-MAIL NOTIFICATIONS', and 'ACTION'. Two alarms are listed: 'Power Blower room 3-001' (Active Imported Power Total) and 'Voltage low' (Voltage L1). An inset window shows a gauge for 'Active Imported Power' at 105.622 W and a detailed alarm event log for the 'Voltage low' alarm, including category, severity, name, value, node, data point, and date.

	NAME	VALUE TYPE	NODE	STATE	UI NOTIFICATIONS	E-MAIL NOTIFICATIONS	ACTION
<input type="checkbox"/>	Power Blower room 3-001	Active Imported Power Total	Energy Actuator 1: SE/S	Active	Disabled	Disabled	
<input type="checkbox"/>	Voltage low	Voltage L1	Meter Interface 1: B21-113-100	Active	Enabled	Disabled	

Active Imported Power: 105.622 W (Range: 42W to 83W)

Alarm Event Log:

- Category: Error, Severity: High, Name: Voltage low, Value: 233.20 [V], Node: Meter Interface 1: B21-113-100, Data point: Voltage L1, Date: 14/01/2020 17:11:46
- Category: Note, Severity: High, Name: Power Blower room 3-001, Value: 38.86 [W], Node: Energy Actuator 1: SE/S, Data point: Active Imported Power Total, Date: 14/01/2020 17:11:45

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Main menu: Load control (only for QA/S 1.16.1 KNX)

- With the Load Control Management function, load shedding sequences can be prioritized based on the electrical power values received from electricity meters
- The load control parameter must be activated in the ETS so that the load control can be displayed and operated via the user interface

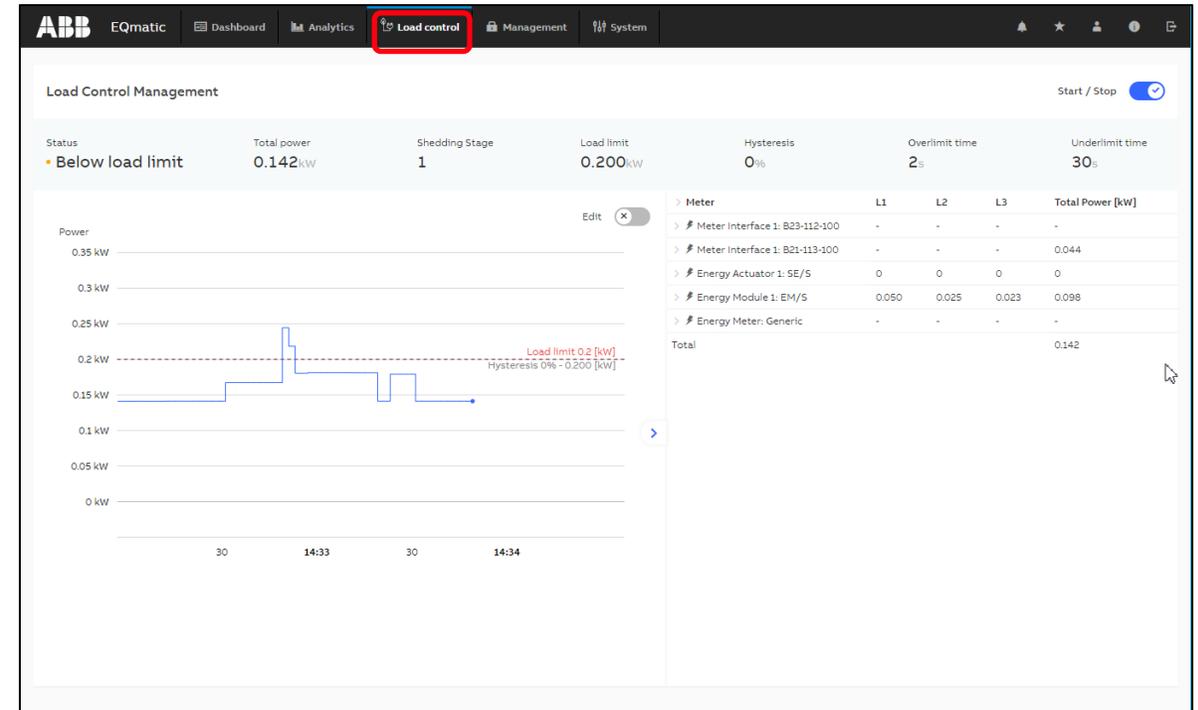

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Main menu: Management

- The *Management* menu can be used to make settings (Administrator rights are required)
 - Meter Management
 - Metering Structure
 - User Management
 - Tariff and Units
 - Consumer Groups
 - Data Sharing

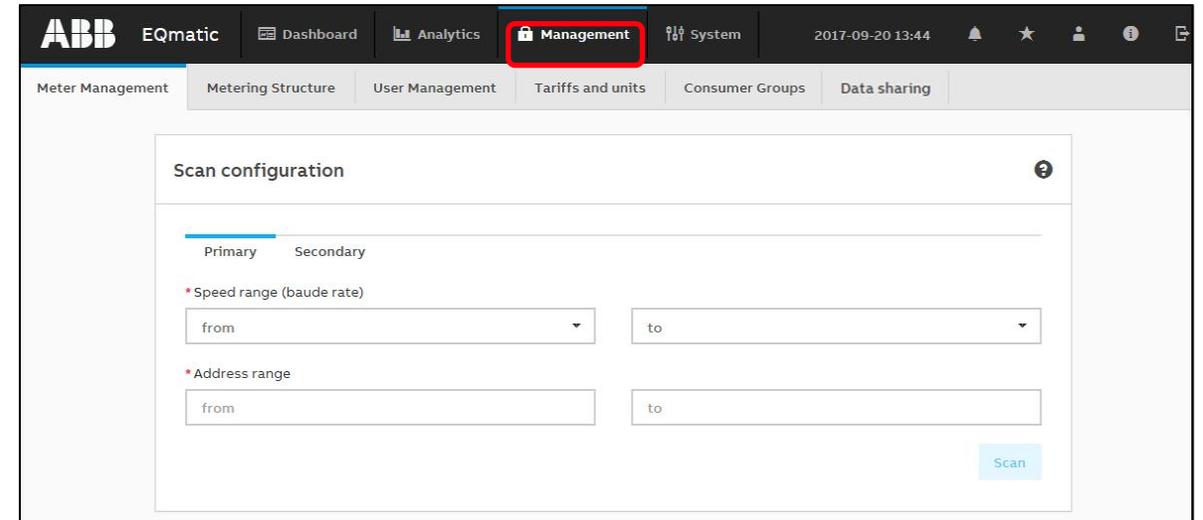

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Main menu: System Settings

- Basic settings are made in the *System* menu (Administrator rights are required)
 - General
 - Date and Time
 - Network
 - Update
 - SMTP Configuration
 - SSL Certificate
 - SSH Access
 - Erase data
 - System Log
 - System diagnostics

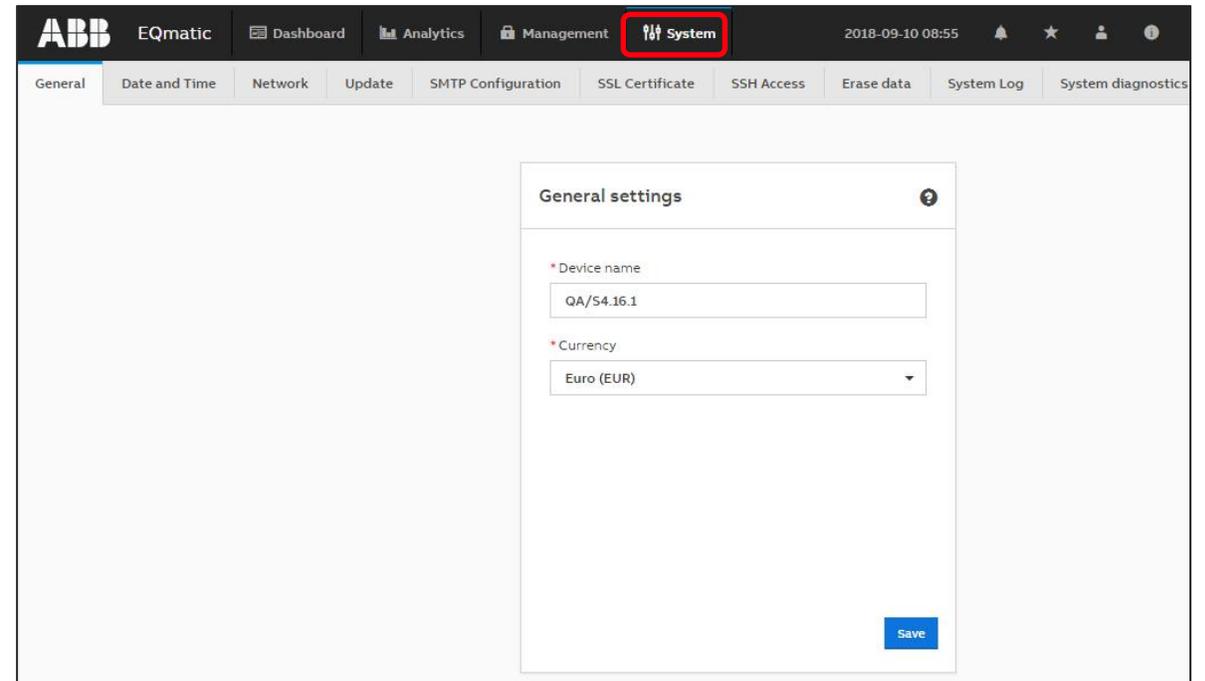

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Example: Analytics – Instantaneous Values

ABB Energy Analyzer QA/S

- record, store, visualize and analyze consumption and generation data of gas, water and energy meters

The screenshot displays the ABB EQmatic Energy Analyzer interface. The left sidebar shows a list of energy meters, with 'Energy main meter - Energy' highlighted in a red box. A red arrow points from this box to the 'Electricity' section of the main content area. Below the sidebar, a red text box indicates 'Meter topology -> Main meter'. The main content area shows a table of instantaneous values for Electricity, including Active Imported Energy Total, Active Exported Energy Total, Current tariff, Active Imported Power Total, Active Imported Power L1, Active Imported Power L2, Active Imported Power L3, Reactive Imported Power Total, Reactive Imported Power L1, Reactive Imported Power L2, Reactive Imported Power L3, Apparent Imported Power Total, Apparent Imported Power L1, Apparent Imported Power L2, Apparent Imported Power L3, Voltage L1, Voltage L2, Voltage L3, Voltage L1-2, Voltage L2-3, Voltage L3-1, Current L1, Current L2, Current L3, Current Neutral, Frequency, and Power Factor Total.

Metric	Value
Active Imported Energy Total	12,546,480 Wh
Active Exported Energy Total	2,270 Wh
Current tariff	1
Active Imported Power Total	784.77 W
Active Imported Power L1	254.88 W
Active Imported Power L2	73.32 W
Active Imported Power L3	456.58 W
Reactive Imported Power Total	-408.66 var
Reactive Imported Power L1	-37.03 var
Reactive Imported Power L2	-194.45 var
Reactive Imported Power L3	-177.18 var
Apparent Imported Power Total	1,187.77 VA
Apparent Imported Power L1	262.56 VA
Apparent Imported Power L2	225.84 VA
Apparent Imported Power L3	699.39 VA
Voltage L1	233 V
Voltage L2	232.10 V
Voltage L3	233.60 V
Voltage L1-2	402.90 V
Voltage L2-3	403.10 V
Voltage L3-1	404.20 V
Current L1	1.13 A
Current L2	0.97 A
Current L3	3 A
Current Neutral	2.48 A
Frequency	50 Hz
Power Factor Total	0.70

Overview

ABB i-bus® KNX

- KNX is an open standard (see EN 50090, ISO/IEC 14543) for commercial and domestic building automation administered by the KNX Association cvba, a non-profit organisation
- KNX devices can manage lighting, blinds and shutters, HVAC, security systems, energy management, audio video, white goods, displays, remote control, etc.
- KNX can use an use several physical communication media: twisted pair, powerline, RF (KNX-RF) and IP (KNXnet/IP)
- On this network, the devices form distributed applications and tight interaction is possible
- The KNX Association had 478 registered hardware and software vendor members from 44 nations

Source: WIKIPEDIA

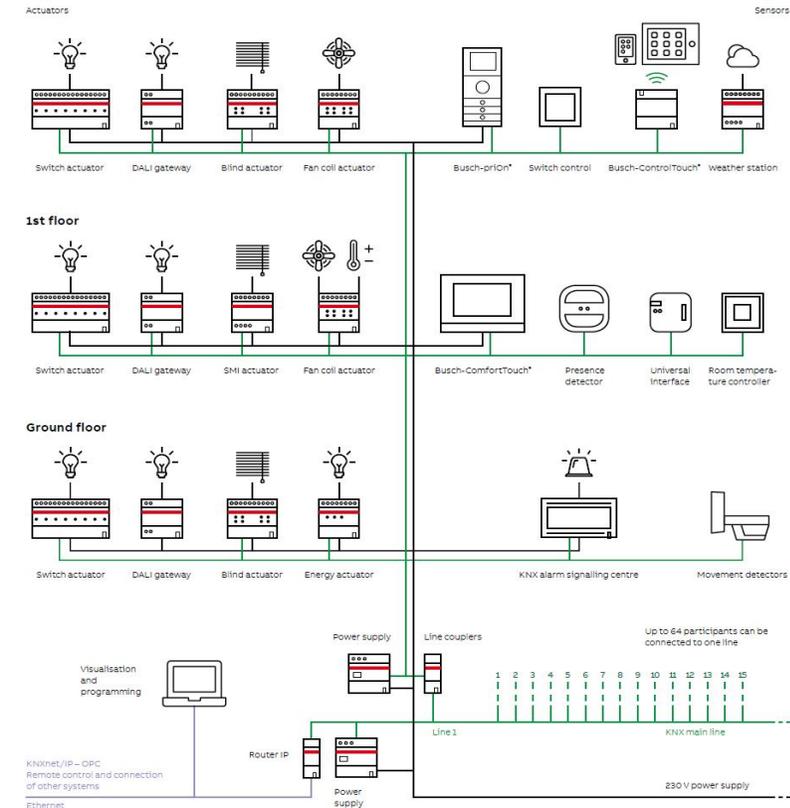

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

M-Bus

- M-Bus (Meter-Bus) is a technical standard (EN 13757-2), applying its rules, e.g. in electricity meters, allows the electricity consumption to be transmitted as measured data
- The gas, heat or water consumption can also be measured and transmitted by meters with M-Bus
- The special feature here is remote reading, which involves additional connected devices transmitting their collected data over the Internet or the mobile telecommunications network. This can eliminate the need for humans to read the meters

Source: WIKIPEDIA

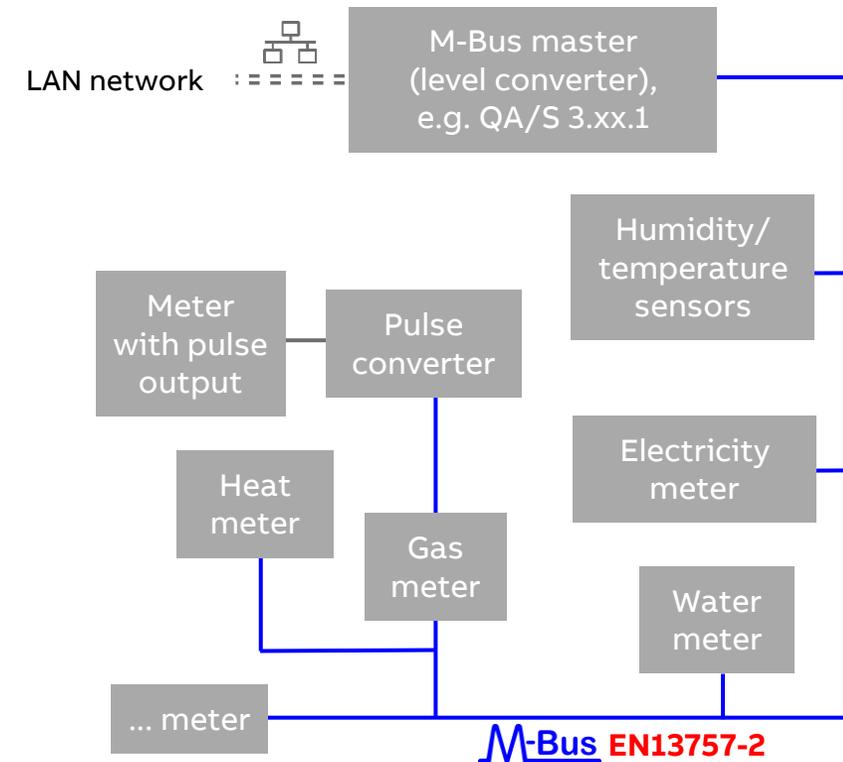

ABB EQmatic Energy Analyzer QA/S x.yy.1

Overview

Modbus RTU (RS485)

- Modbus is a serial communications protocol originally published by Modicon in 1979 for use with its programmable logic controllers (PLCs)
- Modbus has become a de facto standard communication protocol and is now a commonly available means of connecting industrial electronic devices
- The main reasons for the use of Modbus in the industrial environment are:
 - Developed with industrial applications in mind
 - Openly published and royalty-free
 - Easy to deploy and maintain

General Information

Extended Product Type:	QA/S3.16.1
Product ID:	2CDG110226R0011
EAN:	4016779997751
Catalog Description:	QA/S3.16.1 Energy Analyzer, M-Bus
Long Description:	Energy management solution for capturing and analyzing consumption data of up to 16 electricity, gas, water or heat meters via M-Bus. Web-based user interface with graphical analysis functions such as historical data, dashboard, and more.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Conclusion

Compact energy monitoring solution

This allows the customer to assign and monitor sub-metering data via web-based devices to improve energy efficiency and to lower costs

Energy and cost allocation

Reduce costs

Compliance with local provisions (e.g. ISO 50001, RT 2012)

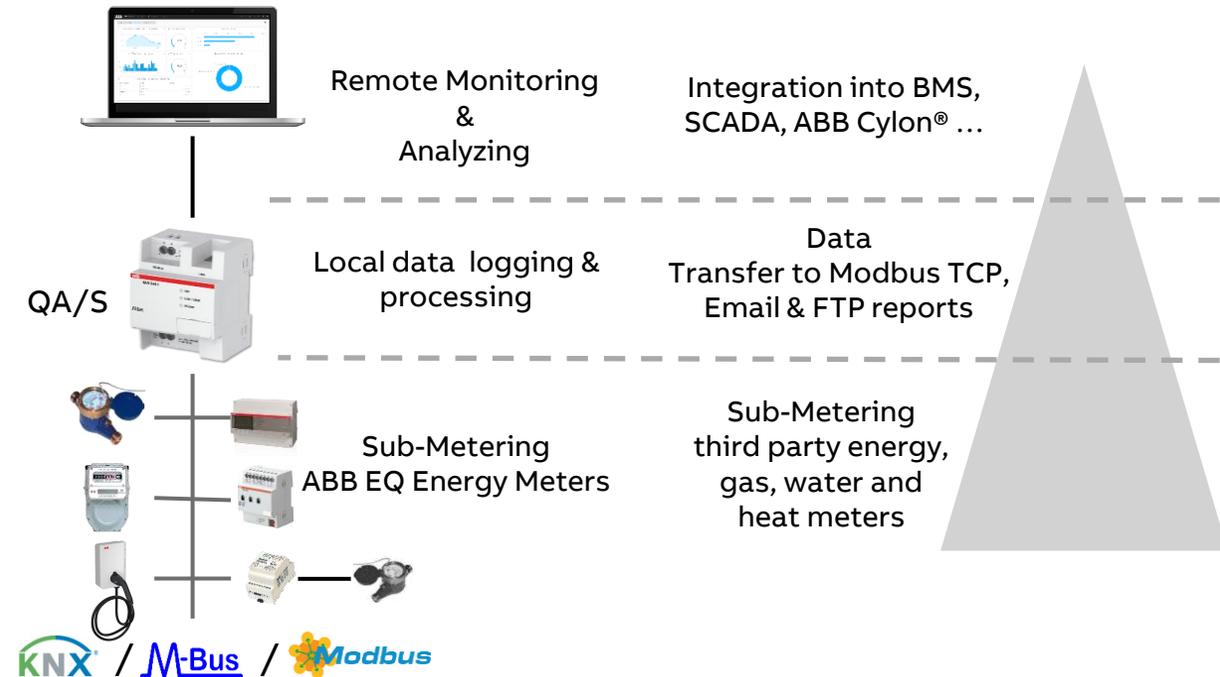

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 1

The Energy Analyzer QA/S 1.xx.1 records meter data via

A Modbus

B M-Bus

C KNX

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 1

The Energy Analyzer QA/S 1.xx.1 records meter data via

A Modbus

B M-Bus

C KNX

ABB EQmatic collects data from KNX meters and saves them locally in the device database

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 2

The Energy Analyzer QA/S 3.xx.1 records meter data via

- A Modbus
- B M-Bus
- C S0 pulse outputs

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 2

The Energy Analyzer QA/S 3.xx.1 records meter data via

- A Modbus
- B M-Bus
- C S0 pulse outputs

ABB EQmatic collects data from M-Bus meters and saves them locally in the device database

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 3

The Energy Analyzer QA/S 4.xx.1 records meter data via

A Modbus

B M-Bus

C KNX

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 3

The Energy Analyzer QA/S 4.xx.1 records meter data via

A Modbus

B M-Bus

C KNX

ABB EQmatic collects data from Modbus meters and saves them locally in the device database

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 4

Which types of consumption data can be recorded?

- A** Any media such as electricity, gas, water or heat
- B** Only Gas and water
- C** Only electricity

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 4

Which types of consumption data can be recorded?

- A** Any media such as electricity, gas, water or heat
- B** Only Gas and water
- C** Only electricity

Consumption data of electricity, gas, water or heat

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer(s) is correct?

Question 5

The consumption data are ...

- A** ... recorded and forwarded to a higher management level (via Modbus TCP)
- B** ... saved, evaluated and displayed with a web browser
- C** ... recorded and sent on the KNX bus via an integrated interface

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer(s) is correct?

Question 5

The consumption data are ...

- A** ... recorded and forwarded to a higher management level (via Modbus TCP)
- B** ... saved, evaluated and displayed with a web browser
- C** ... recorded and sent on the KNX bus via an integrated interface

Storing, analyzing and displaying data and sharing with other systems via Modbus TCP

Planning

ABB EQmatic Energy Analyzer QA/S x.yy.1

Planning

The appropriate standards, directives, regulations and specifications of the appropriate country should be observed when planning and setting up electrical installations

Operate the device only within the specified technical data

The Energy Analyzer is designed for use in 10/100 BaseT networks compliant to IEEE 802.3. The device features an AutoSensing function and sets the baud rate (10 or 100 Mbit) automatically.

Bus-specific requirements (e.g. max. cable length, etc.) must be observed

- Further information and documentation about M-Bus: www.m-bus.com
 - Standard EN 13757-1, “Communication systems for meters – Part 1: Data exchange”
 - Standard EN 13757-2, “Communication systems for meters – Part 2: Wired M-Bus communication”
 - Standard EN 13757-3, “Communication systems for meters – Part 3: Application protocols”
- Further information and documentation about Modbus: www.modbus.org
- Further information and documentation about KNX: www.abb.com/knx and www.knx.org

ABB EQmatic Energy Analyzer QA/S x.yy.1

What is M-Bus?

M-Bus (Meter-Bus) is a European standard for remotely reading gas, water, heat or electricity meters

- The M-Bus interface is designed for communication over two-wire lines
- This bus satisfies the special requirements for remotely powered or battery-operated meters
- The M-Bus is based on the master-slave principle
- The meters send the collected measured values and data to a common master for further processing on request
- A unique address must be set in each meter
- Master = Level converter, e.g. QA/S 3.xx.1 Energy Analyzer
- Slave = M-Bus device/meter (e.g. ABB electricity meter from the A and B series, water meter, heat meter, gas meter, etc., with M-Bus interface)
- An M-Bus installation can consist of up to 250 addresses (meters)

The QA/S 3.xx.1 Energy Analyzer supports up to 16 or 64 meters, depending on the device type

ABB EQmatic Energy Analyzer QA/S x.yy.1

What is M-Bus?

The M-Bus is designed for baud rates from 300 to 9,600 baud

ABB meters from the A and B series can communicate at baud rates of 2,400 to 9,600 baud

The baud rate must be set in the meter

The M-Bus interface is protected against polarity reversal, i.e. the wires of the cable used can be interchanged

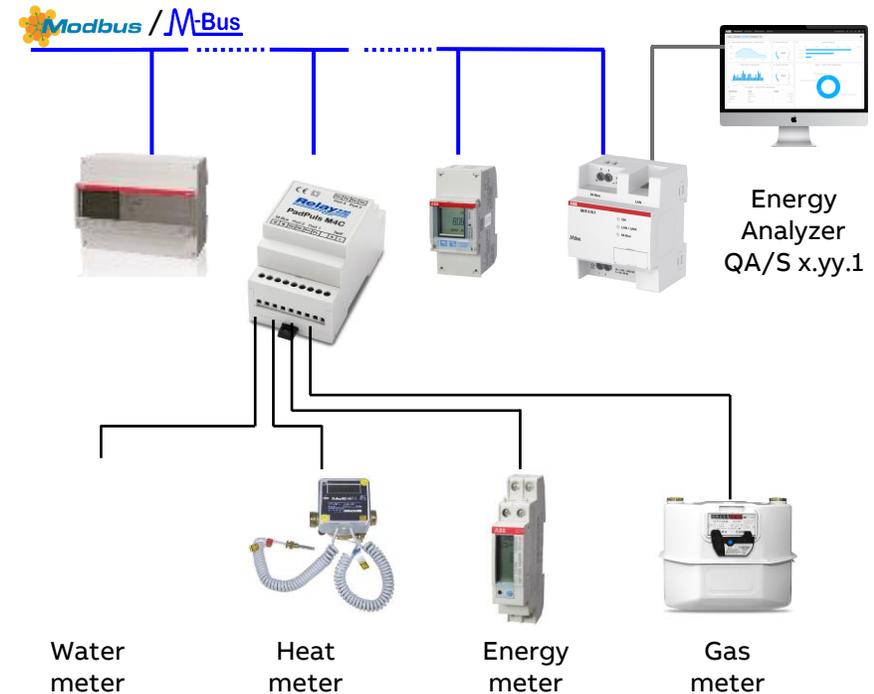

The M-Bus supports different bus topologies

- The cables should be kept as short as possible
- A combination star, tree and linear structure is typically used; a ring structure is impermissible

ABB EQmatic Energy Analyzer QA/S x.yy.1

M-Bus pulse adapter

- A pulse adapter is used to adapt consumption measuring devices, e.g. electricity, gas or water meters, to the M-Bus/Modbus system
- The measuring devices must feature a floating pulse output or a mounted pulse module for sensing
- Pulse adapters with different numbers of channels are available as rail-mounted devices and in surface mounted enclosures, etc.
- Configuration (primary address, medium, unit, ...) is performed using a programming adapter and software

Meter with pulse output or pulse module for scanning

ABB EQmatic Energy Analyzer QA/S x.yy.1

Energy Analyzer M-Bus QA/S 3.xx.1: Technical data [M-Bus](#)

- Energy Analyzer, M-Bus master to DIN EN 13757-2
- Max. number of M-Bus slaves on QA/S 3.16.1: 16
- Max. number of M-Bus slaves on QA/S 3.64.1: 64
- M-Bus baud rate: 300; 600; 1,200; 2,400; 4,800; 9,600
- Operating voltage: Us 100...240 V AC, 50/60 Hz
- Power consumption at 230 V AC < 10 W
- Device leakage loss at 230 V AC < 3 W at 230 V AC
- Simultaneous access to web browser for up to 10 users
- Retrieval/storage of meter data every 5 minutes
- IP security: HTTPS, SSL
- Data export: JPG, PNG, CSV, XLSX, PDF
- Data transfer: Modbus TCP
- Report: FTP and e-mail

ABB EQmatic Energy Analyzer QA/S x.yy.1

Energy Analyzer M-Bus QA/S 3.xx.1: Technical data [M-Bus](#)

- Storage capacity with up to 64 M-Bus slaves: min. 3 years
- IP network connection: Ethernet 10 / 100 Mb to IEEE 802.3
- Temperature range in operation: -5 °C ... +45 °C
- Environmental conditions: humidity max. 93%; dew formation must be ruled out
- Design: modular installation device (MDRC) in Pro M design
- Dimensions: 90 x 70 x 64 mm (H x W x D)
- Mounting: On 35 mm mounting rail to DIN EN 60 715
- Mounting position: Any
- Display elements: LEDs to indicate operational readiness, network connection and M-Bus operational readiness
- Operating element: Reset button

ABB EQmatic Energy Analyzer QA/S x.yy.1

What is Modbus RTU?

- Modbus is a serial communication protocol that was developed and published for use with programmable logic controllers (PLC)
- Modbus RTU (remote terminal unit) is the most common implementation available for Modbus
- It is a communication method for the transmission of information via serial cables between electronic devices
- The device that requests the information is termed the Modbus master
- The devices that send the information are Modbus slaves
- In a standard Modbus network there is one master and up to 247 slaves each with a unique slave address from 1 to 247

ABB EQmatic Energy Analyzer QA/S x.yy.1

What is Modbus RTU?

Bus principle RS485

- The Modbus standard uses the RS485 standard
- This standard defines the physical layer of the Modbus interface
- The data are transmitted in serial form via a 2-wire bus (RS485)
- The RS485 standard is based on the master – slave method and defines the bus cable as a cable with a start and an end that are each terminated using an EOL resistor RT (T=Termination)
- Master = level converter (e.g. QA/S 4.xx.1 Energy Analyzer)
- Slave = Modbus device/meter (e.g. ABB electricity meter from the A and B series, water meter, heat meter, gas meter, etc., with Modbus RTU interface)

Transmission speed: 300; 600; 1,200; 2,400; 4,800; 9,600; 19,200; 38,400; 57,600; 115,200 baud

Polarity: Attention must be paid to the correct polarity of the core pairs during installation because incorrect poling will invert the data signal

ABB EQmatic Energy Analyzer QA/S x.yy.1

What is Modbus RTU?

Topology

- The optimal cable topology for the Modbus RTU is a purely linear structure
- Droplines to individual devices with a maximum length of 1 m are allowed
- These droplines are not terminated

Cable types

- A twisted pair, screened cable is recommended as the bus cable
- The cable type J-Y(St)Y n x 2 x 0.8mm is suitable, for instance
- The screen is to be connected to PE at one end
- The bus cable must be terminated with resistors (120 Ω , 0.25 W) at both ends so that only minimal reflections are produced
- The serial communication on the RS485 interface operates most efficiently if the source and load impedance are matched at 120 Ohm
- The EOL resistors are connected in parallel with terminals A and B and are included in the scope of delivery

ABB EQmatic Energy Analyzer QA/S x.yy.1

What is Modbus RTU?

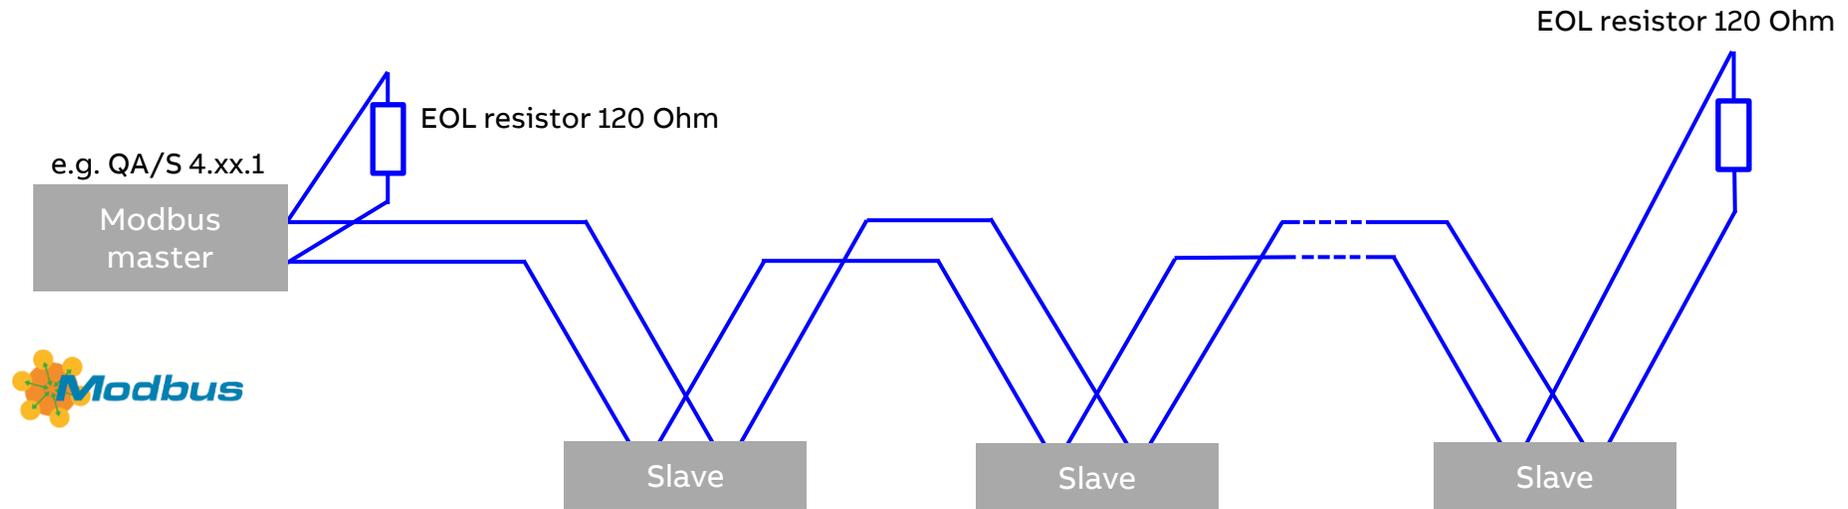

ABB EQmatic Energy Analyzer QA/S x.yy.1

What is Modbus RTU?

Cable length

- The RS485 specification limits the cable length to 1,200 m, the number of devices in the bus to 32 and stipulates a linear topology (daisy chain)

Number of devices

- The number of Modbus devices depends on the unit load (UL) of the RS485 transceivers
- In the worst case a transceiver has 1 UL
- An RS485 segment is specified for 32 UL
- If more devices are to be connected, a repeater must be used
- Modern RS485 transceivers have 1/4 or 1/8 UL

If only such devices are used, 128 or 256 users are possible without repeaters

Note

- The ABB A and B Series Energy Meters have a unit load of 1/8 UL
- Therefore 64 ABB meters can be connected to the QA/S 4.64.1 Energy Analyzer without repeaters

ABB EQmatic Energy Analyzer QA/S x.yy.1

Energy Analyzer Modbus RTU QA/S 4.xx.1: Technical data

- Energy Analyzer, Modbus-Bus master
- Max. number of Modbus RTU slaves on QA/S 4.16.1: 16
- Max. number of Modbus RTU slaves on QA/S 4.64.1: 64
- Modbus baud rate: 1,200; 2,400; 4,800; 9,600; 19,200; 38,400; 57,600; 115,200
- Operating voltage: Us 100...240 V AC, 50/60 Hz
- Power consumption at 230 V AC < 10 W
- Device leakage loss at 230 V AC < 3 W at 230 V AC
- Simultaneous access to web browser for up to 10 users
- Retrieval/storage of meter data every 5 minutes
- IP security: HTTPS, SSL
- Data export: JPG, PNG, CSV, XLSX, PDF
- Data transfer: Modbus TCP
- Report: FTP and e-mail

ABB EQmatic Energy Analyzer QA/S x.yy.1

Energy Analyzer Modbus RTU QA/S 4.xx.1: Technical data

- Storage capacity with up to 64 Modbus RTU slaves: min. 3 years
- IP network connection: Ethernet 10 / 100 Mb to IEEE 802.3
- Temperature range in operation: -5 °C ... +45 °C
- Environmental conditions: humidity max. 93%; dew formation must be ruled out
- Design: modular installation device (MDRC) in Pro M design
- Dimensions: 90 x 70 x 64 mm (H x W x D)
- Mounting: On 35 mm mounting rail to DIN EN 60 715
- Mounting position: Any
- Display elements: LEDs to indicate operational readiness, network connection and Modbus RTU operational readiness
- Operating element: Reset button

ABB EQmatic Energy Analyzer QA/S x.yy.1

What is KNX?

- KNX is the synonym for smart home and intelligent building control
- In this innovative system, all devices communicate with one another via a single bus cable which is installed alongside the normal power lines
- This means that all electrical functions are connected with one another via the bus system, both in residential and commercial buildings
- With the KNX system, the buildings we occupy are easier to manage and control, resulting in increased flexibility, security, economic efficiency and convenience
- The operational flexibility of an KNX electrical installation allows the everyday working or living environment to be easily adapted to the individual's needs - now and in the future
- Utilizing KNX means cost advantages throughout the entire lifetime: From planning and implementation, through the building phase, sale or rental, right up to operation and administration
- This ensures that the building will be up-to-date and profitable in the long-term thus ensuring a short amortization period

ABB EQmatic Energy Analyzer QA/S x.yy.1

What is KNX?

Main Advantages

- International Standard, therefore future proof (EN13321-1/2, ISO/IEC14543-3, in US ANSI/ASHRAE standard 135, SAC GB/T 20965,...)
- By product certification, KNX guarantees Interoperability & Interworking of products
- KNX stands for high product quality (ISO 9001)
- A unique manufacturer independent Engineering Tool Software ETS®
- KNX can be used for all applications in home and building control
- KNX is fit for use in different kind of buildings: New or existing buildings, one family houses or large size buildings
- KNX supports several communication media (TP, PL, RF and IP)
- KNX can be coupled to other systems (BACnet, DALI, DMX, RS485, M-BUS, ...)
- KNX is independent from any hard- or software technology

ABB EQmatic Energy Analyzer QA/S x.yy.1

What is KNX?

Application Areas

- Lighting control and regulation
- Heating, ventilation, cooling
- Blinds and shutter control
- Security and monitoring
- Energy and load management
- Visualisation and operation
- Central automatic
- Remote control / maintenance
- Interface to other control systems
- ...

ABB EQmatic Energy Analyzer QA/S x.yy.1

What is KNX?

The KNX structure created is very flexible in its design due to the possible connection of the devices: linear, tree and star wiring configurations are allowed

The topological configuration includes lines and areas

A line is the smallest unit

- Up to 64 devices can be connected to a line
- At most 15 lines can be combined via line couplers to one area
- A bus system can be extended up to 15 areas (app. 15,000 devices and max. 57,000)

Transmission speed: 9,600 bit/s

Bus access method: CSMA/CA

“Programming” by the Engineering Tool Software ETS

ABB EQmatic Energy Analyzer QA/S x.yy.1

Energy Analyzer KNX QA/S 1.16.1: Technical data

- KNX device certified according to EN 50491
- Max. number of KNX meters: 16
- Maximum number of group objects: 1,630
- Maximum number of group addresses: 2,000
- KNX Bus voltage 21...32 V DC
- KNX current consumption, bus < 12 mA
- Operating voltage: Us 100...240 V AC, 50/60 Hz
- Power consumption at 230 V AC < 10 W
- Device leakage loss at 230 V AC < 3 W at 230 V AC
- Simultaneous access to web browser for up to 10 users
- Retrieval/storage of meter data every 5 minutes
- IP security: HTTPS, SSL

ABB EQmatic Energy Analyzer QA/S x.yy.1

Energy Analyzer KNX QA/S 1.16.1: Technical data

- Data export: JPG, PNG, CSV, XLSX, PDF
- Data transfer: Modbus TCP
- Report: FTP and e-mail
- Storage capacity with up to 16 KNX devices: min. 3 years
- IP network connection: Ethernet 10 / 100 Mb to IEEE 802.3
- Temperature range in operation: -5 °C ... +45 °C
- Environmental conditions: humidity max. 93%; dew formation must be ruled out
- Design: modular installation device (MDRC) in Pro M design
- Dimensions: 90 x 70 x 64 mm (H x W x D)
- Mounting: On 35 mm mounting rail to DIN EN 60 715
- Mounting position: Any
- Display elements: LEDs to indicate operational readiness, network connection and KNX bus operational readiness
- Operating element: Reset button

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 1

What supply voltage does a Energy Analyzer QA/S require?

A 12...240 V AC/DC

B 12...24 V DC

C 100...240 V AC

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 1

What supply voltage does a Energy Analyzer QA/S require?

A 12...240 V AC/DC

B 12...24 V DC

C 100...240 V AC

Operating voltage: U_s 100...240 V AC

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 2

What are the connections on the Energy Analyzer QA/S 1.16.1?

- A** Supply voltage, Modbus RTU and IP network
- B** Supply voltage, M-Bus and IP network
- C** KNX bus connection, supply voltage and IP network

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 2

What are the connections on the Energy Analyzer QA/S 1.16.1?

- A** Supply voltage, Modbus RTU and IP network
- B** Supply voltage, M-Bus and IP network
- C** KNX bus connection, supply voltage and IP network

Supply voltage – KNX – IP network

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 3

What are the connections on the Energy Analyzer QA/S 3.xx.1?

- A** Supply voltage, Modbus RTU and IP network
- B** Supply voltage, M-Bus and IP network
- C** KNX bus connection, supply voltage and IP network

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 3

What are the connections on the Energy Analyzer QA/S 3.xx.1?

- A** Supply voltage, Modbus RTU and IP network
- B** Supply voltage, M-Bus and IP network
- C** KNX bus connection, supply voltage and IP network

Supply voltage – M-Bus – IP network

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 4

What are the connections on the Energy Analyzer QA/S 4.xx.1?

- A** Supply voltage, Modbus RTU and IP network
- B** Supply voltage, M-Bus and IP network
- C** KNX bus connection, supply voltage and IP network

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 4

What are the connections on the Energy Analyzer QA/S 4.xx.1?

- A** Supply voltage, Modbus RTU and IP network
- B** Supply voltage, M-Bus and IP network
- C** KNX bus connection, supply voltage and IP network

Supply voltage – Modbus RTU – IP network

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 5

What functions do all Energy Analyzer QA/S offer?

- A**
 - Cost/consumption analysis for media such as electricity and water
 - Networking several Energy Analyzer QA/S devices via IP network
 - CO₂ emissions display
- B**
 - Data export to xls, csv, pdf, etc.
 - Addition of Favorites
 - Load management by avoiding load peaks
- C**
 - Storage of metering data from up to 64 meters for at least 3 years
 - Display and evaluation of historical consumption/measured data
 - Customizable dashboard with predefined widgets

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 5

What functions do all Energy Analyzer QA/S offer?

- A**
 - Cost/consumption analysis for media such as electricity and water
 - Networking several Energy Analyzer QA/S devices via IP network
 - CO₂ emissions display
- B**
 - Data export to xls, csv, pdf, etc.
 - Addition of Favorites
 - Load management by avoiding load peaks
- C**
 - Storage of metering data from up to 64 meters for at least 3 years
 - Display and evaluation of historical consumption/measured data
 - Customizable dashboard with predefined widgets

Storing metering data – historical consumption/measured data – configurable dashboard

Installing

ABB EQmatic Energy Analyzer QA/S x.yy.1

Installation

- Attention! Hazardous voltage! Mounting and commissioning may be carried out only by electrical specialists
- The appropriate standards, directives, regulations and specifications of the appropriate country should be observed when setting up electrical installations
- Operate the device only within the specified technical data
- The device must be operated only in an enclosed housing (distribution board)
- Refer to the product manual or the installation and operating instructions for a detailed description of installation and commissioning

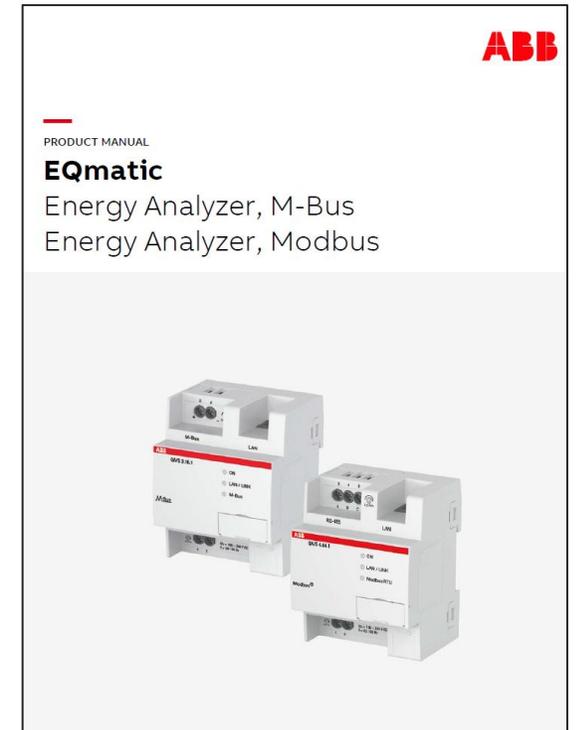

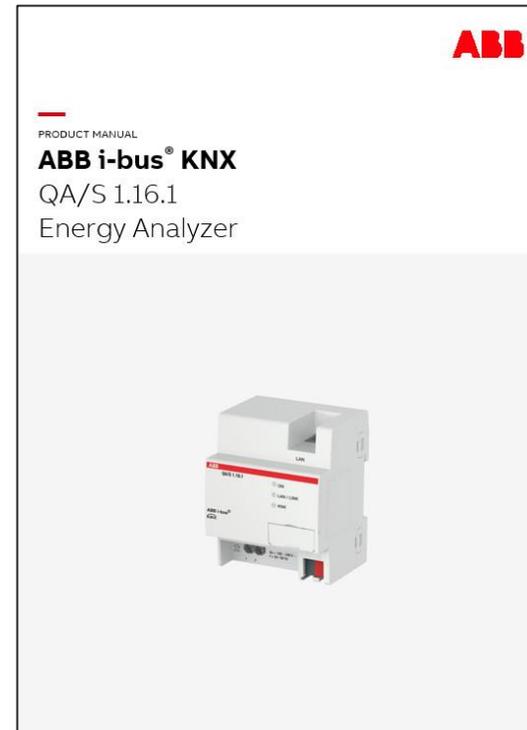

ABB EQmatic Energy Analyzer QA/S x.yy.1

Mounting and installation

- The device is a modular installation device for quick installation in distribution boards on 35 mm mounting rails to DIN EN 60 715
- The installation position can be selected as required
- Electrical connection and M-Bus/Modbus connection are performed via screw terminals
- The connection to the ABB i-bus® KNX is established via the supplied bus connection terminal (QA/S 1.16.1 KNX)
- The device is ready for operation once the operating voltage is on and the initialization process has finished (green LED lights up continuously)
- The device must be accessible for operation, testing, visual inspection, maintenance and repair in compliance with DIN VDE 0100-520

QA/S 3.xx.1

QA/S 4.xx.1

QA/S 1.16.1

ABB EQmatic Energy Analyzer QA/S x.yy.1

Scope of delivery

- Energy Analyzer QA/S x.yy.1 with label carrier
- Installation and operating instructions
- Lettering inlay for label carrier
- IP address assignment is set to automatic addressing (DHCP/AutoIP)
- Language: Dependent on the language setting in the browser used
- Currency: EUR
- QA/S 4.xx.1 Modbus
 - Two EOL resistors 120 Ohm
- QA/S 1.16.1 KNX
 - KNX physical address 15.15.255
 - Bus connection terminal (red/black)
 - KNX connection cover cap

- The bus cable must be terminated with resistors (120Ω , 0.25 W) at both ends
- A third conductor must interconnect all the devices of the bus (terminal "C" – common)

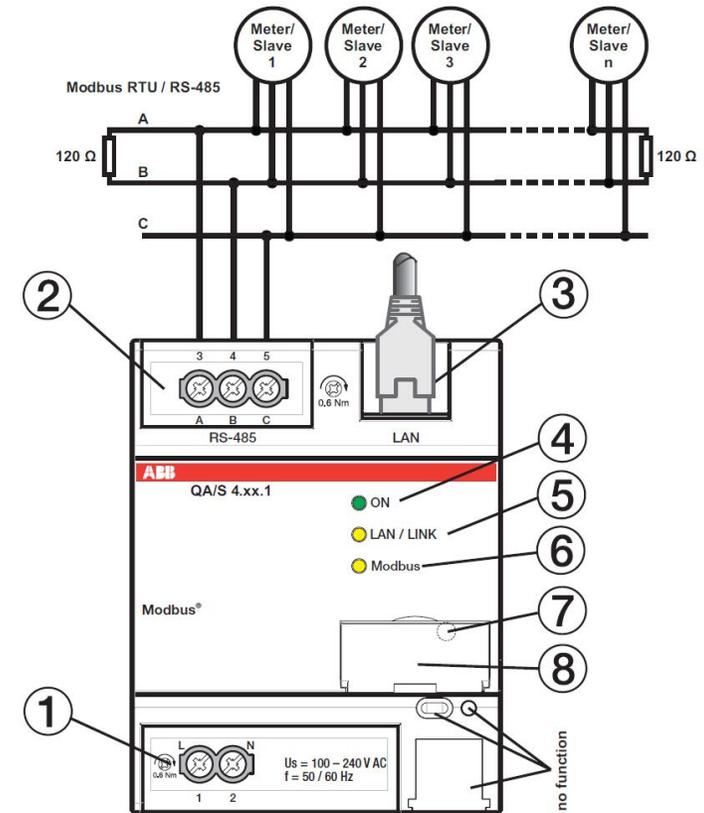

ABB EQmatic Energy Analyzer QA/S x.yy.1

Display elements

LED	Function	Description
 ON	ON	Operating system initialization process complete. Supply voltage on. The device is ready for operation.
	OFF	No supply voltage during operating system initialization process.
	Flashing (1 Hz)	During initialization.
	FLASHING (3 Hz)	Resetting network settings and restarting the device
	FLASHING (10 Hz)	Factory reset; internal error.
 LAN/Link	OFF	No supply voltage. No network connection.
	FLASHING	Network connection OK. Telegram traffic.
 M-Bus/Modbus	ON	Supply voltage OK, device ready for operation and M-Bus/Modbus/KNX connected.
	OFF	No supply voltage. M-Bus/Modbus/KNX not connected.
	FLASHING (1 Hz)	Scanning process for slaves/devices.
	FLASHING (3 Hz)	Resetting network settings and restarting the device.
	FLASHING (10 Hz)	Resetting to factory settings.

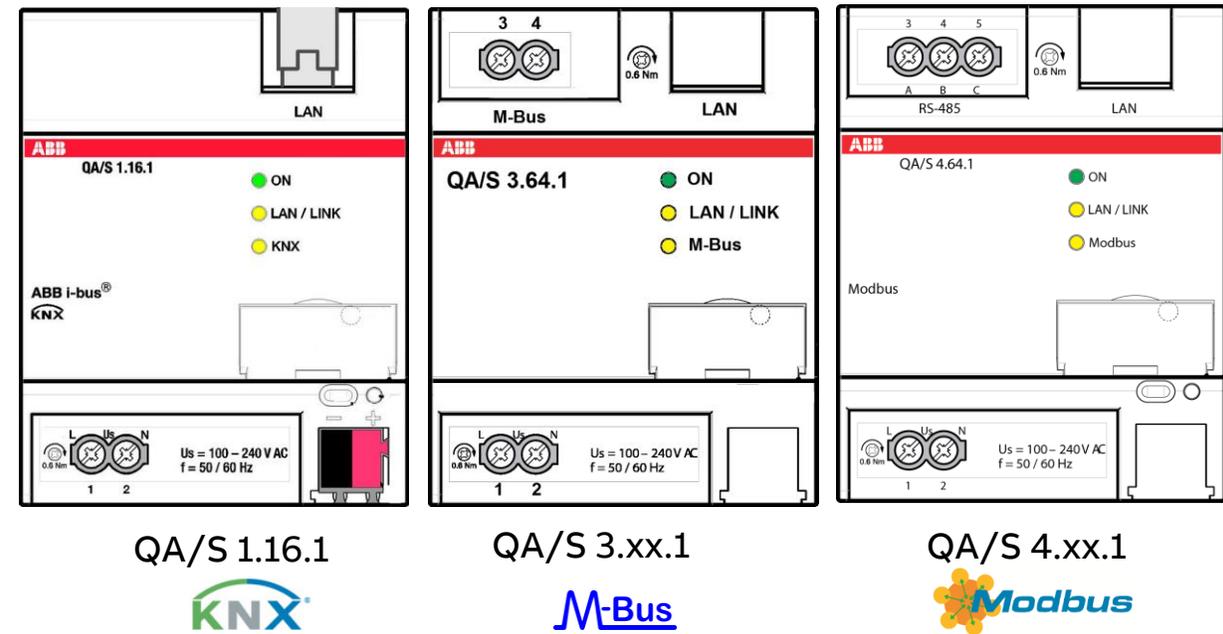

ABB EQmatic Energy Analyzer QA/S x.yy.1

Installation steps

No tools needed!

Fastening on a mounting rail

- Place the DIN rail holder on the upper edge of the DIN rail and push down.
- Push the lower part of the device toward the DIN rail until the DIN rail holder engages.
- The device is now mounted on the DIN rail.

Removing from the mounting rail

- Press on the top of the device
- Release the bottom of the device from the DIN rail
- Lift the device up and off the DIN rail

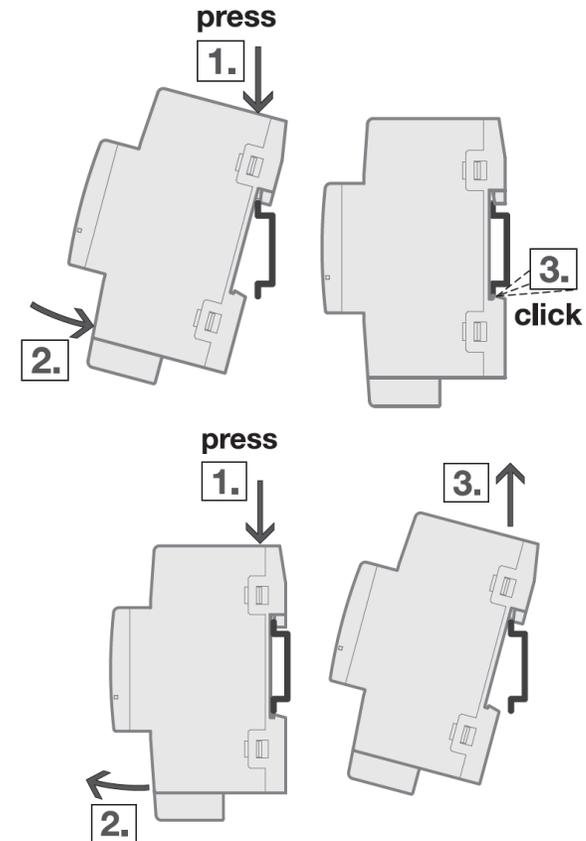

ABB EQmatic Energy Analyzer QA/S x.yy.1

Installation steps

In order to avoid dangerous touch voltages, which originate through feedback from differing phase conductors, all-pole disconnection must be observed when extending or modifying the electrical connections

- Fastening device on mounting rail
- Connecting the lines for
 - Supply voltage
 - M-Bus, Modbus or KNX (meters/slaves)
 - Ethernet/LAN

QA/S 4.xx.1

QA/S 1.16.1

ABB EQmatic Energy Analyzer QA/S x.yy.1

Installation steps

- Connecting the supply voltage
- The operating system starts, and the yellow M-Bus/Modbus/KNX LED lights up
- When the operating system has finished loading, the yellow M-Bus/Modbus/KNX LED goes off and the green ON LED starts to flash while the application is loading
- When the application has finished loading, the green ON LED stops flashing and lights up continuously with the yellow M-Bus/Modbus/KNX LED
- The initialization process is complete
- The device is ready for operation and can be put into operation with a web browser

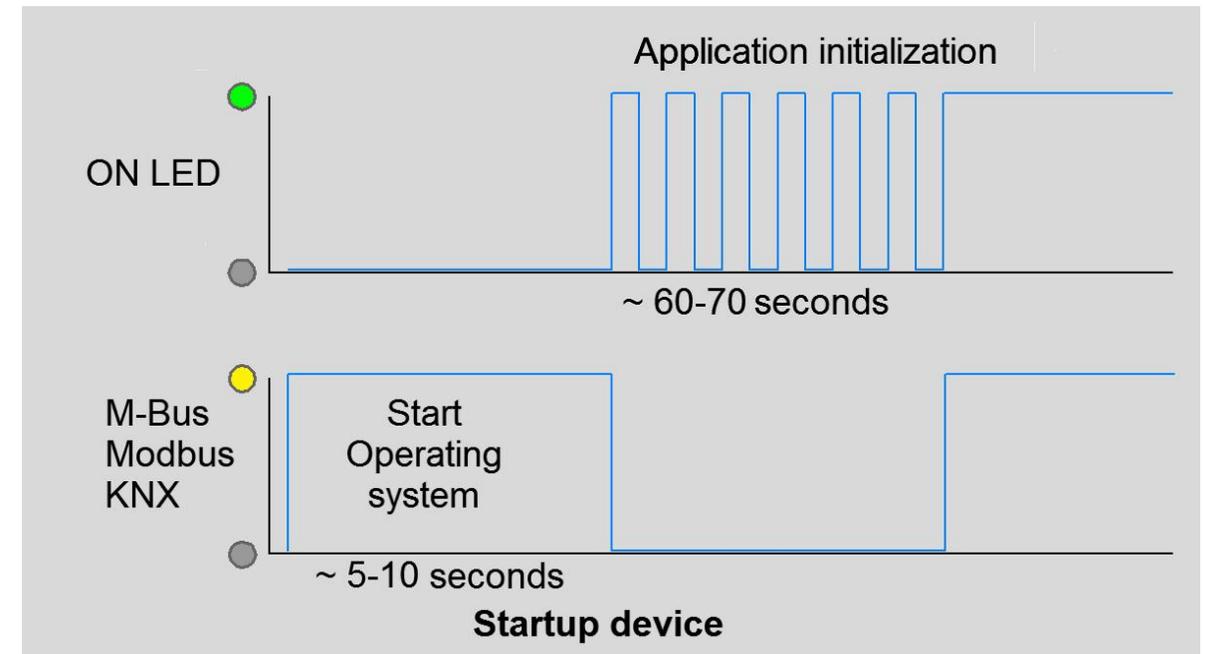

ABB EQmatic Energy Analyzer QA/S x.yy.1

Resetting the device

There are several ways to reset the device:

- Restarting (device reset only)
- Restarting and resetting the network settings
- Resetting to factory settings (deleting configuration and all data)

To reset the device, use the Reset button, which is behind the label carrier

- Open the label carrier cover
- Press the “Reset” button to perform a reset

Press for	Action	LED
< 2 sec.	No reaction	ON LED (green): ON M-Bus/Modbus/KNX LED (yellow): ON
> 2 s and < 10 sec.	1. Restart Pressing and releasing the Reset button restarts the device	ON LED (green): Flashing (3 Hz) M-Bus/Modbus/KNX LED (yellow): ON
> 10 < 20 sec.	2. Restart and reset the network settings Pressing and releasing the Reset button resets the IP address to automatic address assignment (DHCP) and restarts the device	ON LED (green): Flashing (3 Hz) M-Bus/Modbus/KNX LED (yellow): Flashing (3 Hz)
> 20 sec.	3. Restart and reset to factory settings. Pressing and releasing the Reset button deletes all user-defined settings, network settings and database entries	ON LED (green): Flashing (10 Hz) M-Bus/Modbus/KNX LED (yellow): Flashing (10 Hz)

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 1

The Energy Analyzer QA/S is suitable for installation

- A** on a 35 mm mounting rail in any installation position in distribution boards or small housings
- B** outdoors and indoors
- C** only in horizontal position in distribution boards or small housings

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 1

The Energy Analyzer QA/S is suitable for installation

- A** on a 35 mm mounting rail in any installation position in distribution boards or small housings
- B** outdoors and indoors
- C** only in horizontal position in distribution boards or small housings

Installation in distribution boards in any installation position

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 2

How can operational readiness be checked?

- A** Press the “Manual operation” button for longer than 2 seconds. The green ON LED flashes green (1 Hz).
- B** The yellow M-Bus/Modbus/KNX LED flashes yellow (3 Hz) and waits for metering data.
- C** The green ON LED lights up permanently after the initialization process.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 2

How can operational readiness be checked?

- A** Press the “Manual operation” button for longer than 2 seconds. The green ON LED flashes green (1 Hz).
- B** The yellow M-Bus/Modbus/KNX LED flashes yellow (3 Hz) and waits for metering data.
- C** The green ON LED lights up permanently after the initialization process.

The green ON LED lights up permanently

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 3

How is the Energy Analyzer QA/S 1.16.1 connected with the KNX meters?

- A** All KNX meters are connected with the Energy Analyzer QA/S 1.16.1 only in a line structure and the bus cable must be terminated with EOL resistors (120 Ω) at both ends.
- B** The Energy Analyzer QA/S 1.16.1 permits wireless connection in accordance with the wireless KNX RF standards.
- C** All KNX meters are connected with the Energy Analyzer QA/S 1.16.1 in any structure (star, tree, line, ...) according to KNX standards

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 3

How is the Energy Analyzer QA/S 1.16.1 connected with the KNX meters?

- A** All KNX meters are connected with the Energy Analyzer QA/S 1.16.1 only in a line structure and the bus cable must be terminated with EOL resistors (120 Ω) at both ends.
- B** The Energy Analyzer QA/S 1.16.1 permits wireless connection in accordance with the wireless KNX RF standards.
- C** All KNX meters are connected with the Energy Analyzer QA/S 1.16.1 in any structure (star, tree, line, ...) according to KNX standards

Two-wire TP line in star, tree or line topology

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 4

How is the Energy Analyzer QA/S 3.xx.1 connected with the M-Bus meters (slaves)?

- A** All M-Bus meters (slaves) are connected with the Energy Analyzer QA/S 3.xx.1 via a two-wire line.
- B** The KNX interface integrated into the Energy Interface supports the connection of M-Bus meters as well.
- C** The Energy Analyzer QA/S 3.xx.1 permits wireless connection in accordance with the wireless M-Bus standard (EN 13757-4).

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 4

How is the Energy Analyzer QA/S 3.xx.1 connected with the M-Bus meters (slaves)?

- A** All M-Bus meters (slaves) are connected with the Energy Analyzer QA/S 3.xx.1 via a two-wire line.
- B** The KNX interface integrated into the Energy Interface supports the connection of M-Bus meters as well.
- C** The Energy Analyzer QA/S 3.xx.1 permits wireless connection in accordance with the wireless M-Bus standard (EN 13757-4).

Two-wire line in star, tree or line topology

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 5

How is the Energy Analyzer QA/S 4.xx.1 connected with the Modbus RTU meters?

- A** The Energy Analyzer QA/S 4.xx.1 permits wireless connection in accordance with the wireless Modbus standard.
- B** All Modbus meters are connected with the Energy Analyzer QA/S 4.xx.1 in a line structure and the bus cable must be terminated with EOL resistors (120 Ω) at both ends.
- C** All Modbus meters are connected with the Energy Analyzer QA/S 4.xx.1 in any structure (star, tree, line, ...).

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 5

How is the Energy Analyzer QA/S 4.xx.1 connected with the Modbus RTU meters?

- A** The Energy Analyzer QA/S 4.xx.1 permits wireless connection in accordance with the wireless Modbus standard.
- B** All Modbus meters are connected with the Energy Analyzer QA/S 4.xx.1 in a line structure and the bus cable must be terminated with EOL resistors (120 Ω) at both ends.
- C** All Modbus meters are connected with the Energy Analyzer QA/S 4.xx.1 in any structure (star, tree, line, ...).

Line structure with EOL resistors

Commissioning

Connecting to the device and commissioning wizard

ABB EQmatic Energy Analyzer QA/S x.yy.1

Commissioning requirements

- PC/laptop with web browser for commissioning and operating
- ETS (Engineering Tool Software) is used to parametrize the QA/S 1.16.1 KNX
- The QA/S is ready for operation and a LAN connection is established
- The PC/laptop and the QA/S are in the same IP network (read out IP address of QA/S with the i-bus Tool or a network scanner tool)
- Meters are operating and connected to M-Bus/Modbus/KNX on the QA/S
- The M-Bus/Modbus/KNX devices comply with the current standard
- The M-Bus and Modbus devices are connected and configured according to manufacturer's instructions (e.g. speed, primary address, transformer ratios, etc.)

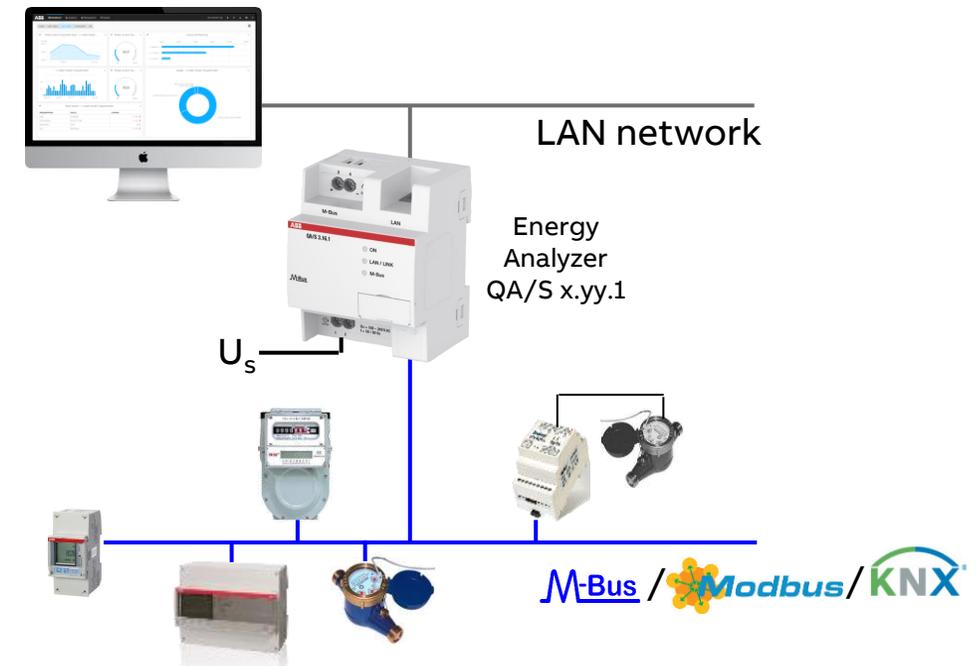

ABB EQmatic Energy Analyzer QA/S x.yy.1

Example: Set the wired M-Bus interface

1. Select “SET” in the main menu and press 
2. Select “M-Bus” and press 
3. Press  once to get to the next menu “Baud”
 - The display will show the baud rate
 - Set baud rate (e.g. 9600)
4. Press  once to get to the next menu “Address”
 - The display will show the address
 - Set address (e.g. 001)

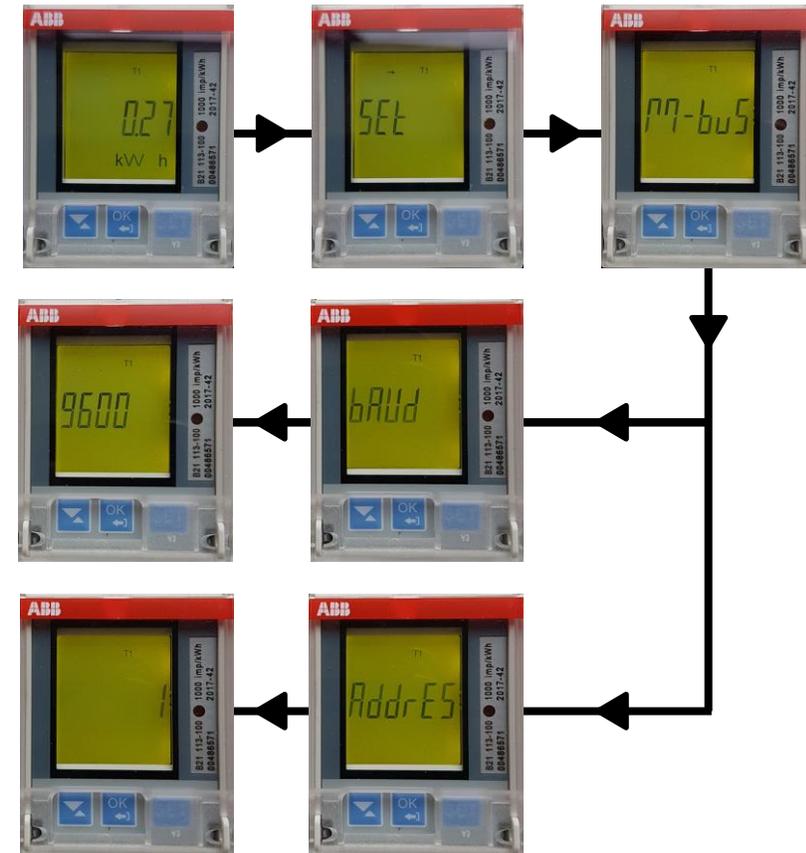

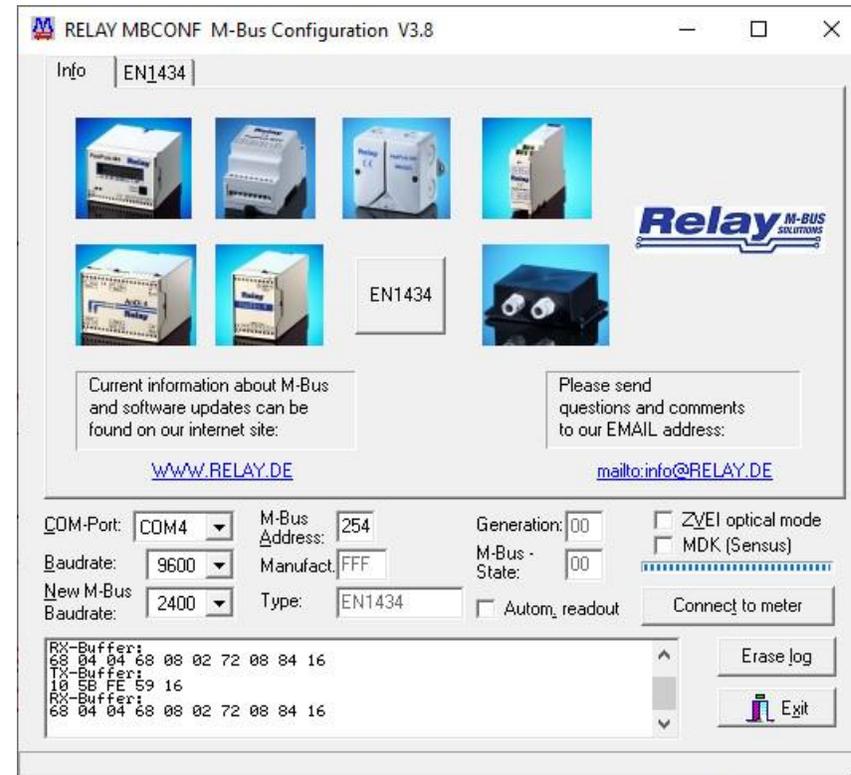

ABB EQmatic Energy Analyzer QA/S x.yy.1

Configuration of M-Bus devices

- M-Bus devices (slaves) are often delivered with an unknown primary address or primary address "0"
- Settings can be made with an interface and configuration software
 - Primary address
 - ID (secondary address)
 - Initial meter reading (counter)
 - Current date and time
 - Medium (water, energy,...)

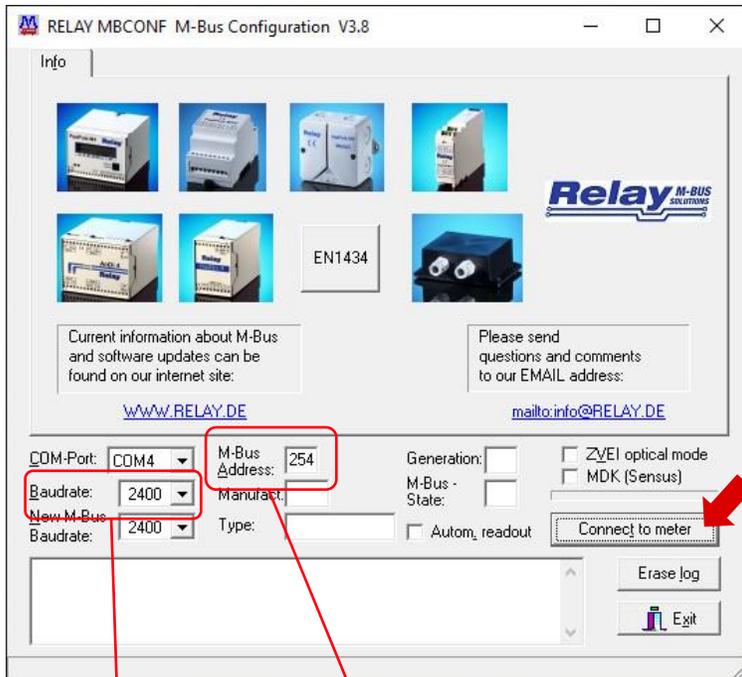

M-Bus master with USB-Interface

Source: www.relay.de/en/

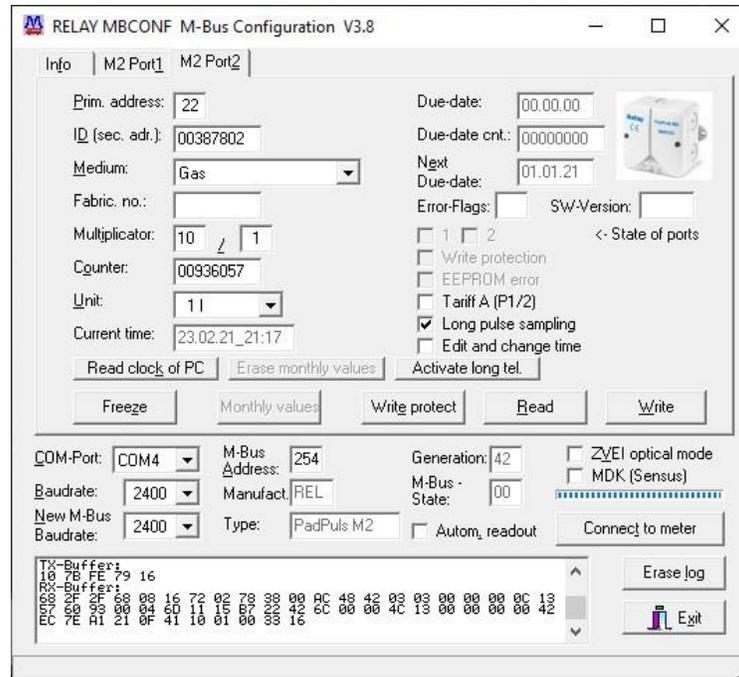

ABB EQmatic Energy Analyzer QA/S x.yy.1

Configuration of M-Bus devices

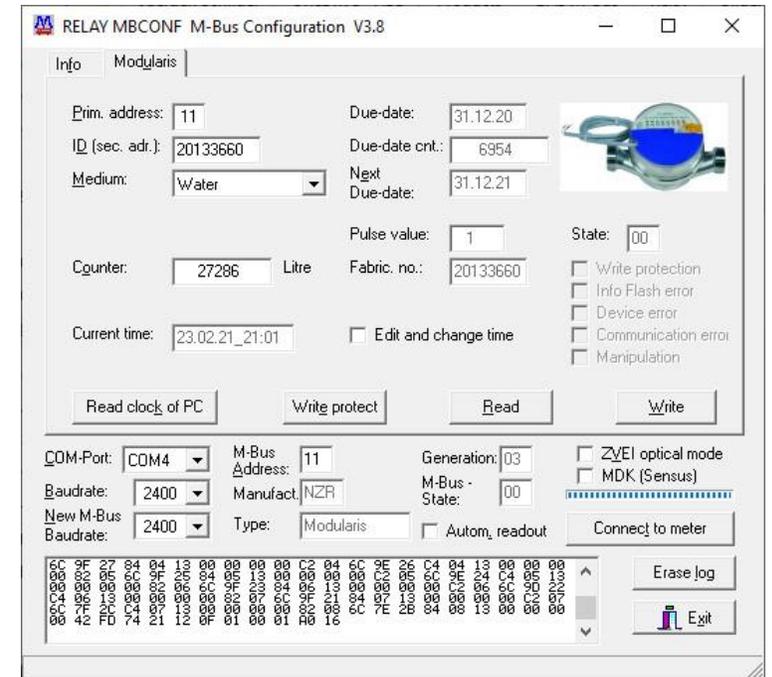

Speed (baud rate)

Primary address 0...250 or 254 for broadcast

Gas meter (pulse adapter)

Water meter

ABB EQmatic Energy Analyzer QA/S x.yy.1

Commissioning steps: The steps are identical except for scanning the connected meters

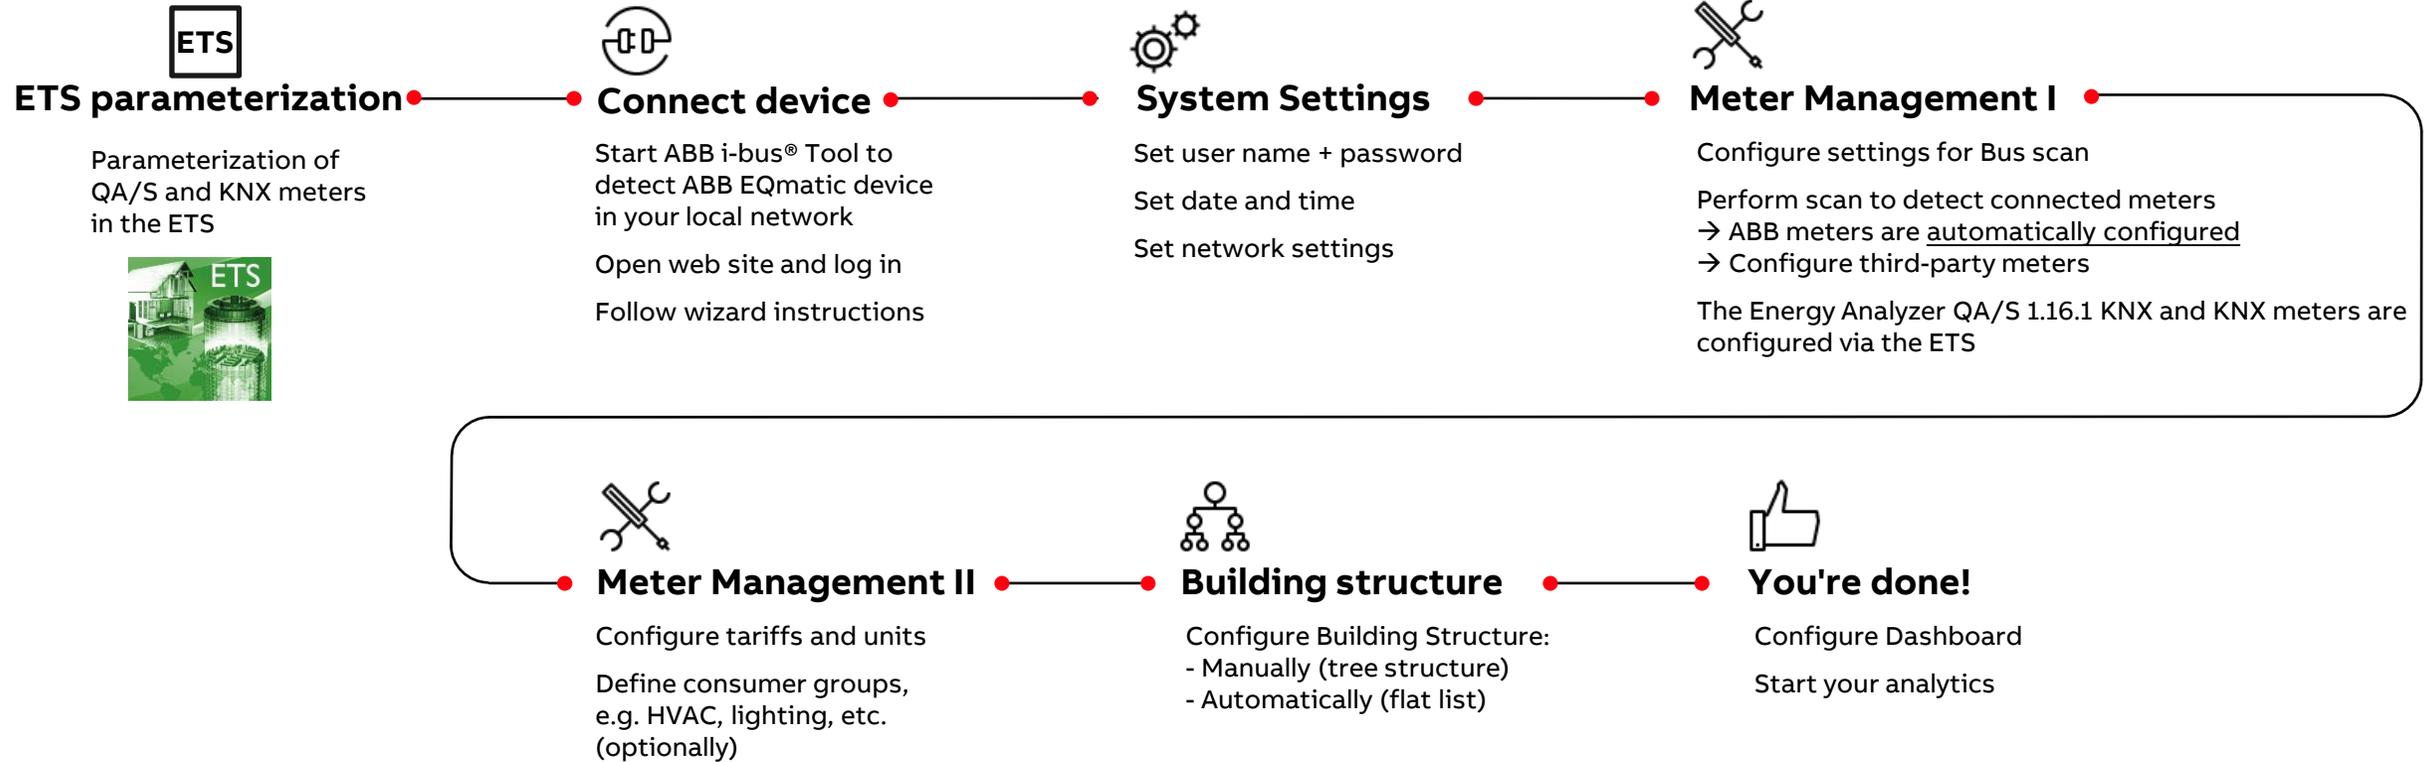

ABB EQmatic Energy Analyzer QA/S x.yy.1

Commissioning Energy Analyzer QA/S 1.16.1 KNX

To display and process the QA/S values of KNX meters, both the QA/S and the KNX meters must first be configured and parametrized in ETS

- Add the QA/S and KNX meters to the project
- Set the parameters of the QA/S and KNX meters, e.g.
 - Date and time source (KNX, User Interface or time server)
 - Meter settings: Meter Interface Module ZS/S, Energy Actuator SE/S, Energy Module EM/S, Electricity (generic), Gas (generic), Water (generic), Heat (generic)
 - Load control
- Assign group addresses
- Download individual address and application programs

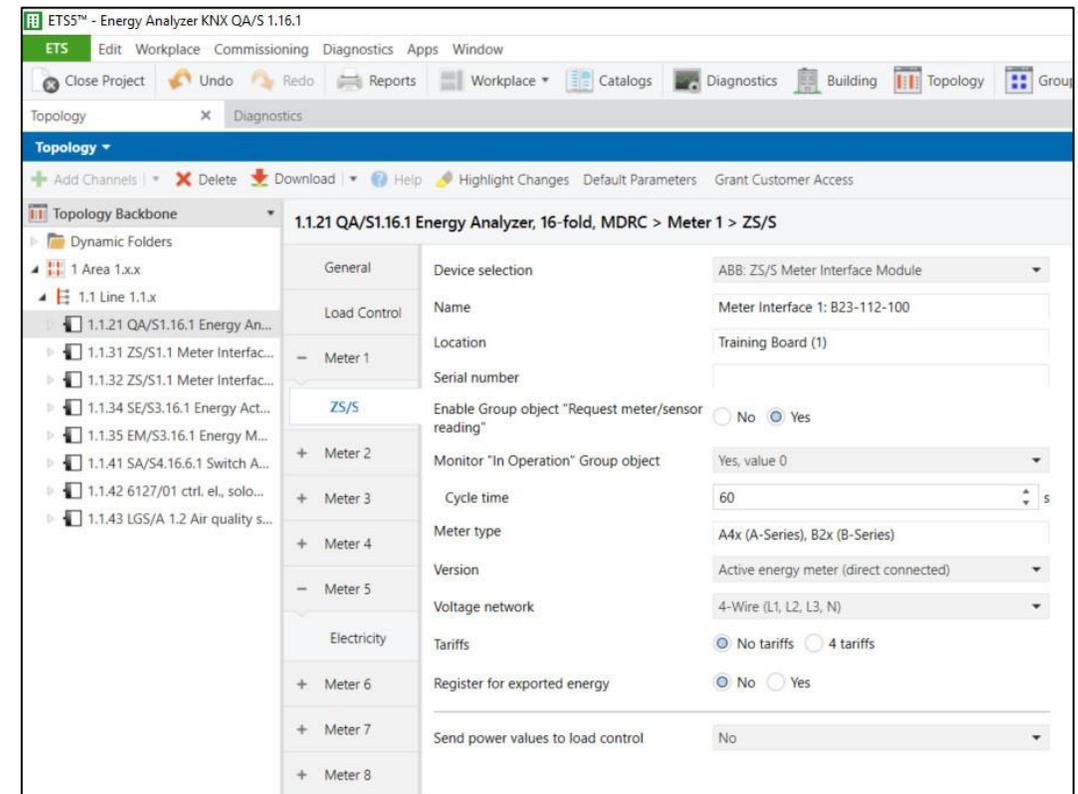

ABB EQmatic Energy Analyzer QA/S x.yy.1

Access via the ABB i-bus® Tool

- The ABB i-bus® Tool is free software that provides help with commissioning
- The device can be accessed with the ABB i-bus® Tool during initial commissioning
- IP address assignment in the QA/S is set to automatic addressing (DHCP/autoIP) at the factory, and the IP address can be read with the ABB i-bus® Tool
- Download the ABB i-bus® Tool and install it on the Windows PC/laptop
- Download link: www.abb.com/knx

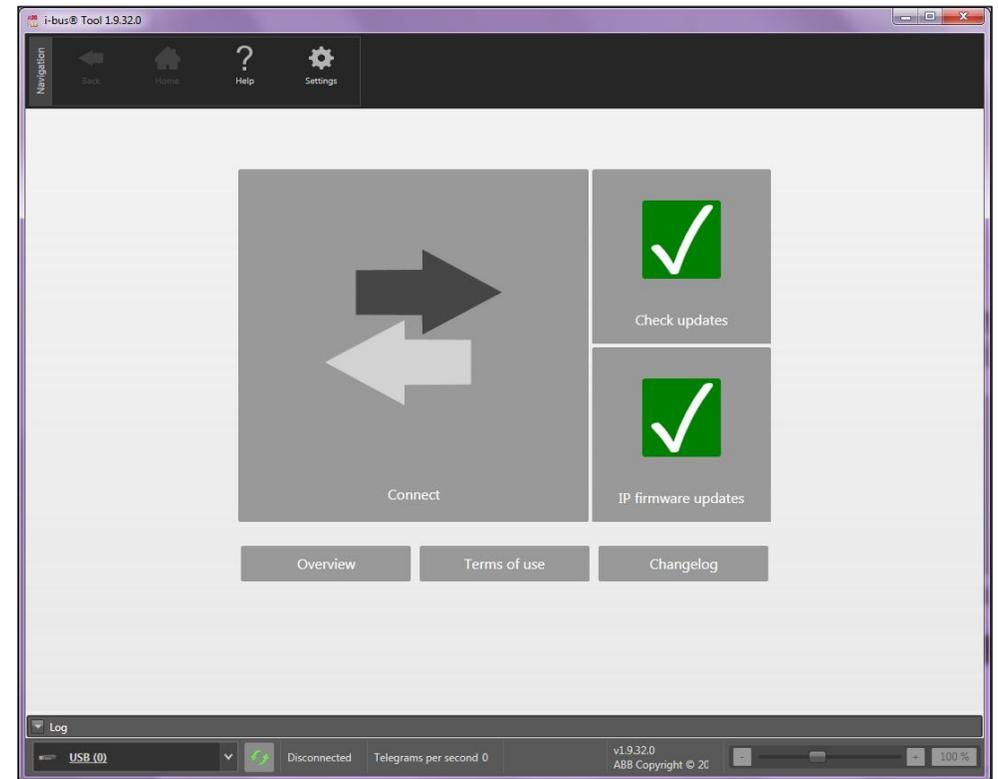

ABB EQmatic Energy Analyzer QA/S x.yy.1

Access via the ABB i-bus® Tool

Start the ABB i-bus® Tool

Click:

- “Connect”
- “IP devices”
- “Discovery”

The ABB i-bus® Tool automatically searches for known IP devices in the local network

Select the desired Energy Analyzer QA/S from the table (click)

Click the “Open Website” button

The default web browser opens, and the start screen of the Energy Analyzer appears

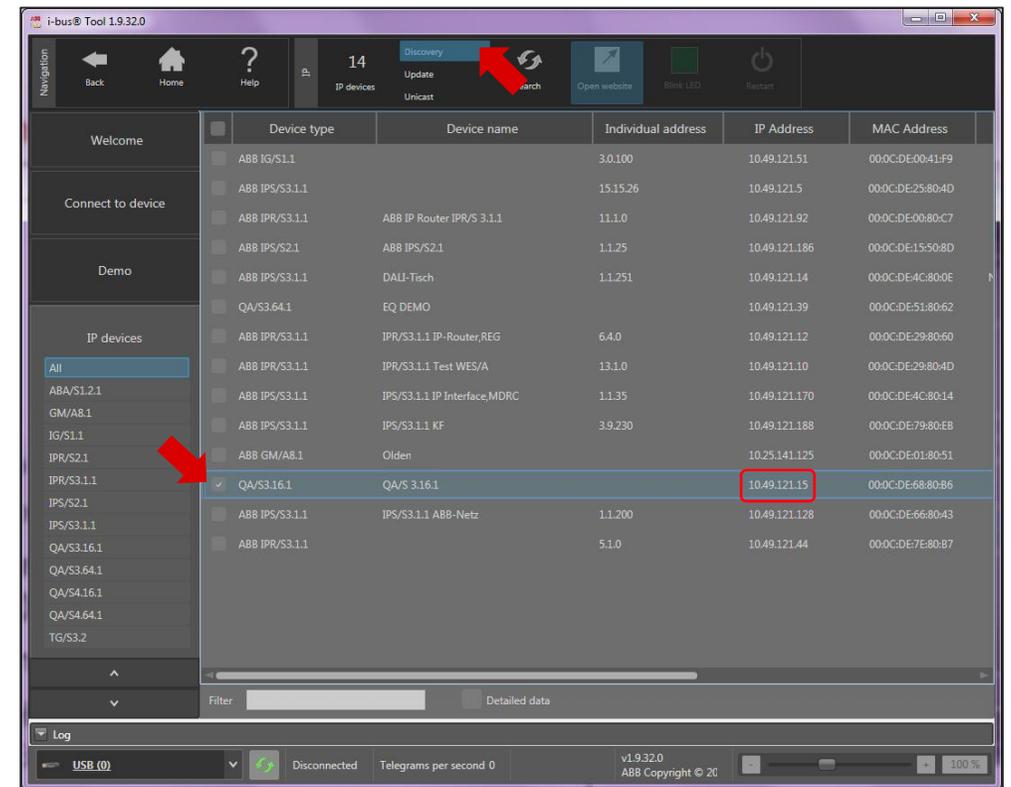

ABB EQmatic Energy Analyzer QA/S x.yy.1

User interface

The connection to the device's web server is established

Enter the user name and the password

Default user name and password on delivery

- Username: admin
- Password: admin

Follow the instructions in the commissioning wizard to proceed with commissioning

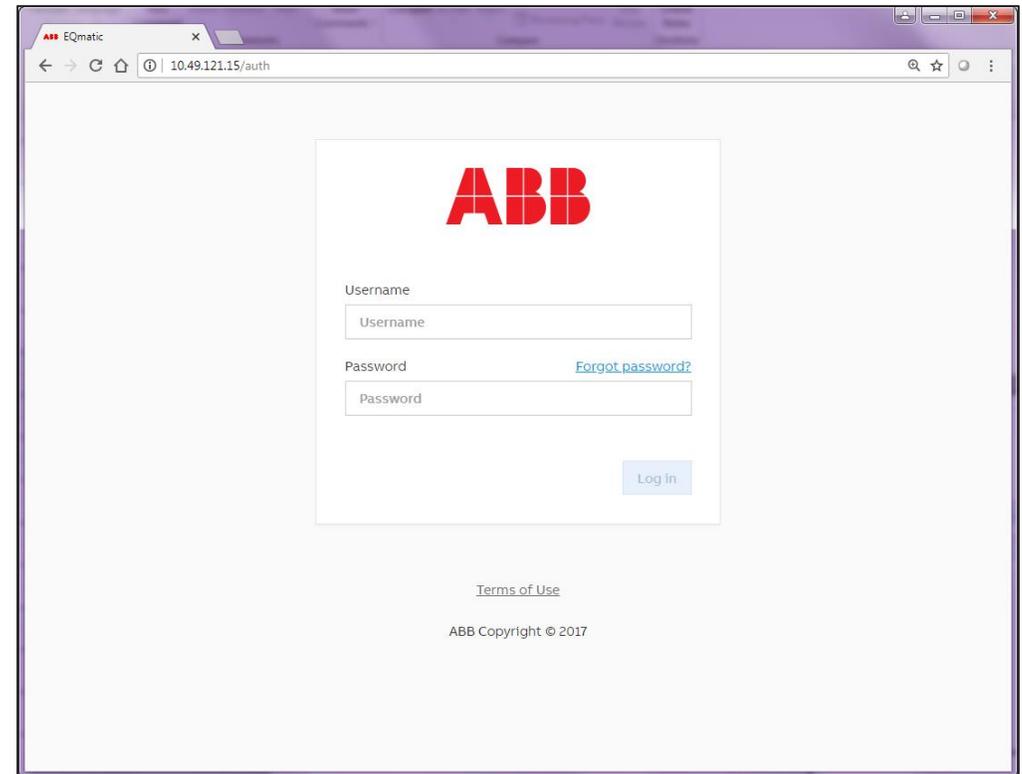

ABB EQmatic Energy Analyzer QA/S x.yy.1

Commissioning wizard (1)

Once a connection to the device is established, the commissioning wizard starts for the first time

The steps are identical except for scanning the connected meters (M-Bus or Modbus)

It guides the user through the steps and basic settings required for initial commissioning

- Read and confirm the terms and conditions of use
- Change the default password
 - This is important for device and data security
 - The password is expected to be at least 9 characters long and contain capital letters, small letters and non-letter (numeric or special) symbols

Introduction Completed: 0%

Welcome

In order to use the device, an initial configuration is required. Please follow the steps of the wizard to configure the device.

ABB EQmatic Energy Analyzer QA/S x.yy.1

QA/S 3.xx.1 M-Bus: Commissioning wizard (5):

Scanning via the primary address

- The search for devices connected is based on their primary address
 - Each M-Bus device must be assigned to a unique primary address
 - Duplicate addresses cause address conflicts!
- The primary addresses must be set beforehand on the relevant M-Bus devices
- Address range: 1...250
 - Set the limits for the primary address range
- Speed range (baud rate): 300, 600, 1200, 2400, 4800, 9600
 - Set the speed range used for scanning for M-Bus devices connected

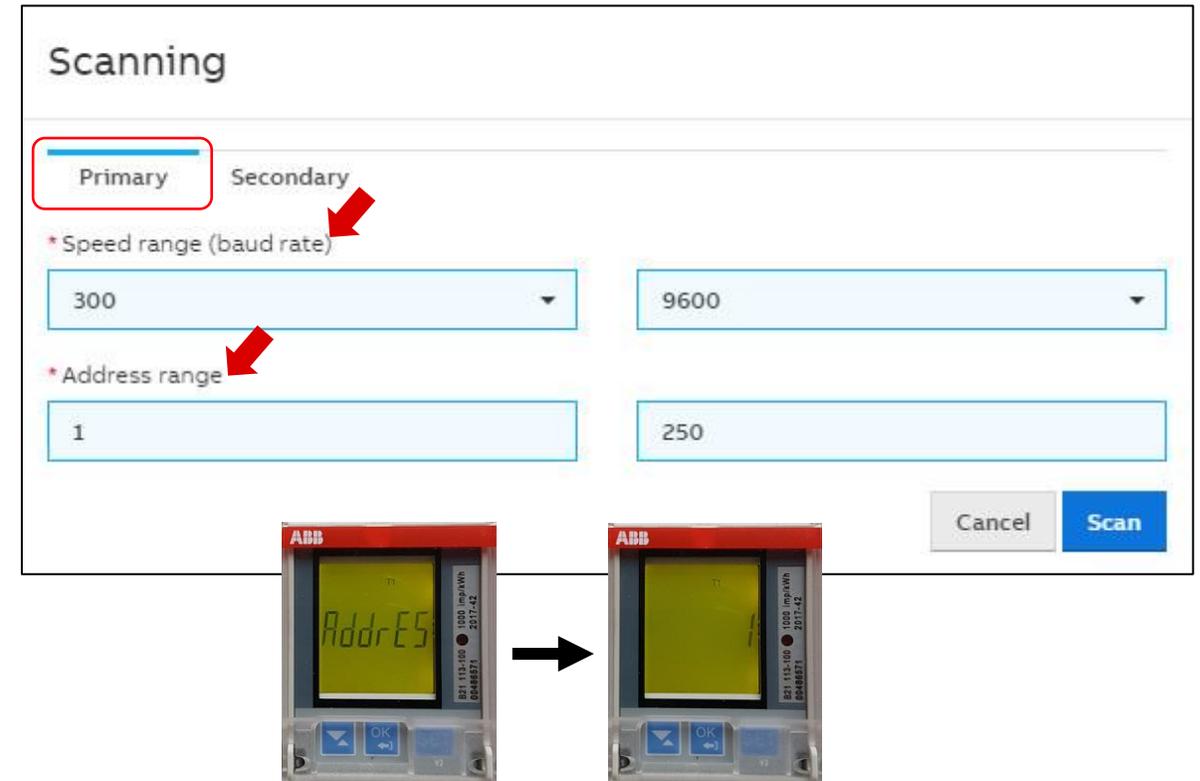

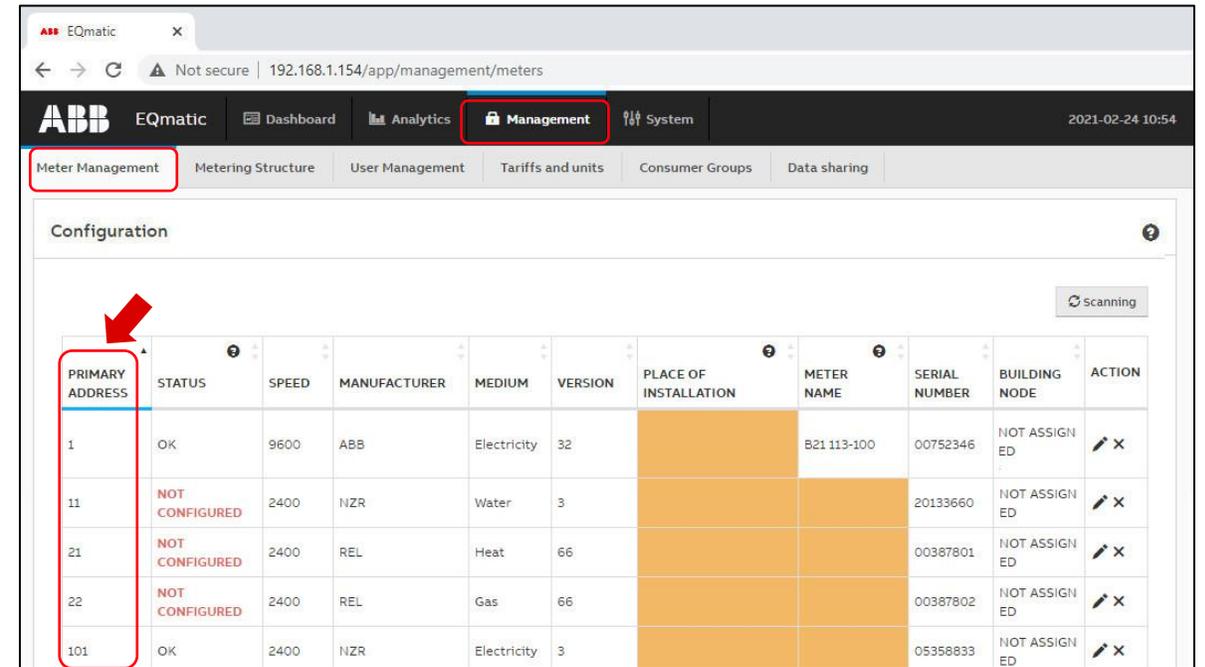

ABB EQmatic Energy Analyzer QA/S x.yy.1

QA/S 3.xx.1 M-Bus: Commissioning wizard (5):

Scanning via the primary address

- The search for devices connected is based on their primary address
 - Each M-Bus device must be assigned to a unique primary address
 - Duplicate addresses cause address conflicts!
- The primary addresses must be set beforehand on the relevant M-Bus devices
- Address range: 1...250
 - Set the limits for the primary address range
- Speed range (baud rate): 300, 600, 1200, 2400, 4800, 9600
 - Set the speed range used for scanning for M-Bus devices connected

The screenshot shows the ABB EQmatic web interface. The 'Management' menu is highlighted in red. Below it, the 'Meter Management' sub-menu is also highlighted. A table titled 'Configuration' is displayed, showing a list of detected meters. A red arrow points to the 'PRIMARY ADDRESS' column header. The table has columns for PRIMARY ADDRESS, STATUS, SPEED, MANUFACTURER, MEDIUM, VERSION, PLACE OF INSTALLATION, METER NAME, SERIAL NUMBER, BUILDING NODE, and ACTION. The data rows are as follows:

PRIMARY ADDRESS	STATUS	SPEED	MANUFACTURER	MEDIUM	VERSION	PLACE OF INSTALLATION	METER NAME	SERIAL NUMBER	BUILDING NODE	ACTION
1	OK	9600	ABB	Electricity	32		B21 113-100	00752346	NOT ASSIGNED	✎ ✕
11	NOT CONFIGURED	2400	NZR	Water	3			20133660	NOT ASSIGNED	✎ ✕
21	NOT CONFIGURED	2400	REL	Heat	66			00387801	NOT ASSIGNED	✎ ✕

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Meter Management: QA/S 1.16.1 KNX

All KNX devices are shown along with their information in the overview table below

METER NUMBER	STATUS	PRODUCT TYPE	MEDIUM	PLACE OF INSTALLATION	METER NAME	SERIAL NUMBER	ACTION
1	OK	ZS/S	Electricity	Training Board (1)	Meter Interface 1: B23 -112-100	85674123	
2	OK	ZS/S	Electricity	Training Board (2)	Meter Interface 1: B21 -113-100	54129489	
3	OK	SE/S	Electricity	Training Board (3)	Energy Actuator 1: S E/S	1978563	

Meter Number	Indicates the meter number as configured in ETS
Status	OK: Meter configured and connected. Reading enabled. ERROR, possible causes: <ul style="list-style-type: none">• Installation error (L and N transposed)• IR communication error (only with ZS/S)• Hardware fault• Reading disabled (only with SE/S and EM/S)
Product Type	DISCONNECTED: Device not connected to bus or has no power supply.
Medium	Displays the product in use (e.g. ZS/S) depending on the selection made in ETS
Place of installation	Displays the medium to be measured on the device The installation location must be entered in ETS. This is recommended so that the device is easier to identify and assign when configuring the metering structure. Duplicate names are allowed.
Meter Name	The meter name must be entered in ETS. This is recommended so that the device is easier to identify and assign when configuring the metering structure. Duplicate names are allowed.
Serial Number	The serial number must be entered in ETS. This is recommended so that the device is easier to identify and assign when configuring the metering structure.
Action	A view of the available data points for the meter. Opens the information and table view for the available data points. All of the meter's data points are listed in the table even if the meter is not linked with a group address via ETS, in which case the data point is shown as "0" in the table.

ABB EQmatic Energy Analyzer QA/S x.yy.1

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Meter Management: QA/S 3.xx.1 M-Bus

- The *Meter Management* menu is used to make all the settings for the detection of M-Bus devices connected
- This scan or scanned by commissioning wizard is absolutely essential during commissioning to be able to add, configure and manage devices
- After the scan, all M-Bus devices detected are listed in a table
- It is the basis for assigning devices to the metering structure later on
- Scanning can take several minutes depending on the scan settings and the number of M-Bus devices
- Limit the scan range as much as possible to reduce the scanning process time

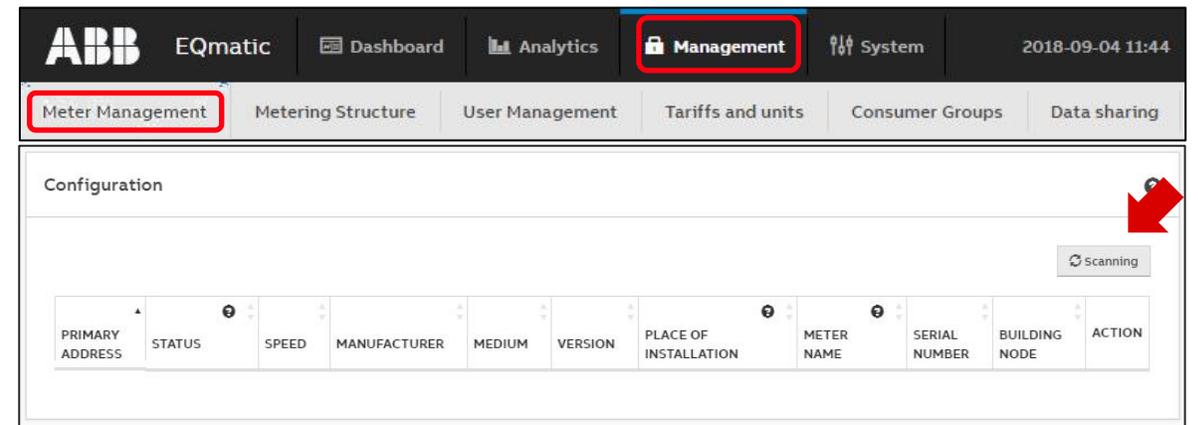

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Meter Management: QA/S 3.xx.1 M-Bus

This scanning process uses either primary or secondary addressing

Primary:

- The primary addresses must be set before-hand on the relevant device (M-Bus slave)
- The primary address is pre-set to “0” on ABB meters in the factory
- Each M-Bus device must be assigned a unique primary address (1 ... 250)
- Duplicate addresses cause address conflicts!

The screenshot displays the ABB EQmatic Management interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below this, a secondary navigation bar shows 'Meter Management' (highlighted with a red box), 'Metering Structure', 'User Management', 'Tariffs and units', 'Consumer Groups', and 'Data sharing'. The main content area shows a 'Scanning' dialog box with 'Primary' addressing selected (highlighted with a red box). The dialog includes fields for 'Speed range (baud rate)' (300 and 9600) and 'Address range' (1 and 250). Below the dialog is a 'Configuration' table with columns: PRIMARY ADDRESS, STATUS, SPEED, MANUFACTURER, MEDIUM, VERSION, PLACE OF INSTALLATION, METER NAME, SERIAL NUMBER, BUILDING NODE, and ACTION. The first three rows of the table are highlighted with a red box.

PRIMARY ADDRESS	STATUS	SPEED	MANUFACTURER	MEDIUM	VERSION	PLACE OF INSTALLATION	METER NAME	SERIAL NUMBER	BUILDING NODE	ACTION
1	OK	9600	ABB	Electricity	32		B21 113-100	00486571	NOT ASSIGNED	✕
2	OK	9600	ABB	Electricity	32		B21 113-100	00486574	NOT ASSIGNED	✕
11	OK	2400	ACW	Gas	20			10010545	NOT ASSIGNED	✕

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Meter Management: QA/S 3.xx.1 M-Bus

Secondary:

- Scan based exclusively on secondary address
- There is no unique (primary) addressing in the related M-Bus device
- The devices respond with speed, manufacturer, medium, version and serial number
- The device serial number is generally used as the secondary address
- It is an 8-digit number printed to the device
- The serial number of ABB meters is on the nameplate on the front of the device, e.g. 00486571

The screenshot shows the ABB EQmatic Management interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below the navigation bar, the 'Meter Management' menu item is also highlighted with a red box. The main content area displays a 'Scanning' dialog box with 'Secondary' selected under the 'Primary' section. The 'Speed range (baud rate)' is set to 300 and 9600. Below the dialog, a 'Configuration' table is shown with the following data:

PRIMARY ADDRESS	STATUS	SPEED	MANUFACTURER	MEDIUM	VERSION	PLACE OF INSTALLATION	METER NAME	SERIAL NUMBER	BUILDING NODE	ACTION
-	OK	9600	ABB	Electricity	32		B21 113-100	00486571	NOT ASSIGNED	✕
-	OK	9600	ABB	Electricity	32		B21 113-100	00486574	NOT ASSIGNED	✕
-	OK	2400	ACW	Gas	20			10010545	NOT ASSIGNED	✕

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Meter Management: QA/S 3.xx.1 M-Bus

After a successful scan, all detected M-Bus devices are shown along with their information in the overview table below

PRIMARY ADDRESS	STATUS	SPEED	MANUFACTURER	MEDIUM	VERSION	PLACE OF INSTALLATION	METER NAME	SERIAL NUMBER	BUILDING NODE	ACTION
1	OK	9600	ABB	Electricity	32	DB - 3rd floor	Lighting (B21 313-100)	00406880	Lighting 3rd floor	 
5	OK	9600	ABB	Electricity	32	DB - 3rd floor	Air conditioning (B23 313-100)	00433874	Air conditioning 3rd floor	 

Primary address	Shows the primary address set in the M-Bus device.
Status	OK: Meter detected, configured and connected Collision: Address conflict. Devices with same primary address or identical serial number Not configured: Device is not configured. Click on edit button. Disconnected: Device is not available or is disconnected from the M-Bus.
Speed	Shows the speed set in the M-Bus device
Manufacturer	Shows the manufacturer (max. 3 characters, e.g. ABB)
Medium	Shows which medium is measured by the M-Bus device
Version	Shows the firmware version in the M-Bus device
Place of installation	Enter the place the device is installed here. This action is recommended so that the device is easier to identify and assign on configuring the metering structure. Duplicate names are allowed.
Meter name	For ABB meters, the type designation is used by default as the device name after a scan. This can be overwritten. Enter a name for the device here. This action is recommended so that the device is easier to identify and assign on configuring the metering structure. Duplicate names are allowed.
Serial number	Shows the serial number (= secondary address) of the M-Bus device
Assignment	Shows the assignment of the M-Bus device based on the metering structure configured
Action	Used to edit and configure the M-Bus device (opens the window for configuring the meter or removes the M-Bus device from the system).

Meter Management: QA/S 4.xx.1 Modbus

- The *Meter Management* menu is used to make all the settings for the detection of Modbus devices connected
- After the scan, all Modbus devices detected are listed in a table
- This scan or scanned by commissioning wizard is absolutely essential during commissioning to be able to add, configure and manage devices
- It is the basis for assigning devices to the metering structure later on
- In the supplied state, the meter models and the register mapping are saved with data points for ABB EQ meters of type A4x, B2x and M2M
- As an alternative to a scan, devices can also be added manually to the system

The screenshot displays the ABB EQmatic web interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below this, a secondary menu shows 'Meter Management' (also highlighted with a red box), 'Metering Structure', 'User Management', 'Tariffs and units', 'Consumer Groups', and 'Data sharing'. The main content area is titled 'Configuration' and has three tabs: 'Meters', 'Meter models', and 'Register mappings'. The 'Meters' tab is active. On the right side of the 'Meters' tab, there is a 'Scanning' button and an '+ Add' button, with a red arrow pointing to the '+ Add' button. Below the tabs is a table with the following columns: PRIMARY ADDRESS, STATUS, SPEED, MANUFACTURER, MEDIUM, VERSION, PLACE OF INSTALLATION, METER NAME, SERIAL NUMBER, BUILDING NODE, and ACTION.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Meter Management: QA/S 4.xx.1 Modbus

To scan the bus for meters connected, first the speed range (speed), address range, parity, byte size and stop bits must be set

- The primary addresses must be set before-hand on the relevant devices (Modbus slaves)
- Each Modbus device must be assigned a unique primary address (1 ... 247)
- Duplicate addresses cause address conflicts!
- ABB meters are supplied from the factory with the primary address “1”, speed “19,200”, parity “even”, byte size “8” and stop bits “1”

Scanning can take several minutes depending on the scan settings and the number of Modbus devices

Limit the scan range as much as possible to reduce the scanning process time

The screenshot shows the ABB EQmatic Management interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below the navigation bar, the 'Meter Management' menu item is also highlighted with a red box. The main content area displays a 'Scanning' configuration dialog with the following settings: Speed range (baud rate) set to 1200 and 115200; Address range set to 1 and 247; Parity set to None, Odd, and Even; Byte size set to 7, 8, and 9; and Stop bits set to 1 and 2. Below the dialog, the 'Configuration' table is shown with a red box highlighting the 'PRIMARY ADDRESS' column. The table contains two rows of meter data.

PRIMARY ADDRESS	STATUS	SPEED	MANUFACTURER	MEDIUM	VERSION	PLACE OF INSTALLATION	METER NAME	SERIAL NUMBER	BUILDING NODE	ACTION

Meter Management: QA/S 4.xx.1 Modbus

To configure or add new Modbus devices, it is necessary to define the meter model as well as the register mapping and related data points

General procedure to add to the Energy Analyzer a new Modbus device that is not yet saved in the system:

1. Add meter model
2. Select register mapping or configure new mapping
3. Configure data points for register mapping
4. Start scan or add device manually

Here the register mapping and device model can be added in any order

Metering Structure

This function is used to specify the required metering structure for the building or infrastructure

This makes navigation easier when carrying out analyses later on

Data aggregation or totals settings are also made here

There are various options available

- Manual Structure
- Automatic Structure
This structure is additionally created when the M-Bus or Modbus is scanned for devices or slaves with the commissioning wizard

The screenshot displays the ABB EQmatic Management interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below this, a secondary menu shows 'Meter Management', 'Metering Structure' (highlighted with a red box), 'User Management', 'Tariffs and units', 'Consumer Groups', and 'Data sharing'. The main content area is titled 'Metering structure configuration' and features a search bar, a tree view under 'Main building' with items like 'Air conditioning 3rd floor', 'Lighting 3rd floor', 'Printer 3rd floor', and 'Water 3rd floor', and a legend on the right with entries for 'Virtual meter', 'Metering point', 'Medium', and 'Difference'.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Metering Structure

- The “Automatic metering structure” created with the commissioning wizard or an existing metering structure can be removed by deleting the main node
- A selection button for creating a manual or automatic metering structure is then displayed
- An automatically created metering structure can be manually edited and changed as required at any time

The screenshot displays the ABB EQmatic Management interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below this, a secondary navigation bar shows 'Meter Management', 'Metering Structure' (highlighted with a red box), 'User Management', 'Tariffs and units', 'Consumer Groups', and 'Data sharing'. The main content area is titled 'Metering structure configuration'. It features a search bar, a tree view of nodes (root, ABB B21 313-100, ABB B23 313-100), and a legend with 'Virtual meter' and 'Metering point'. A context menu is open over the 'root' node, showing options: 'Create sub node', 'Edit node', and 'Remove node'. Red arrows point to the search bar, the 'root' node, and the 'Remove node' option.

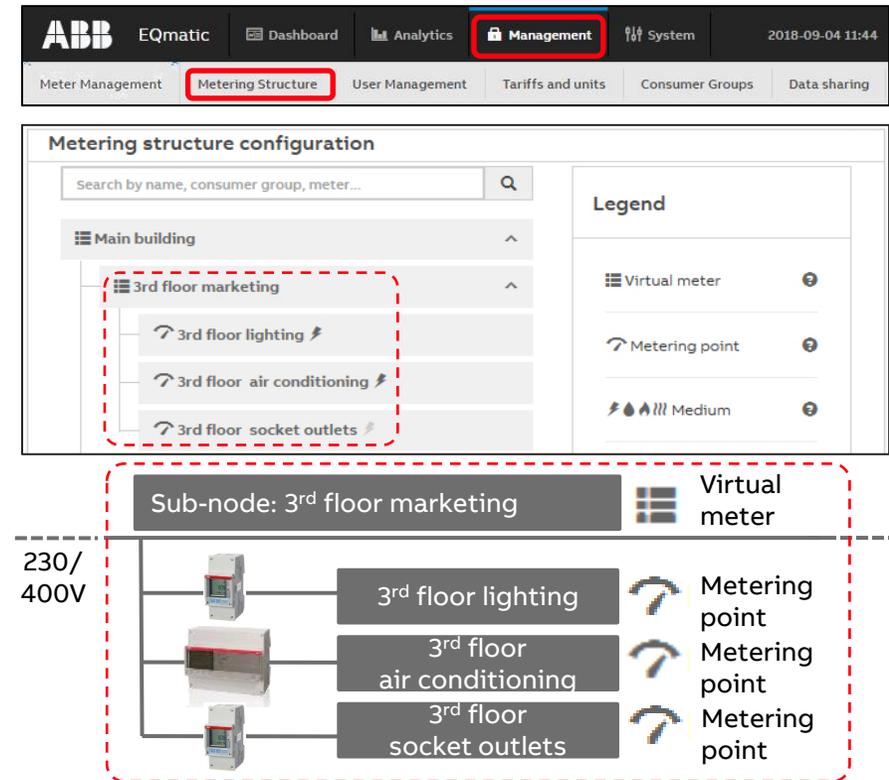

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Metering Structure

It can consist of the following sub-nodes:

-  **Virtual meter**
No meters can be assigned. It summarizes consumption and/or measured data from subordinate nodes (additional virtual meters or metering points) of the first level in the tree structure
-  **Metering point**
A metering point only ever consists of one meter assigned to it
-  **Difference**
It is automatically created and calculated and indicates the difference between the collected data of the superordinate node and the sum of the collected data of the sub-nodes

The screenshot displays the ABB EQmatic Management interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted), and 'System'. Below the navigation bar, the 'Metering Structure' menu item is selected. The main content area shows the 'Metering structure configuration' page with a search bar and a tree view. The tree view shows a hierarchy: 'Main building' > '3rd floor marketing' > '3rd floor lighting', '3rd floor air conditioning', and '3rd floor socket outlets'. A legend on the right identifies the icons for 'Virtual meter', 'Metering point', and 'Medium'. A red dashed box highlights the '3rd floor marketing' sub-node, which is a virtual meter containing three metering points. Below the screenshot, a diagram shows the physical connection of these metering points to a 230/400V supply.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Metering Structure

It can consist of the following sub-nodes:

-  **Virtual meter**
No meters can be assigned. It summarizes consumption and/or measured data from subordinate nodes (additional virtual meters or metering points) of the first level in the tree structure
-  **Metering point**
A metering point only ever consists of one meter assigned to it
-  **Difference**
It is automatically created and calculated and indicates the difference between the collected data of the superordinate node and the sum of the collected data of the sub-nodes

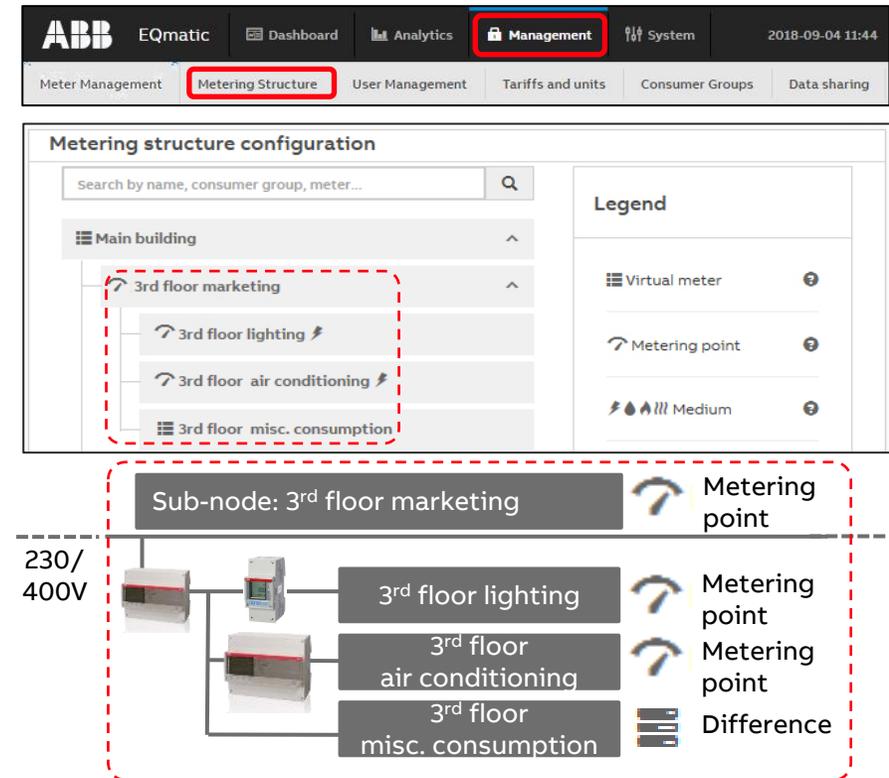

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Metering Structure: Automatic Structure

- With the Automatic Structure, a configuration window for the main node opens
- Here, you need to enter the name of the building to which the meters are assigned, for example
- Detected and configured devices are then automatically displayed in a flat (non-nested) list under the main node
- The main node represents a virtual meter
- This aggregates data points or values that can be physically added together (e.g. energy in kWh, power in W) in the main node

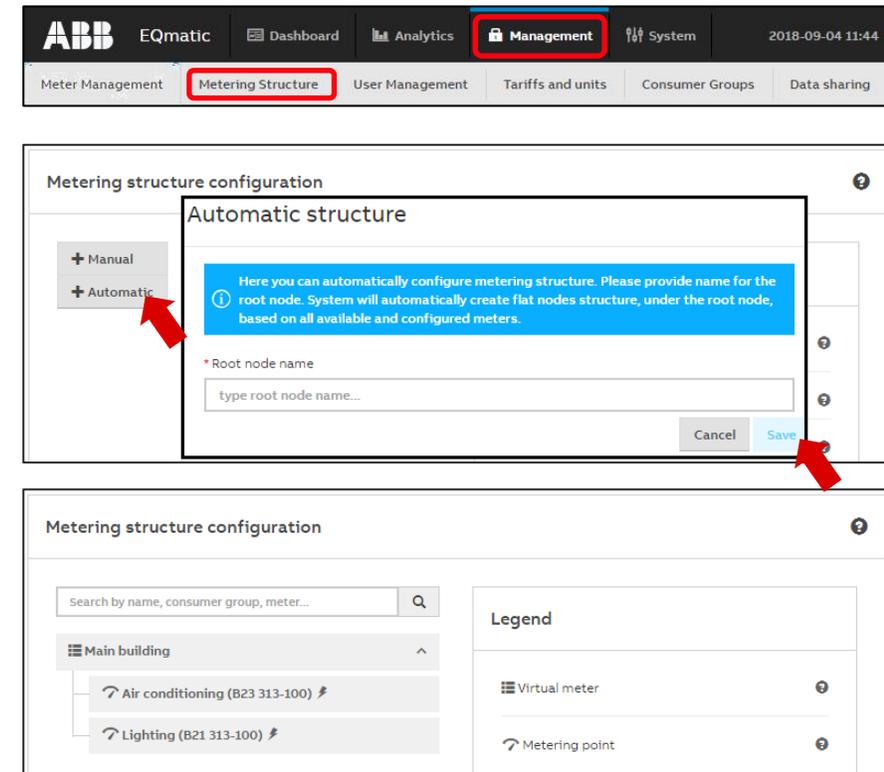

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Metering Structure: Manual Structure

- The Manual Structure allows you to set up a custom topology (main and sub-nodes)
- With a Manual Structure, physical meters are assigned to a logical metering structure
- The Manual Structure can be used, for example, to show consumers and costs for a cost center or an organization
- The Metering Point and Virtual Meter structural elements are provided for this purpose

The screenshot displays the ABB EQmatic Management interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below this, a secondary menu shows 'Meter Management', 'Metering Structure' (highlighted with a red box), 'User Management', 'Tariffs and units', 'Consumer Groups', and 'Data sharing'. The main content area is titled 'Automatic structure' and contains a blue information box: 'Here you can automatically configure metering structure. Please provide name for the root node. System will automatically create flat nodes structure, under the root node, based on all available and configured meters.' Below this is a text input field for 'Root node name' with the value 'Main building' and a 'Cancel' button. A red arrow points to the 'Manual' option in the left sidebar. Below the main content area is the 'Metering structure configuration' section, which includes a search bar, a tree view with 'Main building' selected, and a context menu with options: 'Create sub node', 'Edit node', and 'Remove node'. A legend on the right lists 'Virtual meter' and 'Metering point'.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Metering Structure: Manual Structure

Clicking on the configuration icon opens the sub-menu:

- Create sub-node:
A sub-node is created for the current node
 - Virtual Meter
 - Metering Point
 - Difference
- Edit:
The dialog window for editing a node is displayed
- Delete:
The node is deleted from the system
- The user can click and drag sub-nodes to move them in the structure

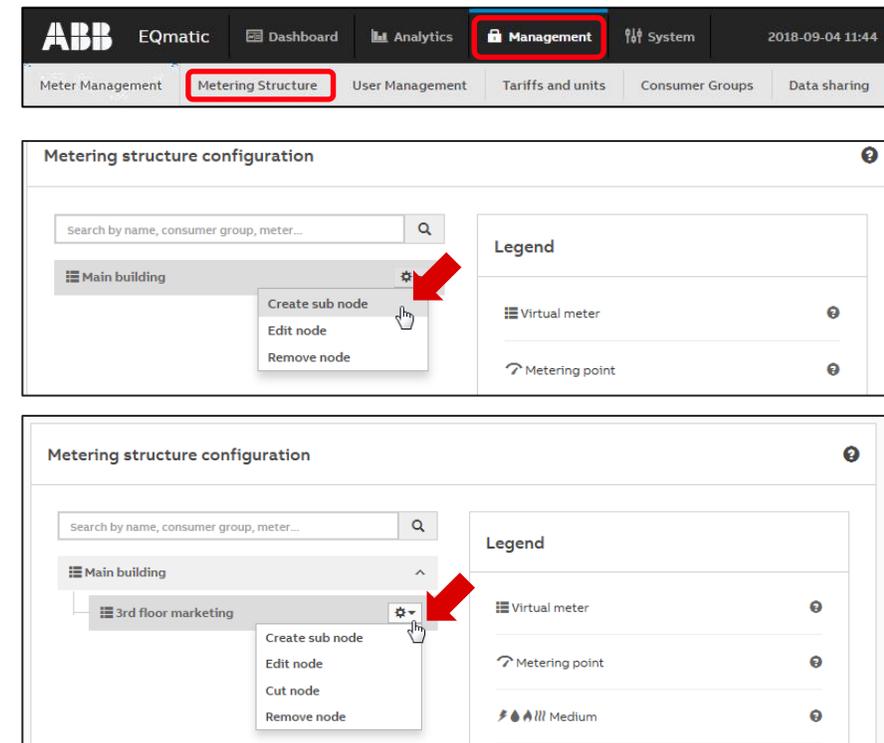

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Metering Structure: Manual Structure

Dialog window for editing a node

- Node type: Metering Point
- Name: Used to name the node
- Meter: This parameter links the node to a physical meter. Meters are only displayed for selection if they have been added to the system via Meter Management and correctly configured
- Medium: Here, enter and set the medium that you wish the metering point to log
- Consumer group: This is used to select and assign a consumer group
- Meter data points: This is used to select and assign a data point

The screenshot displays the ABB EQmatic Management interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below the navigation bar, a secondary menu shows 'Meter Management', 'Metering Structure' (highlighted with a red box), 'User Management', 'Tariffs and units', 'Consumer Groups', and 'Data sharing'. The main content area is divided into two sections:

Create node

* Node type: Metering point
* Node name: 3rd floor lighting
Meter: Electricity, ABB, Lighting (B21 313-100), DB- 3rd floor, #00406880
* Medium: Electricity
Consumer group: Select...
Meter data points:

TARIFF	METER TARIFF DATA POINT	ASSIGNED TARIFF
0	Active Imported Energy Tariff 0	default tariff
1	Active Imported Energy Tariff 1	default tariff

Metering structure configuration

Search by name, consumer group, meter... [Search icon]

- Main building
 - 3rd floor marketing
 - 3rd floor lighting
 - 3rd floor air conditioning

Legend

- Virtual meter
- Metering point

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

User Management

- In User Management you can add, configure and delete users
- You can add as many users as you wish
- Up to 10 users can access the system at any one time
- The language can be set and different access rights assigned to the users
- This function limits users to the areas they are authorized
- The email address is required to send users automatically reports or a message about resetting the password if the “password is forgotten“

The screenshot displays the ABB EQmatic web interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below this, a secondary menu shows 'Meter Management', 'Metering Structure', 'User Management' (highlighted with a red box), 'Tariffs and units', 'Consumer Groups', and 'Data sharing'. The main content area is divided into two sections: 'Users list' and 'User configuration'.

Users list

NAME	E-MAIL	ADMINISTRATOR	ACTION
admin		yes	 
Jue-ABB		yes	 
Heinz Becker		no	  

User configuration

User data | **Assign user rights**

- Main building
 - 3rd floor marketing
 - 3rd floor lighting
 - 3rd floor air conditioning
 - 3rd floor product management
 - 3rd floor R&D

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Tariffs and Units

- The tariff settings are used to configure tariffs
- This information is necessary for the subsequent calculation and display of costs
- Refer to your latest bill, or your contract, for details of your current tariff
- One tariff is pre-configured per medium from the factory; the costs per unit are set to "0."
- You can add further tariffs

The screenshot shows the ABB EQmatic web interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below this, a secondary navigation bar shows 'Meter Management', 'Metering Structure', 'User Management', 'Tariffs and units' (highlighted with a red box), 'Consumer Groups', and 'Data sharing'. The main content area displays 'Existing tariffs overview' with a '+ Add new' button. The table below lists the following data:

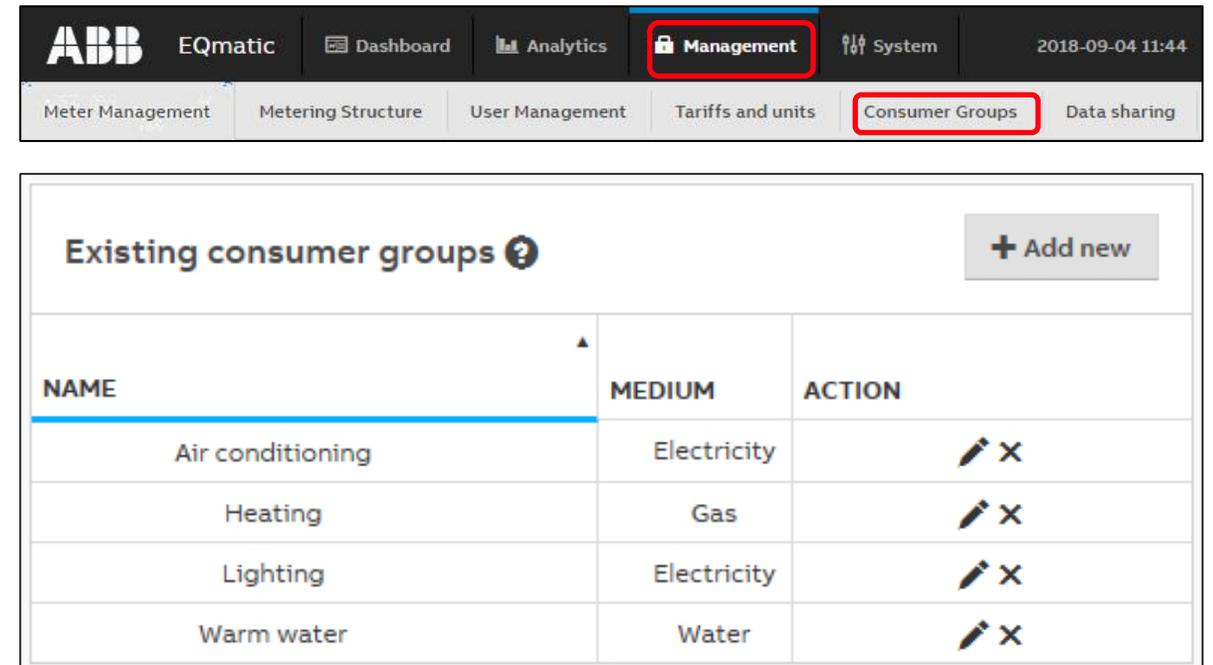

NAME	MEDIUM	COST PER UNIT	CO ₂ FACTOR	ACTION
Night tariff	Electricity	0.15 [EUR / 1 kWh]	0.527 [CO ₂ kg / kWh]	 
Default tariff	Electricity	0.25 [EUR / 1 kWh]	0.527 [CO ₂ kg / kWh]	
Default tariff	Water	3.9 [EUR / 1 m ³]	0 [CO ₂ kg / m ³]	
Default tariff	Gas	0.745 [EUR / 1 m ³]	2 [CO ₂ kg / m ³]	
Default tariff	Heat	0.265 [EUR / 1 kWh]	0.12 [CO ₂ kg / kWh]	

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Consumer Groups

- Consumer groups are used to evaluate costs and consumption by application in the *Analytics* → *Usage* menu
- For example, you can display electrical energy costs by consumer groups such as lighting, sockets and air conditioning
- In order to be able to do this, a separate meter must be installed and assigned to a consumer group via the *Management* → *Metering Structure* menu

The screenshot shows the ABB EQmatic Management interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below this, a secondary navigation bar shows 'Meter Management', 'Metering Structure', 'User Management', 'Tariffs and units', 'Consumer Groups' (highlighted with a red box), and 'Data sharing'. The main content area is titled 'Existing consumer groups' and features a '+ Add new' button. A table lists the following consumer groups:

NAME	MEDIUM	ACTION
Air conditioning	Electricity	 
Heating	Gas	 
Lighting	Electricity	 
Warm water	Water	 

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Data sharing via Modbus TCP

The data sharing functions below are used to forward and utilize measured data in higher-level systems (e.g. building management systems, SCADA or web services).

- Modbus TCP
- REST API

Both communication interfaces can be used at once

Note:
Using Modbus TCP and REST API requires IT programming expertise

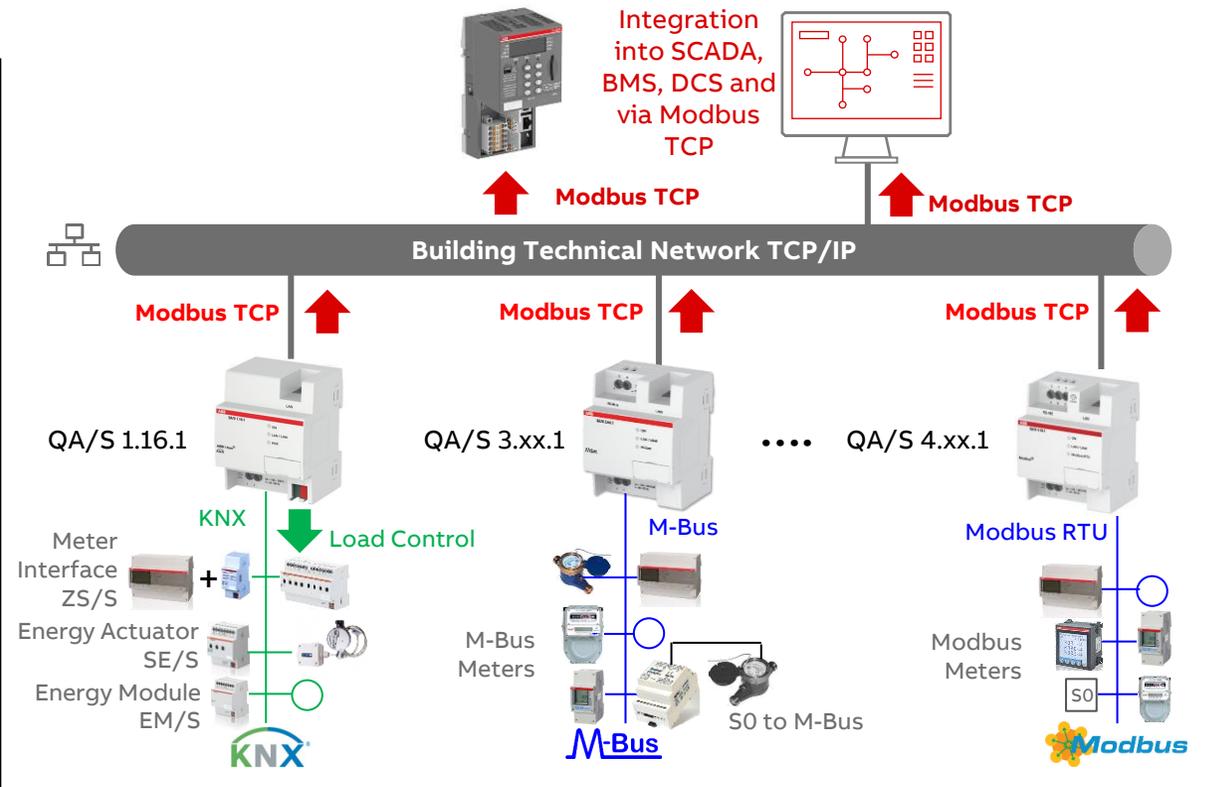

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Data sharing via Modbus TCP

- The data transfer via Modbus TCP function is available for forwarding and using measured data in higher-level systems (e.g. building management systems, SCADA etc.)
- A Client-server communication is established via Modbus TCP
- This communication requires a TCP connection to be set up between a client (e.g. a PC) and the server (e.g. the Energy Analyzer QA/S x.yy.1)
- The TCP port 502 reserved for Modbus is used for communication
- If there is a firewall between the server and client, it must be ensured the TCP port configured is opened

The screenshot shows the ABB EQmatic web interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below this is a secondary navigation bar with 'Meter Management', 'Metering Structure', 'User Management', 'Tariffs and units', 'Consumer Groups', and 'Data sharing' (highlighted with a red box). The main content area is titled 'Data sharing' and contains a 'Modbus TCP' tab (highlighted with a red box) and a 'Rest API' tab. There is a toggle for 'Enable static register mapping' and an 'Actions' dropdown. A table lists the following data:

<input checked="" type="checkbox"/>	TCP ENABLED	MODBUS TCP SLAVE ID	METER NUMBER	MANUFACTURER	SERIAL NUMBER	NAME	DATA POINTS
<input checked="" type="checkbox"/>	1	1	ABB		Meter Interface 1: B23-112-100	^	
<input checked="" type="checkbox"/>	2	2	ABB		Meter Interface 1: B21-113-100	^	
<input checked="" type="checkbox"/>	3	3	ABB		Energy Actuator 1: SE/S	^	
<input checked="" type="checkbox"/>	4	4	ABB		Energy Module 1: EM/S	^	
<input checked="" type="checkbox"/>	5	5	unknown		Energy Meter: Generic	^	
<input checked="" type="checkbox"/>	6	6	unknown		Gas Meter: Generic	^	
<input checked="" type="checkbox"/>	7	7	unknown		Water Meter: Generic	^	
<input checked="" type="checkbox"/>	8	8	unknown		Heat Meter: Generic	^	
<input checked="" type="checkbox"/>	9	9	unknown		Sensor: Measurement	^	

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Management”

Data sharing via REST API

- An API (Application Programming Interface) enables two programs to communicate with each other
- REST (Representational State Transfer) is mainly used by web browsers and is a common programming style for web services
- REST API provides easier access to lots of web services, e.g. If you need to set up your own cloud server or create a customer-specific application
- Data can be accessed using HTTP commands such as GET, PUT, POST, DELETE

The screenshot displays the ABB EQmatic Management interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below this, a secondary menu shows 'Meter Management', 'Metering Structure', 'User Management', 'Tariffs and units', 'Consumer Groups', and 'Data sharing' (also highlighted with a red box). The main content area is titled 'Data sharing' and features a toggle for 'Modbus TCP' (disabled) and 'Rest API' (enabled, highlighted with a red box). A toggle for 'Allow API token authentication' is also present and is turned on. Below this, there is a table with columns for 'NAME', 'TOKEN', and 'CREATED ON', which currently shows 'No items to show'. An 'Actions' dropdown menu is located to the right of the table.

Commissioning

Main menu “System”

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

System

Basic settings are made in the System menu

- General
- Date and time
- Network settings
- Update
- SMTP configuration
- SSL certificate
- SSH access
- Erase data
- System log
- System diagnostics

Note:

Access only with “administrator” authorization

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

General

Device Name

- For assigning a device name
- The device name is displayed in the ABB i-bus® Tool
- QA/S 1.16.1 KNX: The device name is assigned in the ETS

Currency

- For setting the currency for cost calculation or display

The screenshot displays the ABB EQmatic web interface. The top navigation bar includes the ABB logo, 'EQmatic', and several menu items: 'Dashboard', 'Analytics', 'Management', and 'System'. The 'System' menu is highlighted with a red box. Below the navigation bar, a secondary menu lists various system settings: 'General', 'Date and Time', 'Network', 'Update', 'SMTP Configuration', 'SSL Certificate', 'SSH Access', 'Erase data', 'System Log', and 'System diagnostics'. The 'General' menu item is also highlighted with a red box. The main content area shows the 'General settings' configuration page. It features two input fields: 'Device name' with the value 'QA-S 3.16.1' and 'Currency' with a dropdown menu set to 'Euro (EUR)'. A blue 'Save' button is located at the bottom right of the configuration area.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

Date and Time

Automatic or manual date and time setting can be selected

Automatically Off:

- For manual setting of the time, date and time zone

Automatically On:

- The address/URL of the time server (e.g. pool.ntp.org) must be entered in the “Time synchronization server (NTP)” field
- The “Change the server” option must be used to change the server

QA/S 1.16.1 KNX: Date and time can also be received via KNX (3 byte and 8 byte)

The screenshot shows the ABB EQmatic web interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management', and 'System' (highlighted with a red box). Below the navigation bar, a sub-menu is visible with 'Date and Time' (highlighted with a red box), 'Network', 'Update', 'SMTP Configuration', 'SSL Certificate', 'SSH Access', 'Erase data', 'System Log', and 'System diagnostics'. The main content area displays the 'Date and time' configuration page. It features a toggle for 'Automatic date and time' which is currently turned on. Below this, there are two fields: '* Timezone' with a dropdown menu set to 'Europe/Berlin (UTC+2:00)' and a link 'Detect timezone'; and '* Time synchronization server (NTP)' with a text input field containing 'pool.ntp.org' and a link 'Change the server'. A blue 'Save' button is located at the bottom right of the configuration area.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

Network

Automatic or manual addressing can be selected

Automatic network configuration On:

- The device’s network settings are assigned automatically by a DHCP server in the network or by a router with DHCP functionality
- If no automatic assignment of the network settings takes place via DHCP, then a standard network setting will be made in the Auto IP range: 169.254.1.0 – 169.254.254.255

Automatic network configuration Off:

- The device’s network settings must be entered manually

QA/S 1.16.1 KNX: All network configuration, except from proxy configuration, is only possible via ETS

The screenshot displays the ABB EQmatic web interface. The top navigation bar includes the ABB logo, the product name 'EQmatic', and several menu items: 'Dashboard', 'Analytics', 'Management', and 'System' (which is highlighted with a red box). The date and time '2018-09-04 13:45' are shown on the right. Below the navigation bar, a secondary menu contains 'General', 'Date and Time', 'Network' (highlighted with a red box), 'Update', 'SMTP Configuration', 'SSL Certificate', 'SSH Access', 'Erase data', 'System Log', and 'System diagnostics'. The main content area is titled 'System network settings' and features a toggle switch for 'Automatic network configuration' which is currently turned on. Below this, there are input fields for 'Proxy URL' (with a placeholder 'type proxy server address if any...'), 'IP Address' (192.168.0.111), '* Subnet' (24), '* Default Gateway' (192.168.0.1), and 'DNS Server' (192.168.0.1). A blue 'Save' button is located at the bottom right of the settings panel.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

Update

Various options are available for updating the device or the firmware to the latest version

- Manual update
- Automatic update

The data and configuration in the device are retained during an update

The current version and other device-specific information can be retrieved via the menu item “Device information” in the main menu

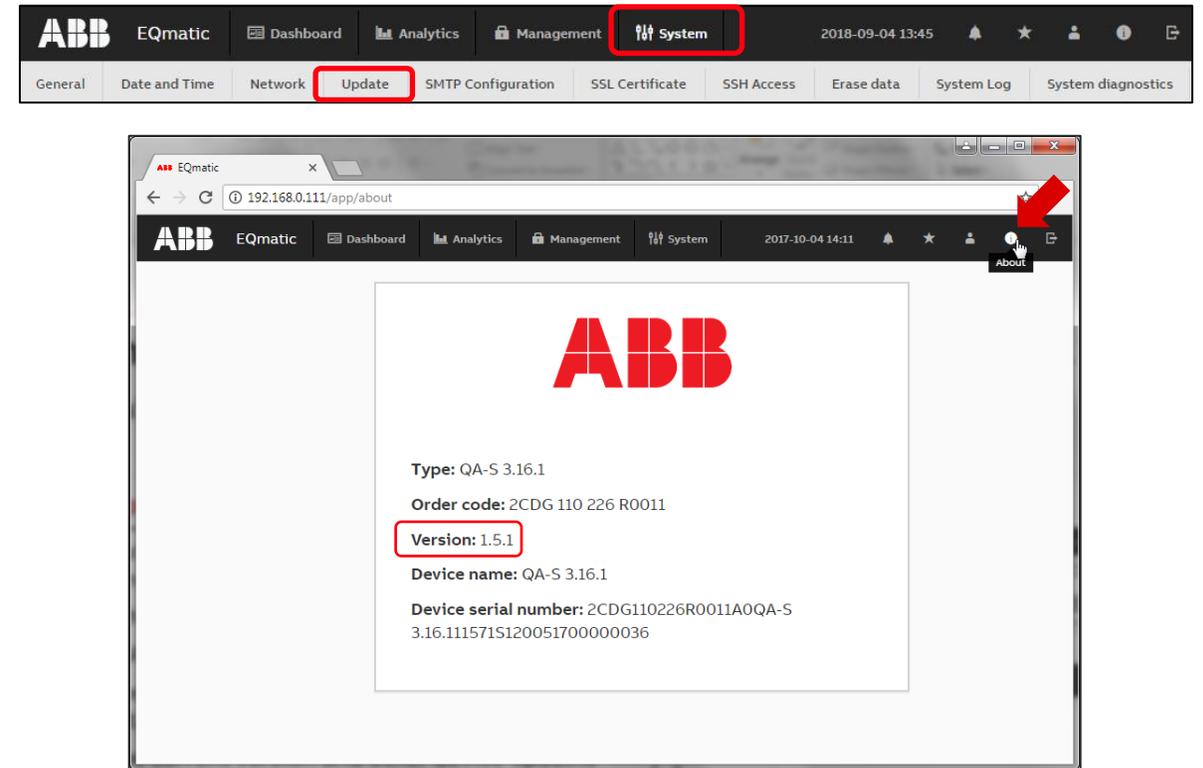

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

Update – Manual update

The update packages are available under the following download link

www.abb.com/knx

→ Products and Downloads

→ Energy Management

→ QA/S x.yy.1 Energy Analyzer

Save the latest firmware version to your PC/laptop

Click “Select update” and select the update file on the drive

Follow the instructions

The device will be rebooted after the update, and you will have to log in again

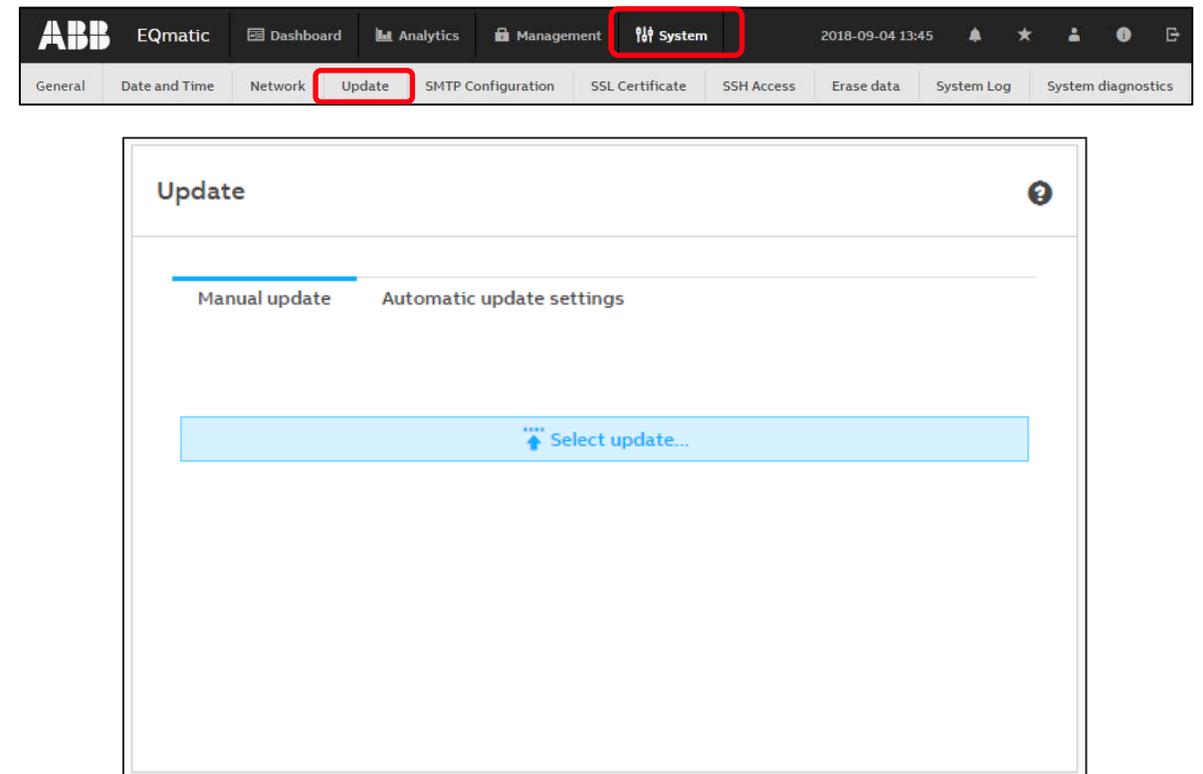

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

Update – Automatic update

The automatic update must be activated

The address/URL of the update server must be entered

The “Notifications” icon in the menu bar will inform you when a new update becomes available

Click on the notification and follow the instructions

The device will be rebooted after the update, and you will have to log in again

The screenshot displays the ABB EQmatic web interface. The top navigation bar includes the ABB logo, 'EQmatic', and several menu items: 'Dashboard', 'Analytics', 'Management', and 'System' (highlighted with a red box). Below this is a secondary menu with 'General', 'Date and Time', 'Network', 'Update' (highlighted with a red box), 'SMTP Configuration', 'SSL Certificate', 'SSH Access', 'Erase data', 'System Log', and 'System diagnostics'. A notification bar shows a timestamp '2017-08-17 16:19' and a notification icon with a blue dot, which is pointed to by a red arrow. The main content area is titled 'Update' and has two tabs: 'Manual update' and 'Automatic update settings' (selected). Under 'Automatic update settings', there is a toggle for 'Automatic updates enabled' which is currently turned on. Below that is a field for '* Updates server URL' containing the text 'http://www.knx-gebaeudesysteme.de/sto_g/MLC/MBUS'. At the bottom right of the settings area are 'Reset' and 'Save' buttons.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

SMTP Configuration

These settings configure the SMTP server

These settings are required so that the device can send messages, notifications (e.g. when the password is reset) and automatic reports via e-mail to users or recipients

You can configure the settings manually or by pre-selecting an e-mail service provider

Note: The required settings will be made available by the relevant provider

The screenshot displays the ABB EQmatic web interface. The top navigation bar includes the ABB logo, 'EQmatic', and menu items for 'Dashboard', 'Analytics', 'Management', and 'System' (highlighted with a red box). The date '2018-09-04 13:45' and user icons are visible on the right. Below this, a sub-navigation bar contains 'General', 'Date and Time', 'Network', 'Update', 'SMTP Configuration' (highlighted with a red box), 'SSL Certificate', 'SSH Access', 'Erase data', 'System Log', and 'System diagnostics'. The main content area shows the 'SMTP Configuration' form with a help icon. The form includes the following fields:

- E-mail provider: Select E-Mail provider (dropdown menu)
- * "From" E-mail: Text input field
- Login: Text input field
- Password: Text input field
- * SMTP server address: Text input field
- * Security: NONE (dropdown menu)
- * Port: Text input field

A blue 'Save' button is located at the bottom right of the form.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

Date and Time

Example: Gmail

- Email provider: Gmail (Google)
- “From” Email: xyz@gmail.com
(email of sender for all emails sent by QA/S)
- Password: *****

The screenshot shows the ABB EQmatic web interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management', and 'System' (highlighted with a red box). The sub-navigation bar includes 'General', 'Date and Time', 'Network', 'Update', 'SMTP Configuration' (highlighted with a red box), 'SSL Certificate', 'SSH Access', 'Erase data', 'System Log', and 'System diagnostics'. The main content area is titled 'SMTP Configuration' and contains the following fields:

- E-mail provider: Gmail (selected from a dropdown menu)
- * "From" E-mail: abb-qas@gmail.com
- * Password: *****

Buttons for 'Reset' and 'Save' are located at the bottom right of the form.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

SMTP Configuration

Depending on the provider special account settings must be made

Example: Gmail

- IMAP access: Enable
(access Gmail from other clients using IMAP)
→ Account setting → Forwarding &POP/IMAP
- Allow less secure apps: On
Some apps and devices use less secure login technologies. This will make your account more vulnerable. You can disable access to these apps (recommended) or enable access if you want to use the apps despite the risk.

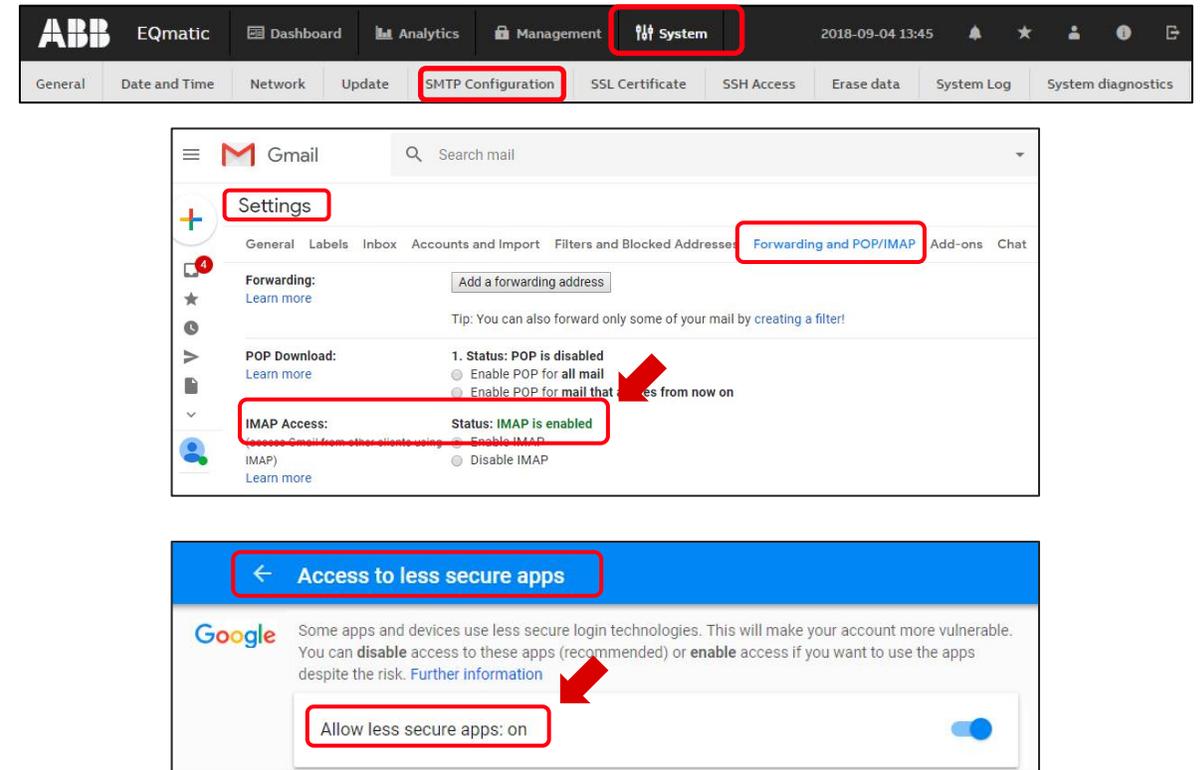

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu "System"

SSL Certificate

SSL stands for "secure sockets layer"

Using an SSL certificate will encrypt the data transmitted to the computer on opening a website, for example

SSL certificates can be used to encrypt data for web pages or e-mails, for example

The following options are available for handling SSL certificates:

- Upload certificate
- Generate certificate
<https://ssl-trust.com/>
- Delete certificate

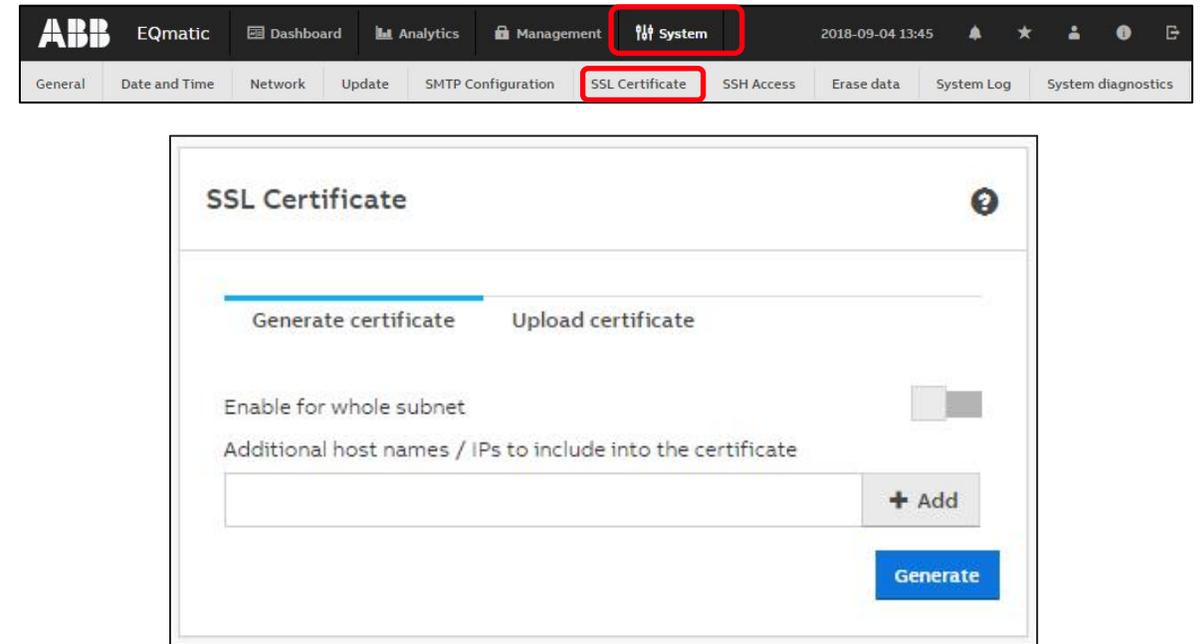

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

SSH Access

A secure network connection to the web server can be established using SSH (Secure Shell)

This access can then be used for servicing and maintenance purposes by the manufacturer

Authorization with time limit

- Access can be restricted to a certain number of hours with this parameter
- Duration for 1 ... 168 hour

Grant permission with no time constraint

- When this function is activated via the slide control, SSH access is permanently available

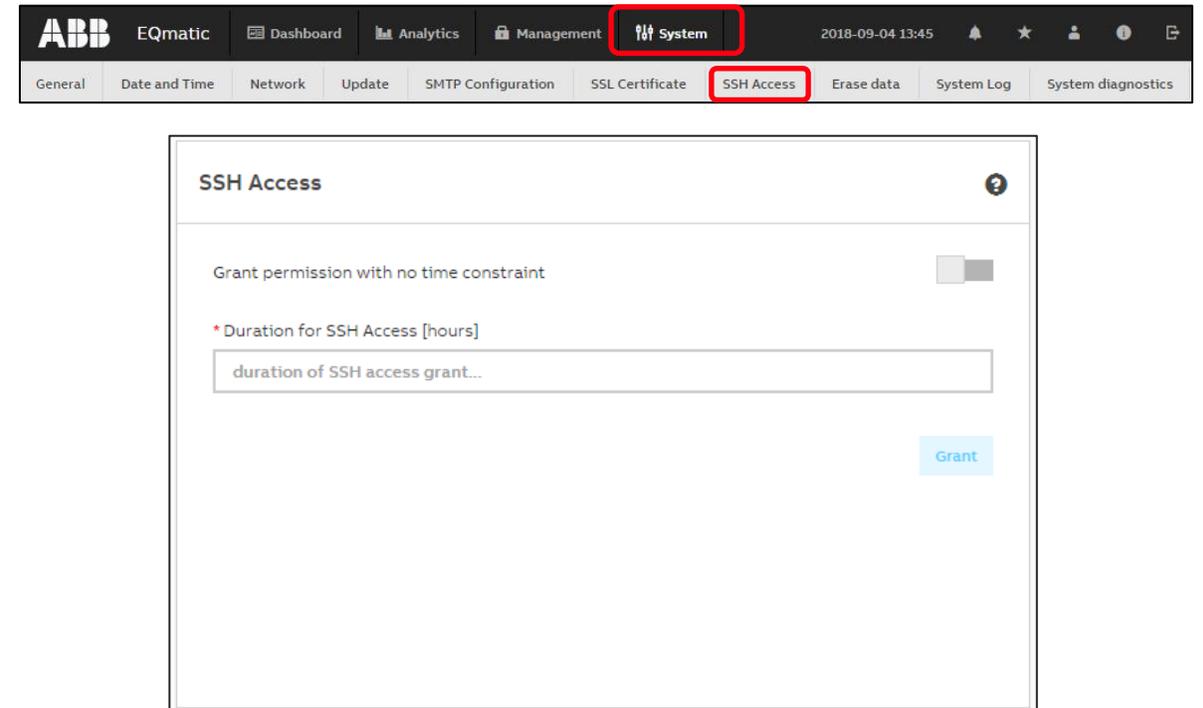

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

Erase data

This function allows you to delete all saved data and user-specific information from the system

This resets the system to its supplied state

The most recently installed system update is retained

The following data are reset to the factory settings or deleted:

- Devices and meters
- All meter data saved
- Meter configurations and metering structure configured
- Users and associated information (users and passwords are reset to the factory settings)
- All system settings
- SSL certificates (if any)
- QA/S 1.16.1 KNX: ETS parameter setting, group addresses and individual physical address

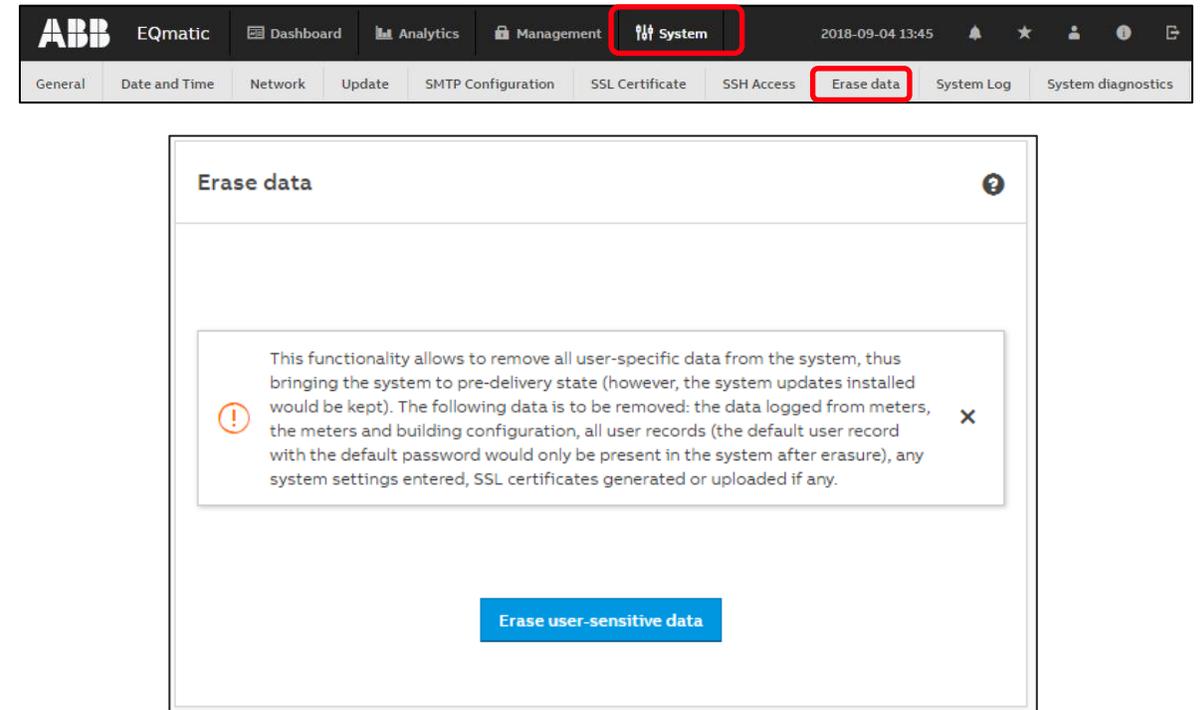

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

System Log

This function logs and timestamps all relevant information about the system and connected devices:

- IP network settings
- Date/time (Manual | Automatic)
- Reset to factory settings
- Device restart
- Firmware update
- Meter/device has been assigned to a new node
- Node has been deleted/added from/to metering structure
- User added/deleted
- User logged in/logged out

The System Log can also be restricted to a period using the calendar settings and exported as a file (e.g. xlsx).

The screenshot shows the ABB EQmatic web interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management', and 'System' (highlighted in red). Below this is a secondary menu with 'General', 'Date and Time', 'Network', 'Update', 'SMTP Configuration', 'SSL Certificate', 'SSH Access', 'Erase data', 'System Log' (highlighted in red), and 'System diagnostics'. The main content area is titled 'System Log' and features an 'Export' button. Below the title are 'From date' and 'To date' input fields with calendar icons, and a 'Filter' button. The log entries are as follows:

TIMESTAMP	ACTION
16/01/2020 12:40:23	The user admin (role Admin) logged in.
16/01/2020 08:25:15	The system was restarted.
15/01/2020 11:31:23	The system was restarted.
14/01/2020 15:48:31	The user admin (role Admin) logged in.
14/01/2020 14:44:42	The system was restarted.
14/01/2020 14:43:33	The system date/time settings were changed to manual with timezone Africa/Abidjan by .
14/01/2020 14:43:24	The user admin (role Admin) logged in.
14/01/2020 13:41:02	The system date/time settings were changed to manual with timezone Europe/Berlin by .
14/01/2020 11:55:57	The user admin (role Admin) logged in.
14/01/2020 11:08:41	The system was restarted.

A 'Load more...' button is located at the bottom of the log entries.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System”

System diagnostics

The System diagnostics function provides information on the device performance and the actual device status and is used for general diagnostics

The following information is available:

- Memory
- Database storage
- CPU utilization

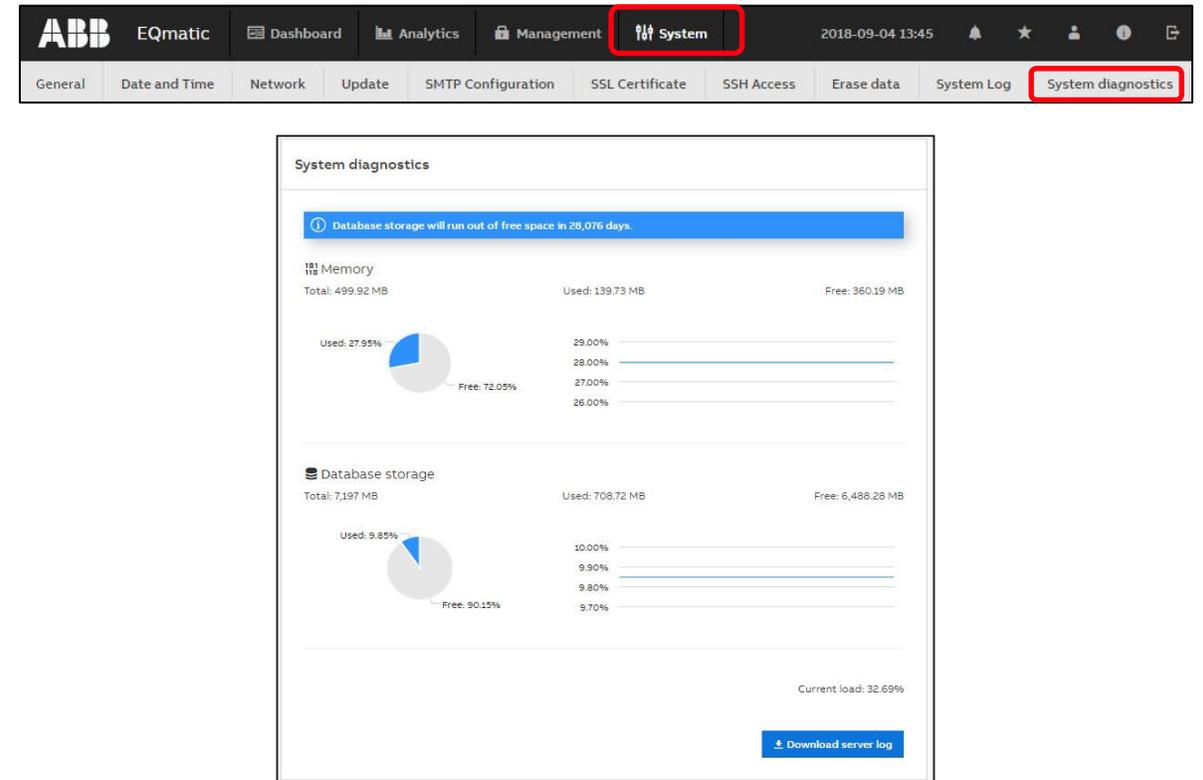

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System

Troubleshooting: Device access

The Energy Analyzer QA/S x.yy.1 user interface cannot be accessed:

- Check the connections, cables and network connection, etc.
- Start the i-bus® Tool and scan the network for IP devices. Select the device in question and click “Open Website.” The Login page opens. Enter the access data.
- If the device is not listed in the i-bus® Tool after a network scan
 - Check the PC’s/laptop’s network settings; switch off the firewall if necessary
 - Restart and reset the network settings (see manual). A new IP address may be assigned via DHCP. Start the i-bus® Tool and scan the network.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System

Troubleshooting: M-Bus

No or several M-Bus devices do not respond:

- Short circuit on the M-Bus?
- Line not connected correctly or line severed?
- Energy Analyzer ready for operation, supply voltage available?
- The voltage at the M-Bus terminals is at least 24 V?
- Identical baud rates (300; 2,400; 9,600) set on the Energy Analyzer and the bus device(s)?

One M-Bus device does not respond:

- Bus address not assigned
- Bus address incorrect
- M-Bus device not connected
- M-Bus line severed
- Check M-Bus address of the device

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “System

Troubleshooting: Modbus (RS485)

To minimize potential sources of faults, a few basic aspects should be taken into account on the usage of RS485

Determine the communication characteristics of a device before the system design is completed

Pay attention to the following points here:

- Two-wire or four-wire system
 - RS485 systems can be either two-wire or four-wire systems
 - The two-wire configuration - with the additional earth wire - reduces the wiring costs, however it is limited to half duplex communication (cannot receive and transmit at the same time)
 - The majority of RS485 devices have two-wire configurations.
- How high is the response time of the device (processing time)?
- What is the address range of the device that can be programmed?
- Which speed is supported?

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 1

During commissioning ...

- A** ... the meters can be manually inserted from a catalog and configured offline. Addressing is performed later.
- B** ... the meters must be in operation, connected to the M-Bus/Modbus/KNX of the QA/S and configured (e.g. baud rate, primary address).
- C** ... the meters must not be recording any measured values. Switch off the circuit or shut off the water supply, for example.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 1

During commissioning ...

- A** ... the meters can be manually inserted from a catalog and configured offline. Addressing is performed later.
- B** ... the meters must be in operation, connected to the M-Bus/Modbus/KNX of the QA/S and configured (e.g. baud rate, primary address).
- C** ... the meters must not be recording any measured values. Switch off the circuit or shut off the water supply, for example.

The meters must be ready for operation and configured

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 2

The commissioning wizard can be used to ...

- A** ... perform all necessary steps and basic settings in the Energy Analyzer QA/S during initial commissioning.
- B** ... configure the connected M-Bus/Modbus/KNX devices (meters) (e.g. baud rate, primary address,...).
- C** ... search for known IP devices in the local network and thereby read the network address of the Energy Analyzer QA/S.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 2

The commissioning wizard can be used to ...

- A** ... perform all necessary steps and basic settings in the Energy Analyzer QA/S during initial commissioning.
- B** ... configure the connected M-Bus/Modbus/KNX devices (meters) (e.g. baud rate, primary address,...).
- C** ... search for known IP devices in the local network and thereby read the network address of the Energy Analyzer QA/S.

Perform all necessary steps and basic settings during initial commissioning

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 3

The metering structure ...

- A** ... is only optional. The M-Bus/Modbus/KNX devices can be managed in the topology view as well.
- B** ... must be created separately for each medium (electricity, gas, ...).
- C** ... is used for simple navigation and analysis. The physical meters are assigned to a logical metering structure.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Which answer is correct?

Question 3

The metering structure ...

- A** ... is only optional. The M-Bus/Modbus/KNX devices can be managed in the topology view as well.
- B** ... must be created separately for each medium (electricity, gas, ...).
- C** ... is used for simple navigation and analysis. The physical meters are assigned to a logical metering structure.

Navigation, analysis and assignment of the meters

Commissioning

Main menu “Dashboard”

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Dashboard”

Dashboard

The dashboard provides a rapid overview of costs and consumption figures in the building

Users can configure customized views using widgets

A widget is a configurable graphic display element

Widgets are configured in edit mode

Each user creates his or her own dashboard with up to 24 widgets

Note:

Data for evaluation and analysis are not yet available after commissioning. This means that the dashboard is empty at that point. Make sure that connected devices are configured and that at least one meter is assigned to the metering structure.

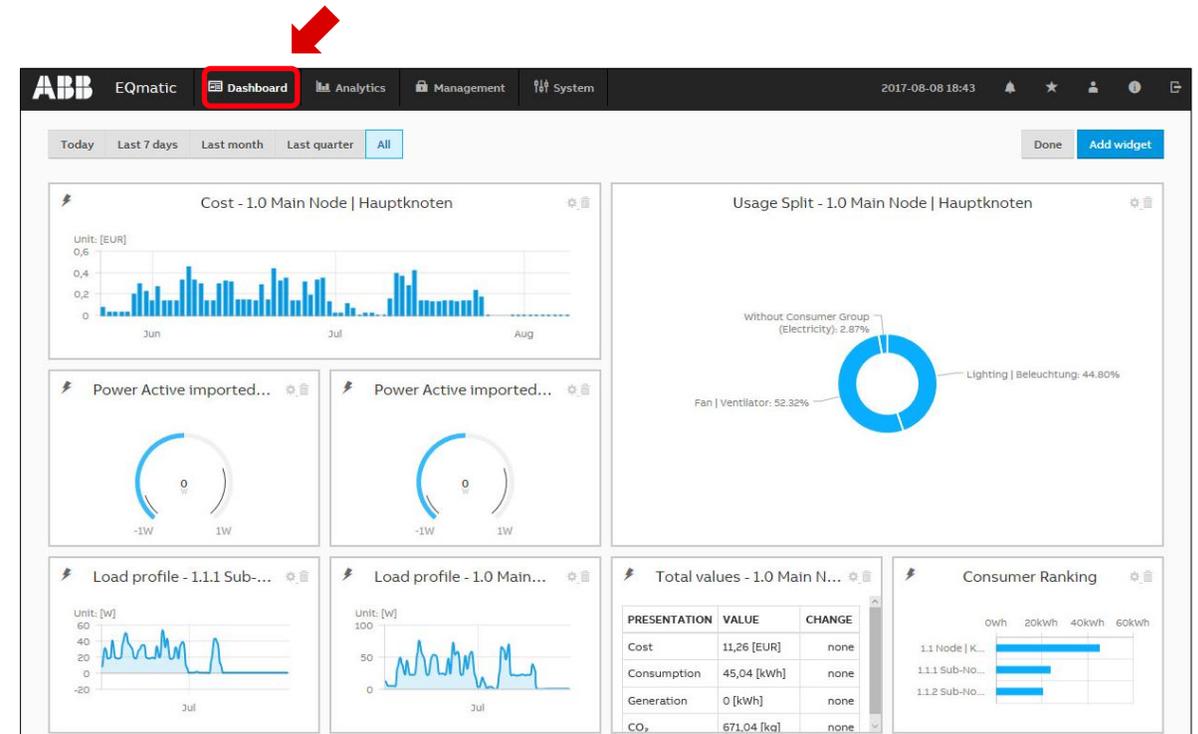

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Dashboard”

Widgets

1	Presets	Selects and displays current day, week, month, year, all. Presets are shown dynamically, depending on the measuring period.
2	Edit	Activates edit mode: <ul style="list-style-type: none">• Add widget• Place widget using drag & drop• Enlarge/reduce widget• Configure widget• Delete widget• Save
3	Add widget	Used to add and configure a widget. Only displayed in edit mode.

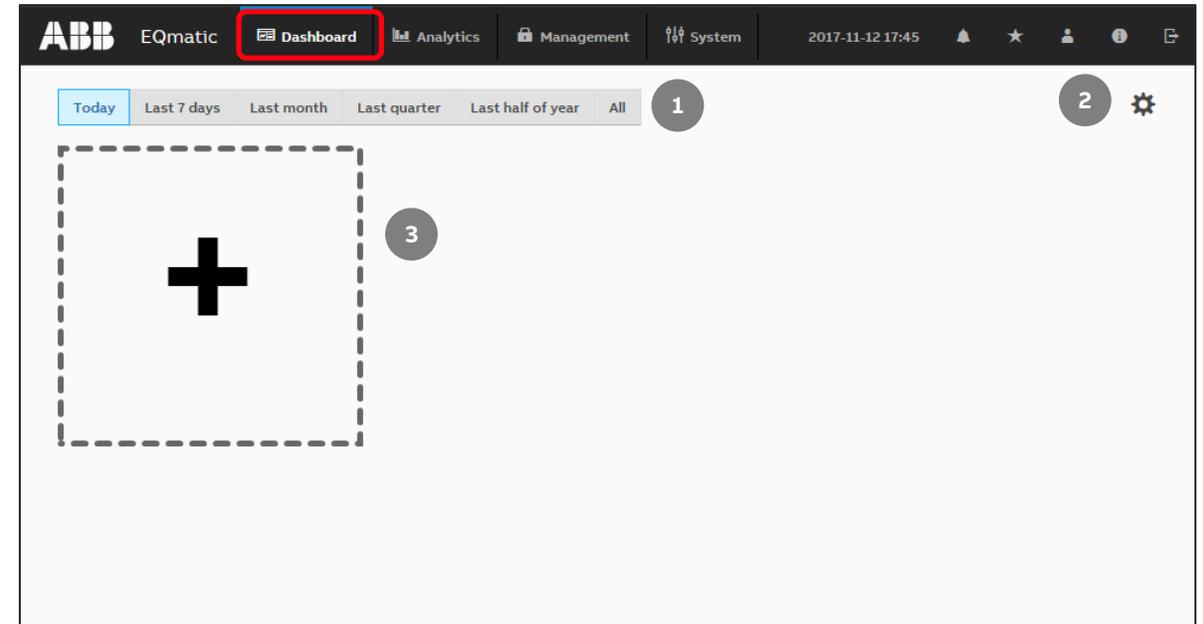

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu "Dashboard"

Widgets

Widgets are used to configure and lay out the dashboard.

The following widgets are available:

- Instantaneous Values **1**
- Usage Split **2**
- Historical Data **3**
- Consumer Ranking **4**
- Total values **5**
(performance indicators)

To add a widget to the dashboard, activate edit mode  and click the "Add widget" button

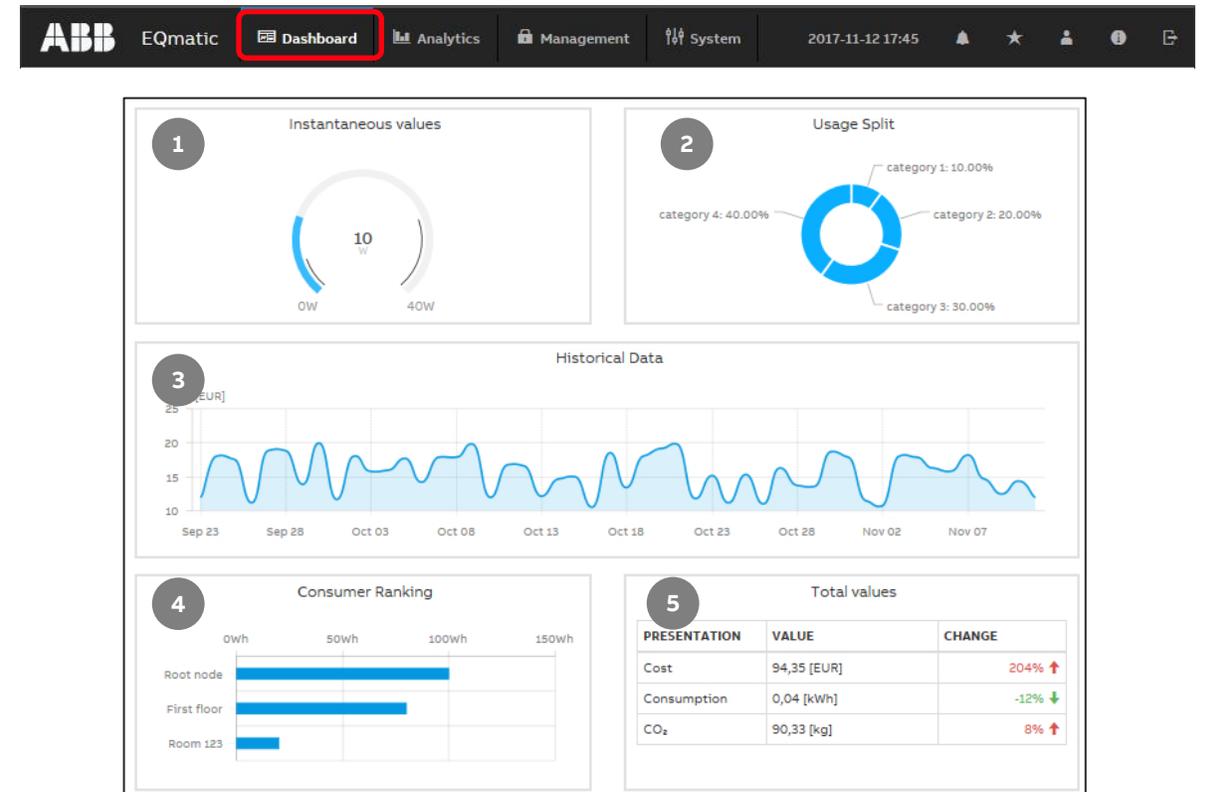

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Dashboard”

Widget – Instantaneous Values

Used to display measured values, e.g. power, current, voltage etc. in real time.

The following options are available to configure the widget:

- Building node (used to select the meter and/or building section depending on the metering structure configured)
- Medium (electricity, water, gas, ...)
- Value to display (selection of data points)
- Chart type (Serial Chart, Gauge, Single value)
- Custom name

The screenshot shows the ABB EQmatic dashboard interface. The top navigation bar includes the ABB logo, 'EQmatic', and menu items for 'Dashboard', 'Analytics', 'Management', and 'System'. The 'Dashboard' menu item is highlighted with a red box. The main content area displays a 'Configure - Instantaneous values' dialog box with the following settings:

- Building node: Light room 229
- Medium: Electricity
- Value to display: Active Imported Energy Total
- Chart type: Serial chart
- Custom name: Energy: Light in room 229

Below the configuration dialog, three widget views are shown:

- The first widget is a 'Serial chart' showing 'Active imported Energy Total' over time, with a y-axis from 260Wh to 280Wh and an x-axis from 08:45:00 to 08:48:00.
- The second widget is a 'Gauge' showing 'Energy: Light in room 229' with a value of 270 Wh, a scale from 0Wh to 1.08kWh, and a timestamp of 2018/09/05 08:49:08.
- The third widget is a 'Single value' showing 'Energy: Light in room 229' with a value of 270 Wh and a timestamp of 2018/09/05 08:49:08.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Dashboard”

Widget – Usage Split

Used to display the relative distribution of total cost, income or CO₂ emissions

The values are displayed according to the selected time interval (day, month, etc.) and available consumer groups

The following options are available to configure the widget:

- Building node (selection of the meter or building section depending on the metering structure configured)
- Value to display (costs, income, CO₂)
- Custom name

The screenshot shows the ABB EQmatic interface with the 'Dashboard' menu highlighted. The 'Configure - Usage Split' widget is shown in two states: configuration and visualization.

Configuration Panel:

- * Building node: Building
- * Value to display: Cost
- Custom name: Cost overview: Floor no. 03
- Buttons: Cancel, Save

Visualization Panel:

Usage Split - Main building
Cost overview: Floor no. 03

Consumer Group	Percentage
Without Consumer Group (Electricity)	70.13%
Air con	25.07%
Light	4.79%

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Dashboard”

Widget – Historical Data

Used to display historical total cost/ consumption data for a selected node or meter, by medium

The values are displayed according to the selected time interval (day, month, etc.).

The following options are available to configure the widget:

- Building node (selection of the meter or building section depending on the metering structure configured)
- Value to display (costs, consumption, generation, income, CO2, load profile)
- Medium (electricity, water, gas, ...)
- Chart type (line, column, smoothed line, step)
- Custom name

The screenshot shows the ABB EQmatic dashboard interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard' (highlighted with a red box), 'Analytics', 'Management', and 'System'. The date and time are 2017-11-12 17:45. The main content area displays the 'Configure - Historical Data' widget configuration form. The form includes the following fields:

- * Building node: Light room 229
- * Value to display: Load profile
- * Medium: Select...
- * Chart type: Line
- Custom name: Energy: Light in room 229

Buttons for 'Cancel' and 'Save' are visible at the bottom right of the configuration form. Below the configuration form is a line chart titled 'Cost - Offices Floor no. 04'. The chart shows a blue line representing cost over time, with the y-axis labeled 'Unit: [EUR]' ranging from 0 to 1.5. The x-axis shows time intervals from 03:00 to 21:00 on Nov 12. A 'Zoom out' button is located in the top right corner of the chart area.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Dashboard”

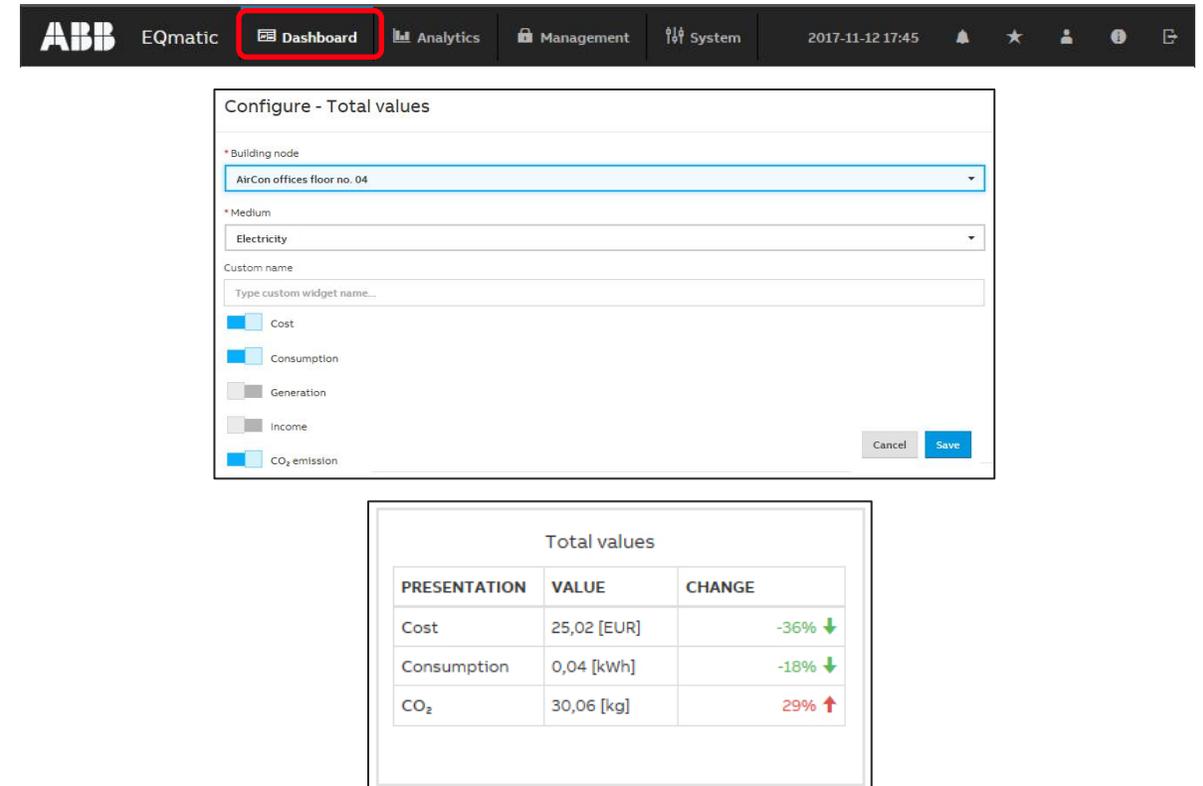

Widget – Total Values

Used to display typical total values for a medium

The values and the relative changes between the current and the previous time interval are displayed

The following options are available to configure the widget:

- Building node (selection of the meter or building section depending on the metering structure configured)
- Medium (electricity, water, gas, ...)
- Value to display (cost, consumption, generation, income, CO2 emission)
- Custom name

The screenshot shows the ABB EQmatic Dashboard interface. The 'Dashboard' menu is highlighted in red. The configuration window for the 'Total values' widget is open, showing the following settings:

- Building node: AirCon offices floor no. 04
- Medium: Electricity
- Custom name: Type custom widget name...
- Cost:
- Consumption:
- Generation:
- Income:
- CO₂ emission:

Below the configuration window is a preview table titled 'Total values' showing the following data:

PRESENTATION	VALUE	CHANGE
Cost	25,02 [EUR]	-36% ↓
Consumption	0,04 [kWh]	-18% ↓
CO ₂	30,06 [kg]	29% ↑

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Dashboard”

Widget – Consumer Ranking

Used to display the highest consumers in an installation, by medium

A maximum of 5 consumers are displayed in the widget

The following options are available to configure the widget:

- Value to display (costs, consumption, generation, income, CO₂)
- Medium (electricity, water, gas, ...)
- Custom name

The screenshot shows the ABB EQmatic web interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard' (highlighted with a red box), 'Analytics', 'Management', and 'System'. The date and time are 2017-11-12 17:45. The main content area displays a 'Configure - Consumer Ranking' dialog box with the following fields:

- *Value to display: Consumption
- *Medium: Electricity
- Custom name: Type custom widget name...

Buttons for 'Cancel' and 'Save' are visible. Below the dialog box is a 'Consumer Ranking' widget showing a horizontal bar chart with the following data:

Consumer	Consumption (kWh)
Offices Floo...	~180
AirCon offic...	~20
Lighting off...	~10

ABB EQmatic Energy Analyzer QA/S x.yy.1

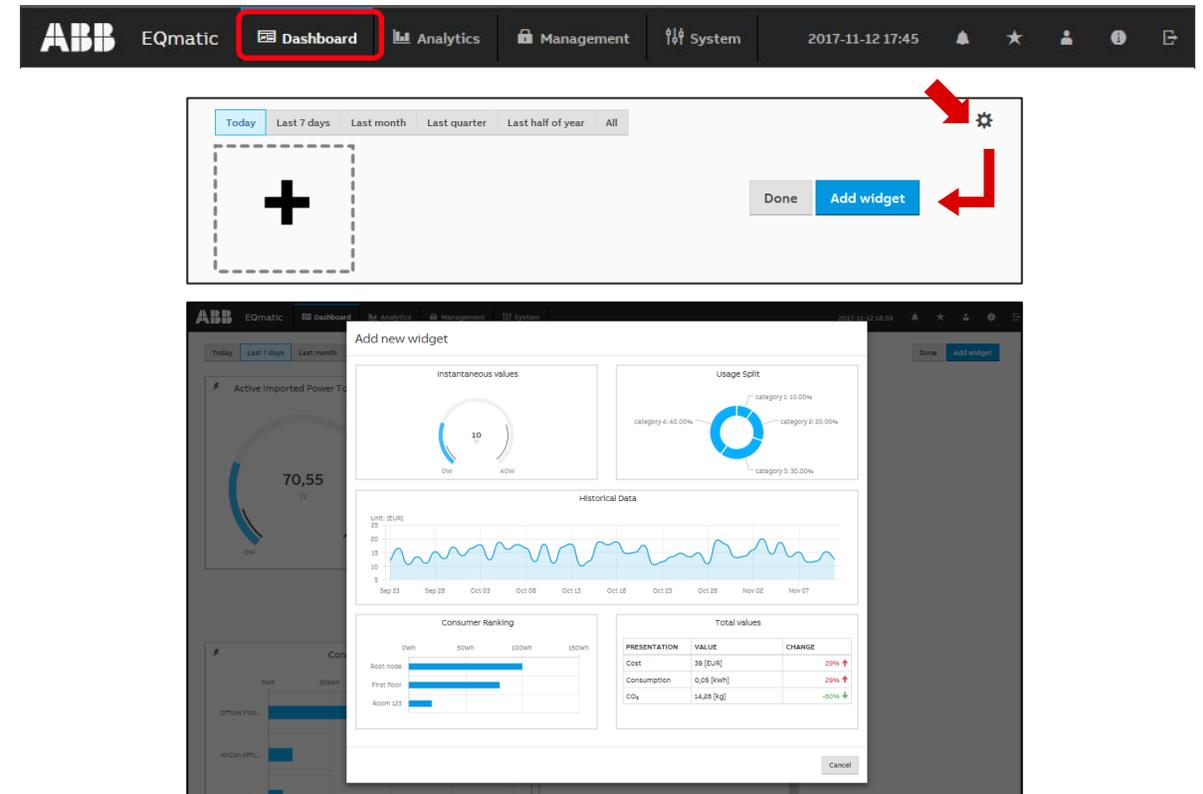

Menu “Dashboard”

Add a widget

To add a widget to the dashboard, activate the edit mode (click the  button) and click the “Add Widget” button

This opens a dialog window containing available widgets

- Instantaneous Values
- Usage Split
- Historical Data
- Total Values
- Consumer Ranking

The screenshot shows the ABB EQmatic dashboard interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard' (highlighted with a red box), 'Analytics', 'Management', and 'System'. The date and time '2017-11-12 17:45' are displayed on the right. The main dashboard area shows a 'Today' tab selected, with a large '+' icon in a dashed box and an 'Add widget' button. A red arrow points to the gear icon in the top right corner of the dashboard area. Another red arrow points to the 'Add widget' button. Below the dashboard, a dialog window titled 'Add new widget' is shown, displaying four widget options: 'Instantaneous values' (a gauge), 'Usage Split' (a donut chart), 'Historical Data' (a line chart), and 'Consumer Ranking' (a bar chart). A 'Total values' table is also visible in the dialog.

PRESENTATION	VALUE	CHANGE
Cost	39 [€ kWh]	23% ↑
Consumption	0,08 [MWh]	23% ↑
CO ₂	14,28 [kg]	-80% ↓

- Enlarge/reduce widget
- Configure widget (opens a configuration window)
- Delete widget

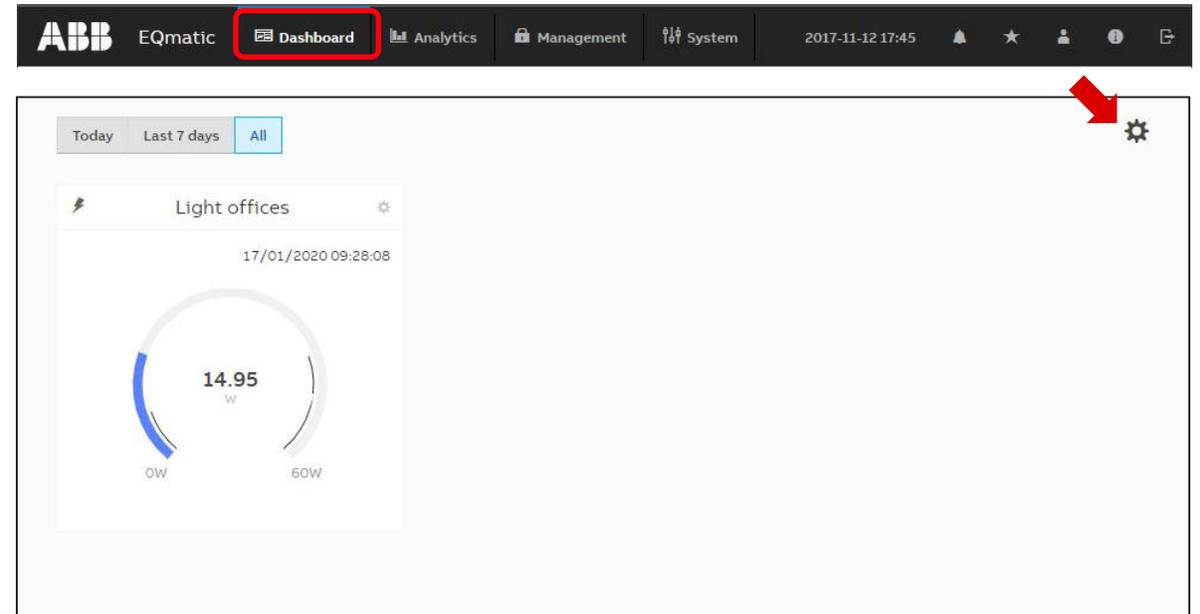

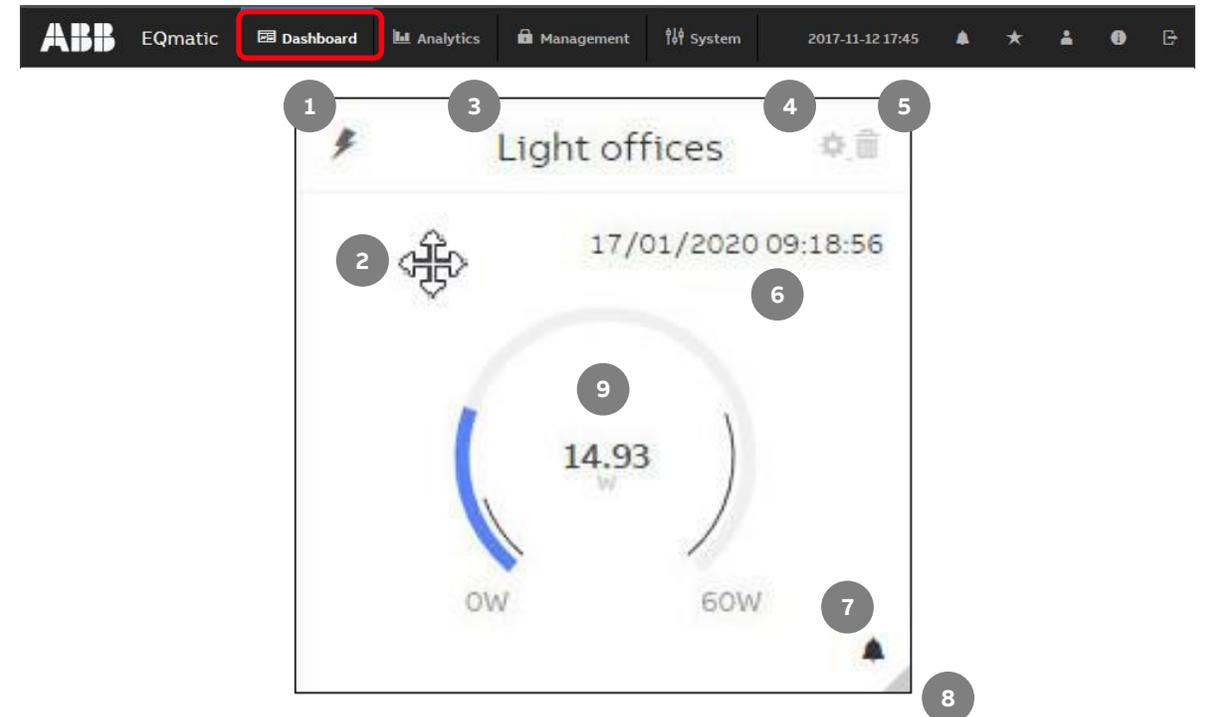

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Dashboard”

Configure a widget

1	Medium	This symbol indicates the selected medium in the widget.
2	Cross-hair 	Used to arrange the widget on the dashboard via drag & drop.
3	Widget Name	Using <i>Edit</i> , you can give the widget a unique name.
4	Edit	Opens a window where you can configure the widget.
5	Delete	Deletes widgets from the dashboard page.
6	Date/Time	Indicates the date and time when the widget was last updated. You can show/hide this with <i>Edit</i> .
7	Alarm	Indicates whether there is an alarm configured for the widget or measured value; this is only possible with widgets for instantaneous values. Clicking the icon opens the alarm configuration window. → More details in menu “Analytics” – “Alarms”
8	Customize 	Used to enlarge/reduce the widget via drag & drop.
9	Value display	How the measured value appears in the display depends on how the widget is configured (as a gauge chart, serial chart or value).

Commissioning

Main menu “Analytics”

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Analytics”

Analytics

The analysis functions are used for the detailed examination and representation of costs, consumption figures and other measured values

The following analyses can be performed:

- Historical Data
- Usage Split
- Instantaneous Values
- Benchmark - Period
- Benchmark - Consumer
- Reports
- Alarms

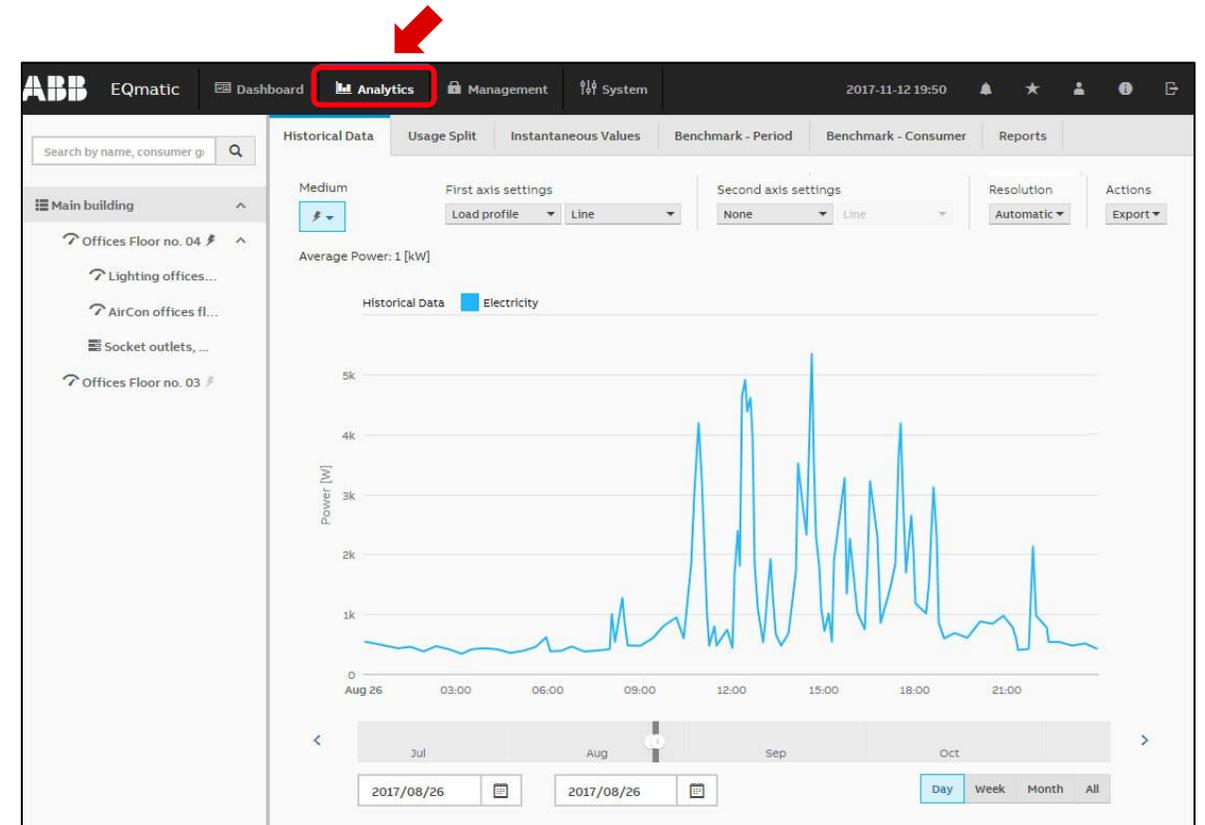

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Analytics”

Historical Data

For analysis and display of historical data

- Measured data for evaluation are not yet available to the system after commissioning. The device saves data every 5 minutes, so measured data will be available after 5 minutes at the earliest
- The display of historical data also depends on the magnitude of the connected load and the meter’s transmission behavior/resolution
- The following prerequisites must be met to display measured data
- Devices are configured and ready for operation
- Metering structure is configured
- At the maximum system capacity, historical data can be stored for at least 3 years

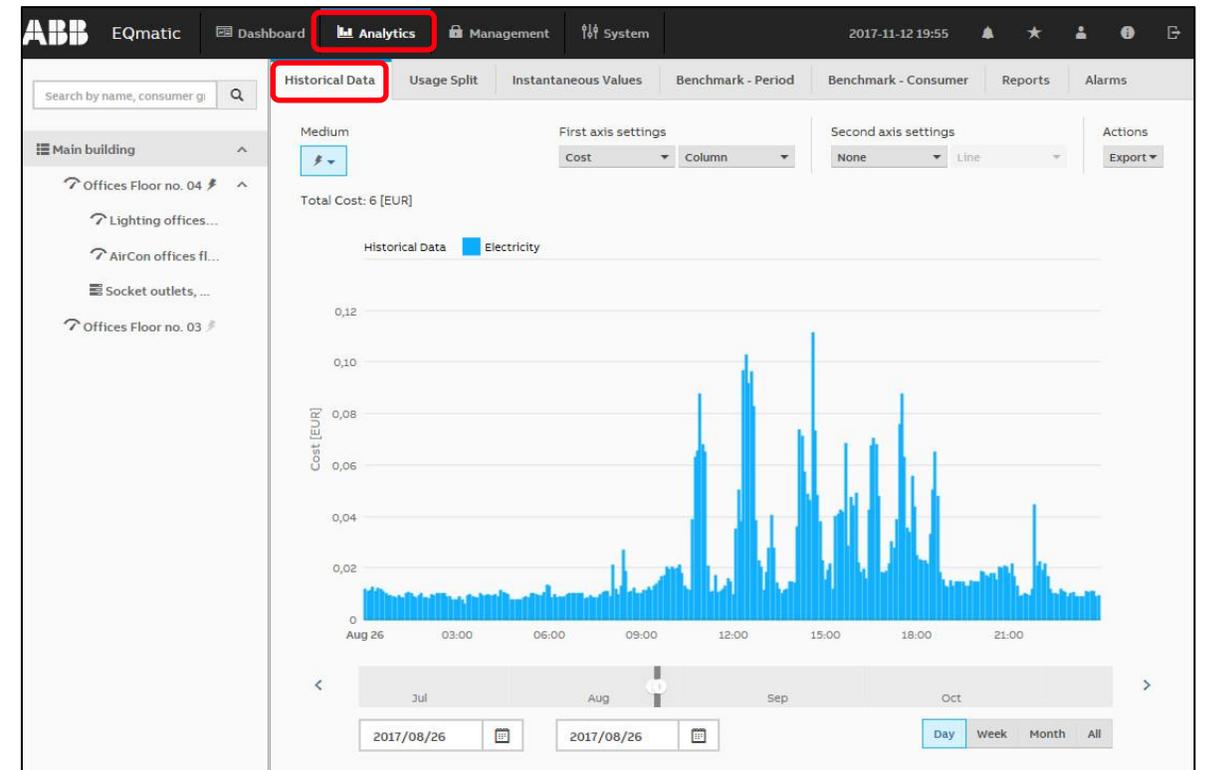

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Analytics”

Analytics

For analysis and display of historical data

9	Calendar function	Used to enter the required period (from/to).
10	Presets	Selects and displays current day, week, month, year, all. Presets are shown dynamically, depending on the measuring period: Day: always visible; Week: after 2 days; Month: after 7 days; Year: after 6 months; All: Always visible

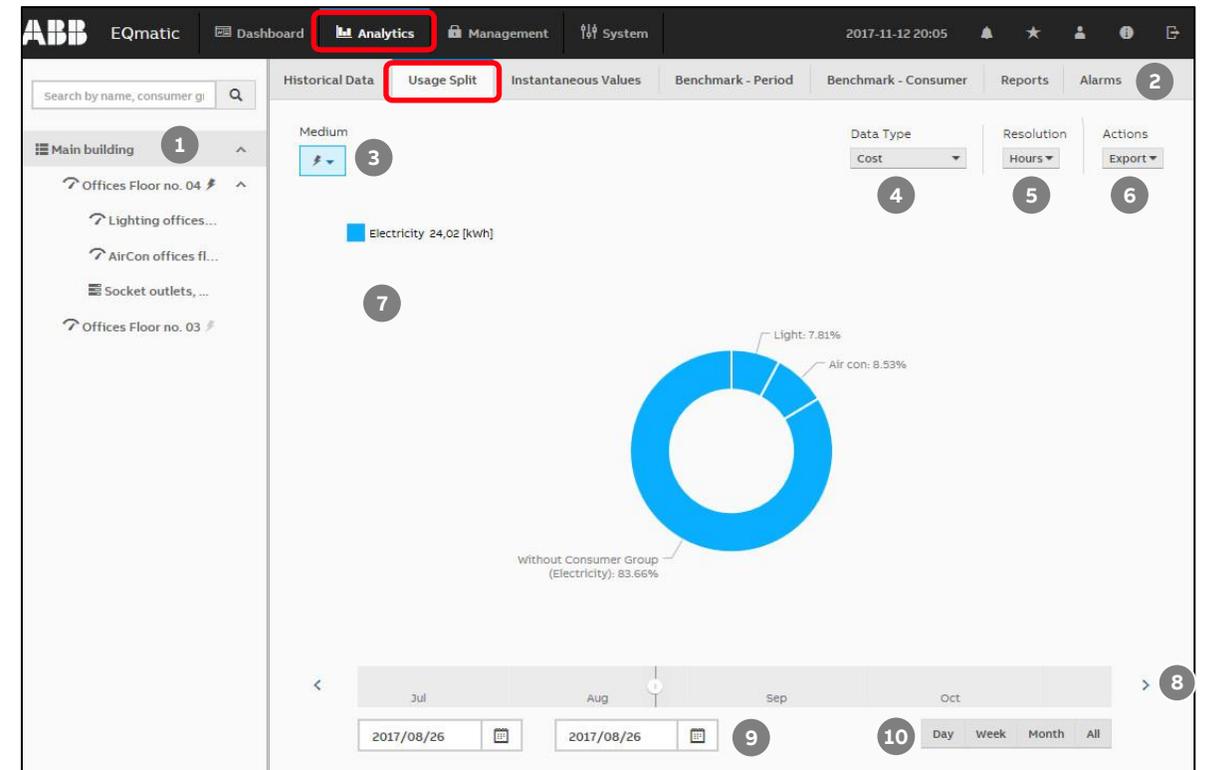

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Analytics”

Instantaneous Values

This function displays the instantaneous value for a single data point in real time

The value is displayed on a serial chart

You must first select the required metering point or meter in the metering structure

Depending on the meter's functionality, various data points are available for display

The values in the diagram are updated depending on:

- Baud rate of the devices
- Number of devices in the system
- Data resolution and transmission behavior of the M-Bus/Modbus/KNX meter
- The minimum update time is 5 seconds

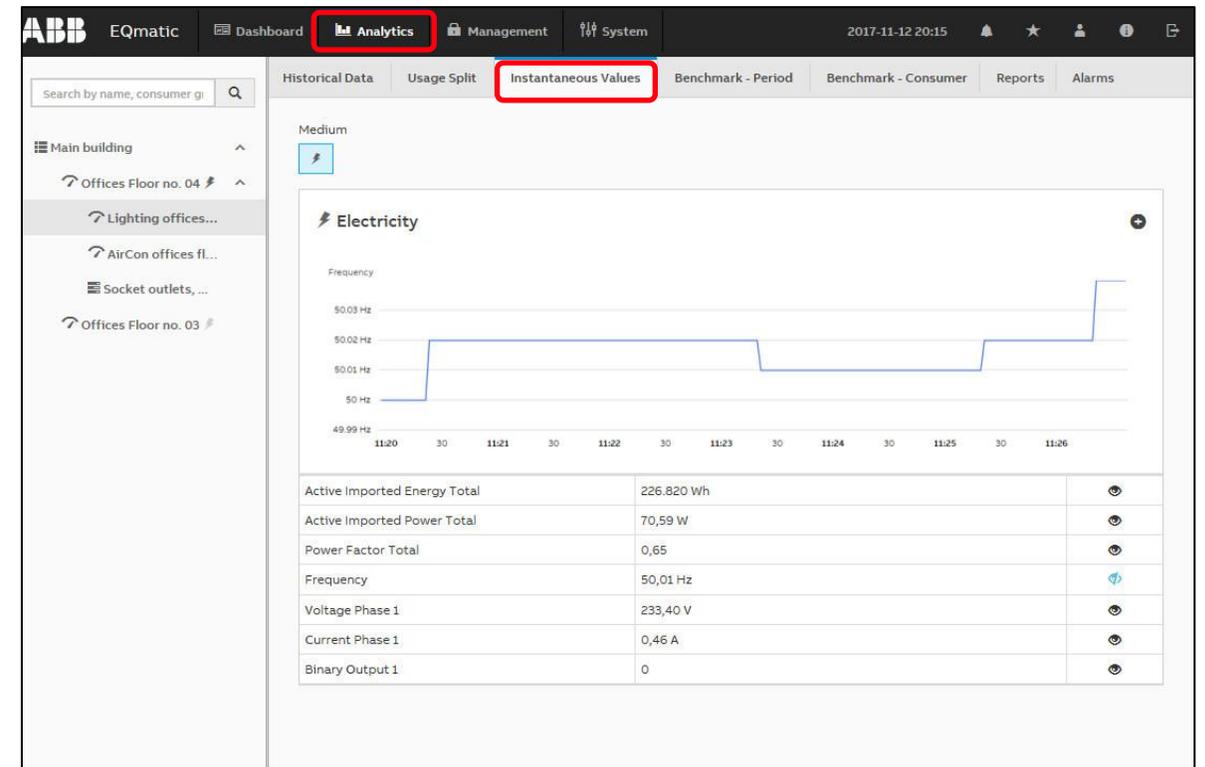

ABB EQmatic Energy Analyzer QA/S x.yy.1

Commissioning

Main menu “Load control”

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Load control” (only for QA/S 1.16.1 KNX)

Load control

With the Load Control Management function, load shedding sequences can be prioritized based on the electrical power values received from electricity meters

In order to be able to display and operate the load control via the user interface, it must first be activated in the ETS using the “Enable load control” parameter

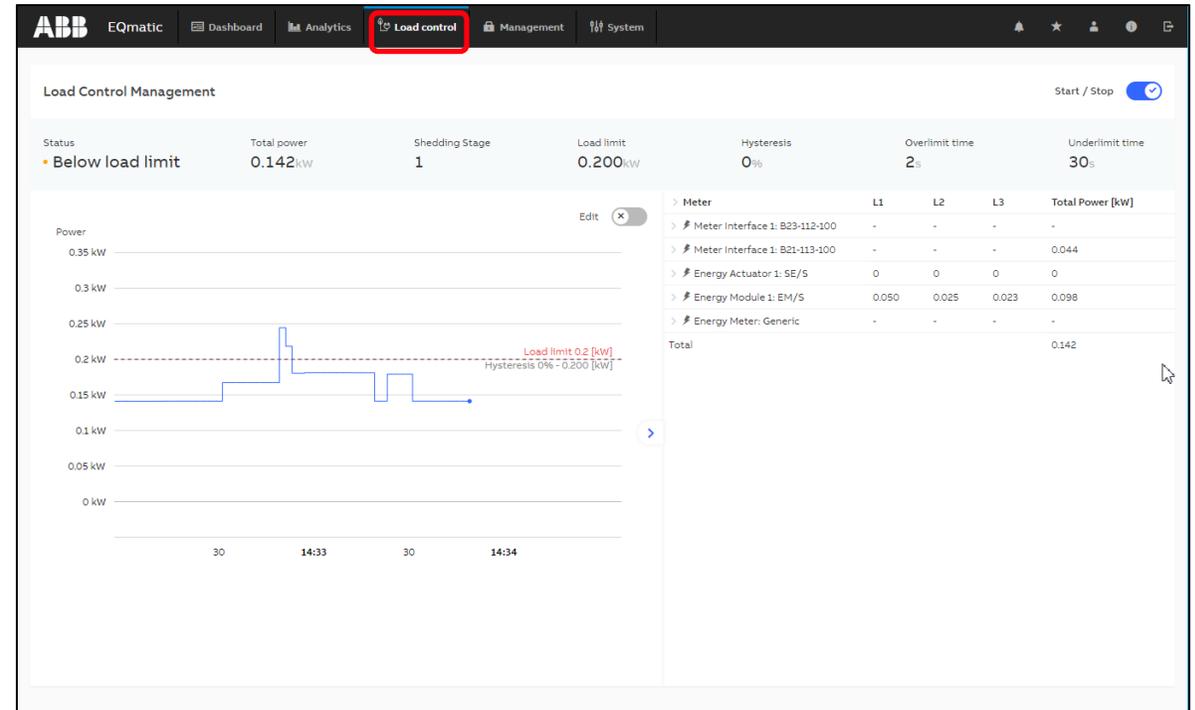

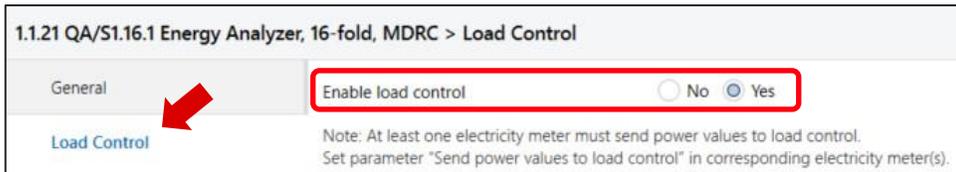

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Load control” (only for QA/S 1.16.1 KNX)

Load control

Load control is a function that enables an Energy Analyzer QA/S 1.16.1 KNX to manage an electrical installation energy-efficiently based on an adjustable load limit, by sending switching commands to KNX

The Energy Analyzer (master) ① receives power values from up to 16 energy meters ② ③ (slaves, e.g. SE/S, EM/S, ZS/S and third party)

The values are then internally added to the total power value

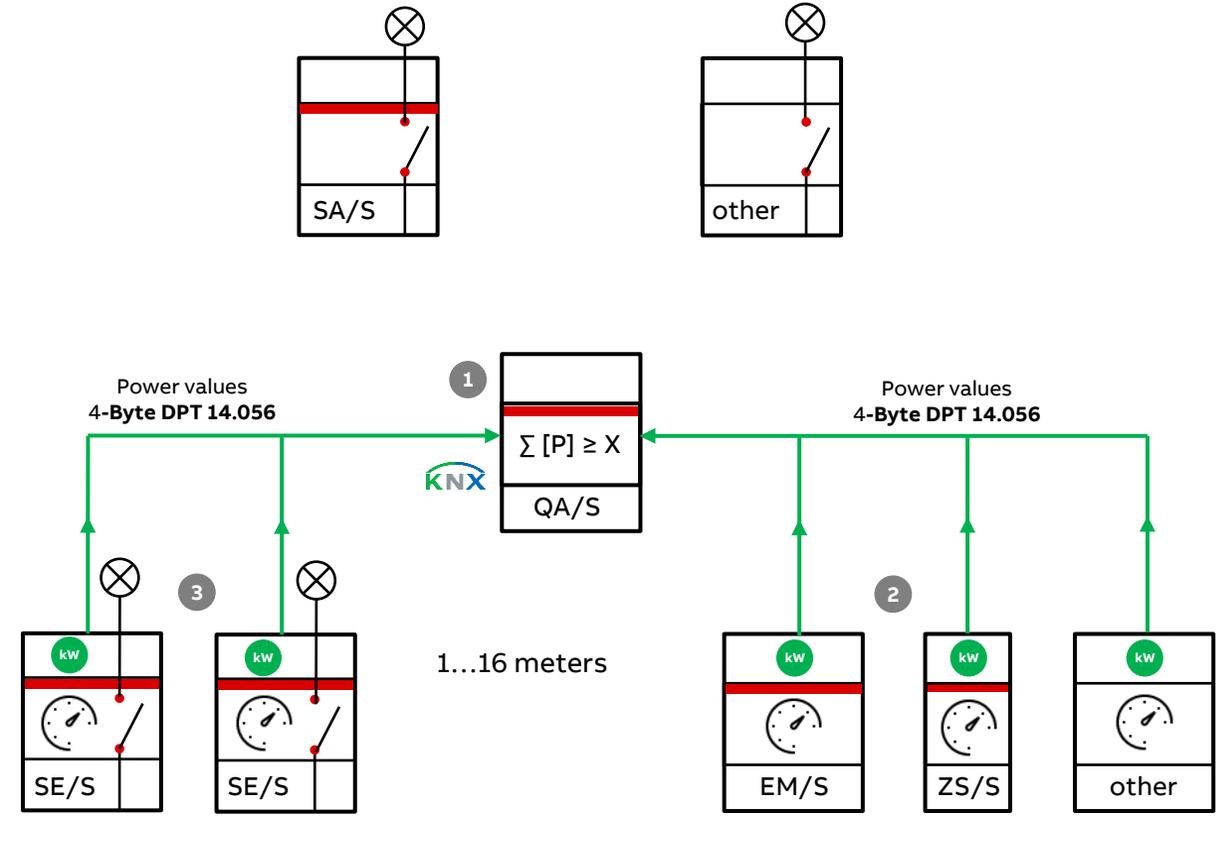

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Load control” (only for QA/S 1.16.1 KNX)

Load control

The Energy Actuator ③ features power measurement and a switch actuator function

As a result, it can send power values to the load control function and at the same time, receive shedding stages to switch connected consumers on and off

This means that a shedding stage can be set in the Energy Actuator for each output

The slave receives the shedding stage and switches all outputs set with this stage

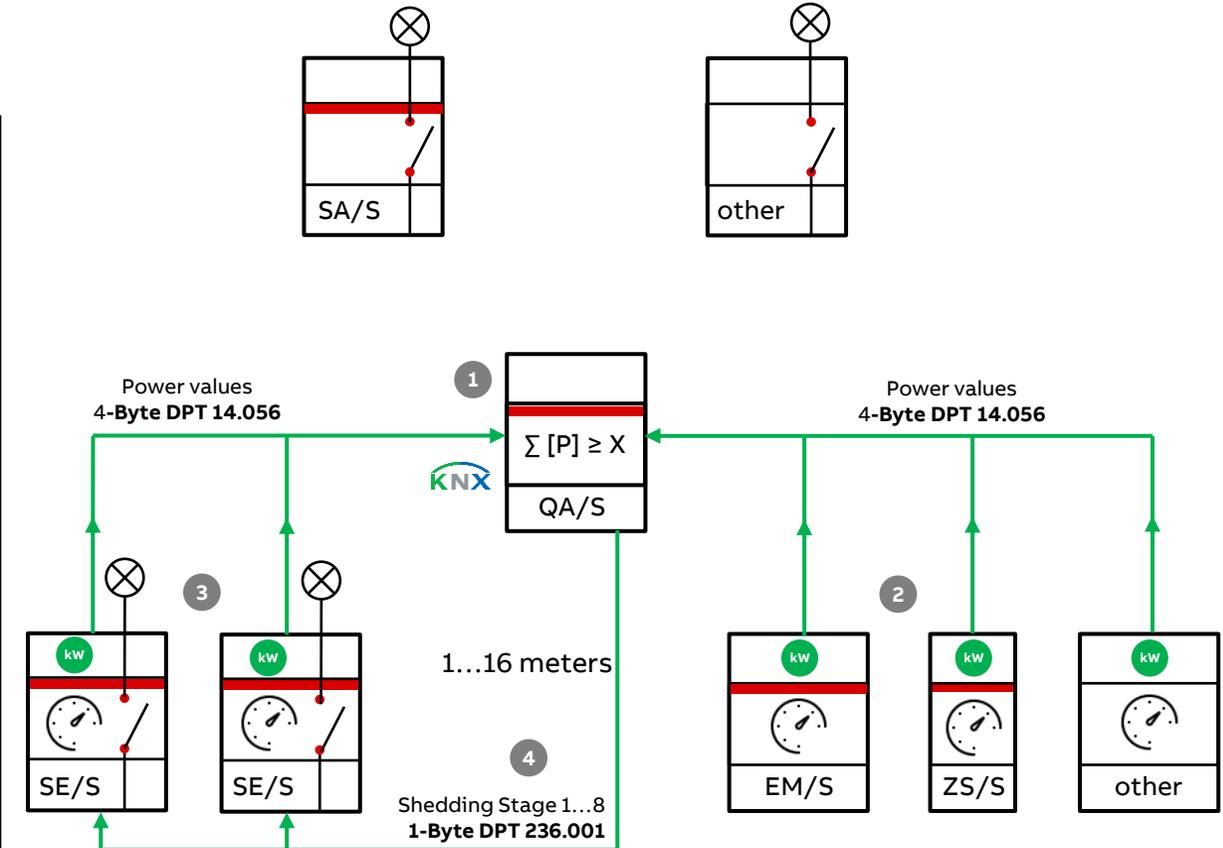

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Load control” (only for QA/S 1.16.1 KNX)

Load control

The Energy Actuator ③ features power measurement and a switch actuator function

As a result, it can send power values to the load control function and at the same time, receive shedding stages to switch connected consumers on and off

This means that a shedding stage can be set in the Energy Actuator for each output

The slave receives the shedding stage and switches all outputs set with this stage

Devices ⑥ (e.g. switch actuators) without the “*Receive shedding stages*” group object can still be integrated in load control using the 1-bit group objects “*Send load shedding stage 1...8*” ⑤

The master increases the shedding stage until “Send sum power values” falls back below the load limit

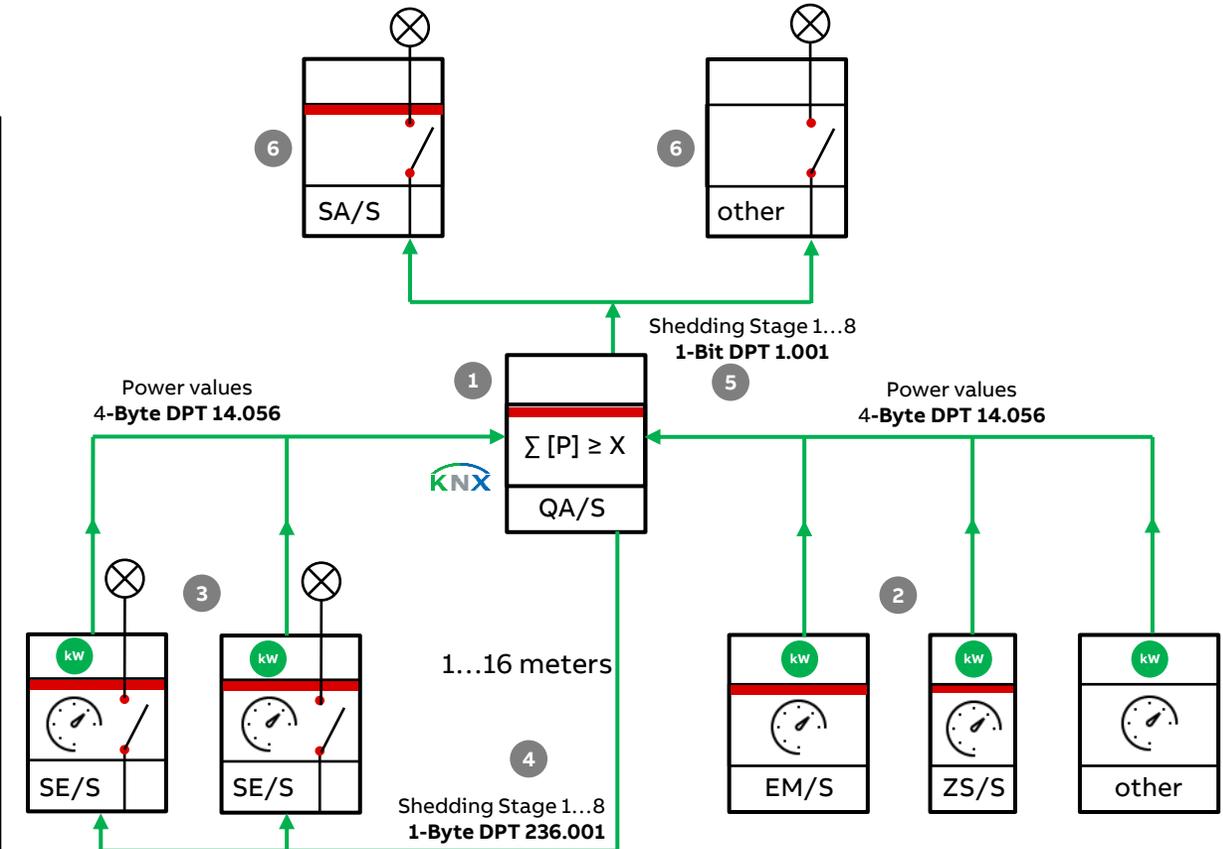

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Load control” (only for QA/S 1.16.1 KNX)

How load control works

The number of shedding stages that load control (the master) can send is defined based on the number of priority stages to be switched on the meters (slaves)

For instance, if a system has only two priority stages (where priority 1 is always on and priority 2 can be switched off as necessary), one load shedding stage is enough

In the master, you can set a load limit that must not be exceeded

Alternatively there is a load limit that can be changed via KNX

As a rule, the power values received from the slaves should be sent with a change

When the master then receives a new power value, the sum of the values is recalculated and if applicable, a shedding stage sent to KNX

The cyclic monitoring time can be enabled

The screenshot shows the configuration page for '1.1.21 QA/S1.16.1 Energy Analyzer, 16-fold, MDRC > Load Control'. The 'Load Control' tab is selected and highlighted with a red box. The configuration is organized into a table with columns for meter identification and specific settings.

Meter	Parameter	Value	Unit
General	Enable load control	<input checked="" type="radio"/> Yes	
	Note: At least one electricity meter must send power values to load control. Set parameter "Send power values to load control" in corresponding electricity meter(s).		
Meter 1	Number of load shedding stages	2	
Meter 2	Load limit	150	W
Meter 3	Change load limit via Group object	<input checked="" type="radio"/> Yes	
Meter 4	Reaction time when exceeding load limit	2	s
Meter 5	Reaction time when falling below load limit	30	s
Meter 6	Hysteresis at restart attempt in % of load limit	0	%
Meter 7	Change load limit, hysteresis and reaction times via user interface	<input checked="" type="radio"/> Yes	
Meter 8	Overwrite load limit, hysteresis and reaction times with download	<input checked="" type="radio"/> Yes	
Meter 9	Value Group object "Deactivate load control" at restart	<input checked="" type="radio"/> 1 = load control deactivated	

ABB EQmatic Energy Analyzer QA/S x.yy.1

Menu “Load control” (only for QA/S 1.16.1 KNX)

How load control works

Set the over/underlimit reaction times according to how quickly you wish the system to react

If the load limit is exceeded, shedding stage 1 is sent to KNX after the overlimit reaction time

If the load then exceeds the limit again, the next shedding stage up is sent after the reaction time, and so on, until the load falls back below the limit

Once the reaction time has run after the load falls below the limit, the master reduces the shedding stage (attempted restart)

Take account of relay lifetime when setting reaction times

Set up the system so that load control is only active at peak times, or set long enough over/underlimit reaction times to prevent excessive switching

The screenshot shows the configuration page for '1.1.21 QA/S1.16.1 Energy Analyzer, 16-fold, MDRC > Load Control'. The 'Load Control' tab is selected and highlighted with a red box. The configuration is organized into a table with columns for 'Meter' and 'Parameter'. The 'General' section includes 'Enable load control' (set to Yes) and a note about power values. The 'Meter' section lists parameters for 9 meters, including 'Number of load shedding stages' (2), 'Load limit' (150 W), 'Change load limit via Group object' (Yes), and various reaction times (2s and 30s). The 'Hysteresis at restart attempt in % of load limit' is set to 0%. The 'Change load limit, hysteresis and reaction times via user interface' and 'Overwrite load limit, hysteresis and reaction times with download' options are both set to Yes. The 'Value Group object "Deactivate load control" at restart' is set to 1, which means load control is deactivated at restart.

Meter	Parameter	Value
General	Enable load control	<input type="radio"/> No <input checked="" type="radio"/> Yes
	Note: At least one electricity meter must send power values to load control. Set parameter "Send power values to load control" in corresponding electricity meter(s).	
+ Meter 1	Number of load shedding stages	2
+ Meter 2	Load limit	150 W
+ Meter 3	Change load limit via Group object	<input type="radio"/> No <input checked="" type="radio"/> Yes

ETS Parameter Energy Analyzer QA/S 1.16.1 KNX

Commissioning

To display and process the QA/S values of KNX meters, both the QA/S and the KNX meters must first be configured and parametrized in ETS

- Add the QA/S and KNX meters to the project
- Set the parameters of the QA/S and KNX meters, e.g.
 - Date and time source (KNX, User Interface or time server)
 - Meter settings: Meter Interface Module ZS/S, Energy Actuator SE/S, Energy Module EM/S, Electricity (generic), Gas (generic), Water (generic), Heat (generic)
 - Load control
- Assign group addresses
- Download individual address and application programs

Parameter window: SE/S Energy Act. – EM/S Energy Mod.

5

Monitor "In Operation" Group object

This parameter determines whether the In operation group object monitors the presence of the SE/S or EM/S on the bus.

- No: No monitoring
- Yes, value 0: Shows the In operation group object and the Cycle time parameter. The group object expects a value 0 telegram from the SE/S or EM/S within the cycle time.
- Yes, value 1: Shows the In operation group object and the Cycle time parameter. The group object expects a value 1 telegram from the SE/S or EM/S within the cycle time.
- Yes, both values: Shows the In operation group object and the Cycle time parameter. The group object expects a value 0 or 1 telegram from the SE/S or EM/S within the cycle time.

6

Send power values to load control

This parameter determines which power value from the connected meter is sent to load control and taken into account in the calculation.

- No: No power value is sent; the meter is not taken into account in the load control
- Total: Sends the total power/sum of all channels
- Channel A: Sends the channel A power value
- Channel B: Sends the channel B power value
- Channel C: Sends the channel C power value
- Channel A, B: Sends the (sum of the) channel A and B power values
- Channel A, C: Sends the (sum of the) channel A and C power values
- Channel B, C: Sends the (sum of the) channel B and C power values

ETS Parameter Energy Analyzer QA/S 1.16.1 KNX

Parameter window: Electricity (generic)

5

Communication monitoring

This parameter determines whether the In operation group object monitors the presence of the meter on the bus.

- No: No monitoring
- Yes, value 0: Shows the In operation group object and the Cycle time parameter. The group object expects a value 0 telegram from the meter within the cycle time.
- Yes, value 1: Shows the In operation group object and the Cycle time parameter. The group object expects a value 1 telegram from the meter within the cycle time.
- Yes, both values: Shows the In operation group object and the Cycle time parameter. The group object expects a value 0 or 1 telegram from the meter within the cycle time.
- General monitoring: If any telegram fails to reach an Energy Analyzer group object within the set cycle time, the meter will be flagged as "disconnected" in the meter management overview.
- Therefore the meter's group object must be linked with the corresponding KNX Energy Analyzer group object.

6

Voltage network

This parameter determines whether the meter has a 2-, 3- or 4-wire connection and provides a corresponding tab. To use the tab, select the relevant option.

- 2-Wire (L, N): The meter is a 2-wire. The group objects for a 2-wire meter appear.
- 3-Wire (L1, L2, L3): The meter is a 3-wire. The group objects for a 3-wire meter appear.
- 4-Wire (L1, L2, L3, N): The meter is a 4-wire. The group objects for a 4-wire meter appear.

The screenshot shows the configuration window for '1.1.20 QA/S1.16.1 Energy Analyzer, 16-fold, MDRC > Meter 5 > Electricity'. The interface is divided into two main sections: a left sidebar with a tree view and a main configuration area on the right.

Left Sidebar (Tree View):

ETS Parameter Energy Analyzer QA/S 1.16.1 KNX

Measurement

The Energy Analyzer lets you capture up to ten different measured values and/or environmental parameters per configured sensor and display them on the UI (dashboard or instantaneous values)

When combined with the alarm function, it can send an email notification whenever a threshold is exceeded

- Temperature (°C/°F)
- Rel. Humidity % (1-byte/2-bytes-value)
- CO₂/Air Quality ppm
- PM2.5: particulate matter
- PM10: particulate matter
- Wind Speed m/s
- Brightness lux

The screenshot shows the configuration interface for a 16-fold MDRC Energy Analyzer. The title bar reads "1.1.20 QA/S1.16.1 Energy Analyzer, 16-fold, MDRC > Meter 9 > Sensor". The interface is divided into two main sections: a left-hand navigation pane and a right-hand configuration area.

Left-hand navigation pane: Lists various meters and their associated sensors. "Meter 9" is selected and highlighted with a red box. Below it, "Sensor" is also highlighted with a red box. Other meters listed include Meter 2, Meter 3, Meter 4, Meter 5, Meter 6, and Gas. A "5" is circled next to "Communication monitoring" and a "6" is circled next to "Value 1".

Right-hand configuration area: Contains the following fields and options:

- General:** Device selection (Measurement), Name (Sensor: Measurement), Location (Training Board (9)), Serial number (empty).
- Load Control:** Enable Group object "Request meter/sensor reading" (No, Yes). The "Yes" radio button is selected.
- Note:** Connected device must support this function.
- Communication monitoring:** No.
- Value 1:** 9.001 (F16) Temperature (°C)
- Value 2:** 5.001 (U8) Rel. Humidity
- Value 3:** 9.005 (F16) Wind Speed
- Value 4:** Not used
- Value 5:** Not used
- Value 6:** Not used
- Value 7:** Not used
- Value 8:** Not used
- Value 9:** Not used
- Value 10:** Not used

Provide measured values

Data sharing via Modbus TCP and REST API

ABB EQmatic Energy Analyzer QA/S x.yy.1

Provide measured values

Data sharing via Modbus TCP & REST API – QA/S as a Gateway between field devices and super ordinate system

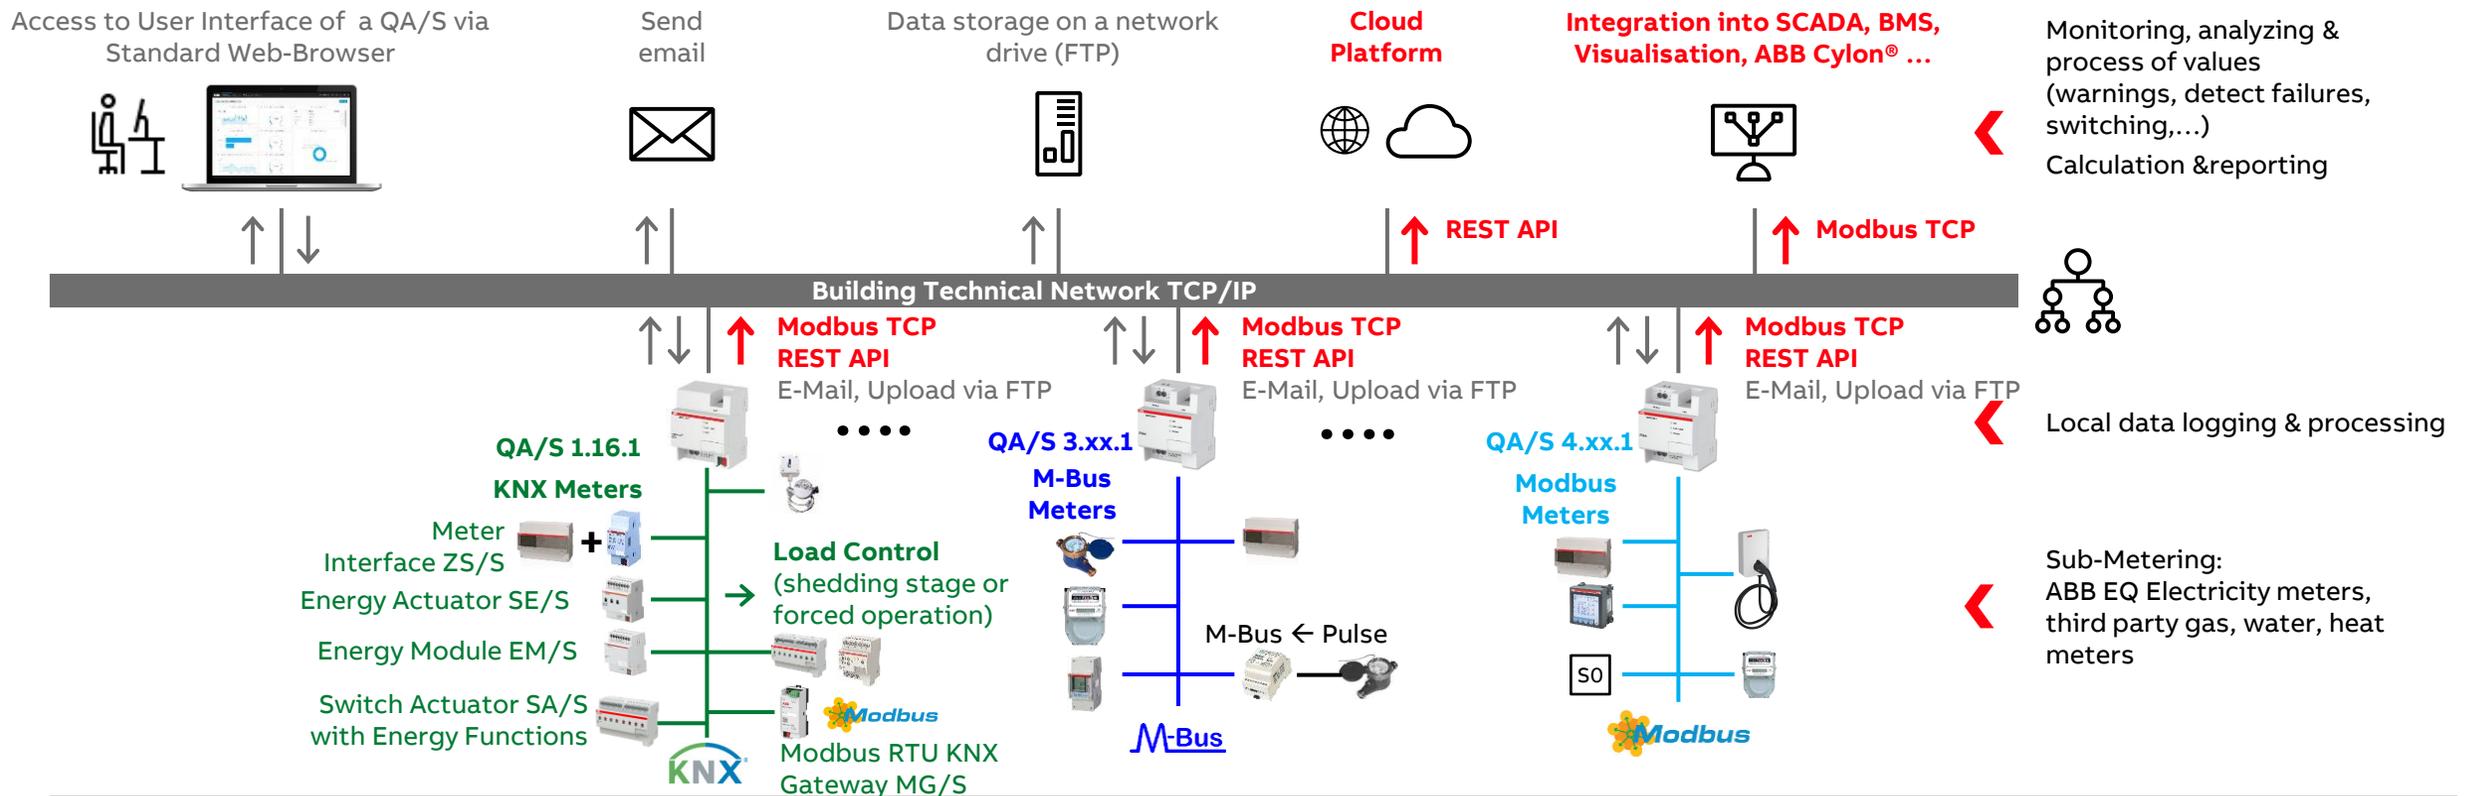

ABB EQmatic Energy Analyzer QA/S x.yy.1

Provide measured values

Data sharing via Modbus TCP

- The data transfer via Modbus TCP function is available for forwarding and using measured data in higher-level systems (e.g. building management systems, SCADA etc.)
- A Client-server communication is established via Modbus TCP
- This communication requires a TCP connection to be set up between a client (e.g. a PC) and the server (e.g. the Energy Analyzer QA/S x.yy.1)
- The TCP port 502 reserved for Modbus is used for communication
- If there is a firewall between the server and client, it must be ensured the TCP port configured is opened
- Example: Voltage L1 of meter 1
 - IP address of QA/S: 192.168.1.170
 - Modbus TCP slave ID: 1
 - TCP register address: 523dec

The screenshot shows the ABB EQmatic web interface. The top navigation bar includes 'Management' (highlighted with a red box) and 'Data sharing' (also highlighted with a red box). The 'Data sharing' page has a 'Modbus TCP' option selected under 'Rest API'. Below this, the 'Mapping configuration' is set to 'Default', and 'Enable static register mapping' is toggled on. A 'Reload register mapping' button is visible. A table lists two Modbus TCP slave configurations. The first row is highlighted with a red box, and a red arrow points to the 'TCP ENABLED' checkbox.

Provide measured values

Data sharing via REST API

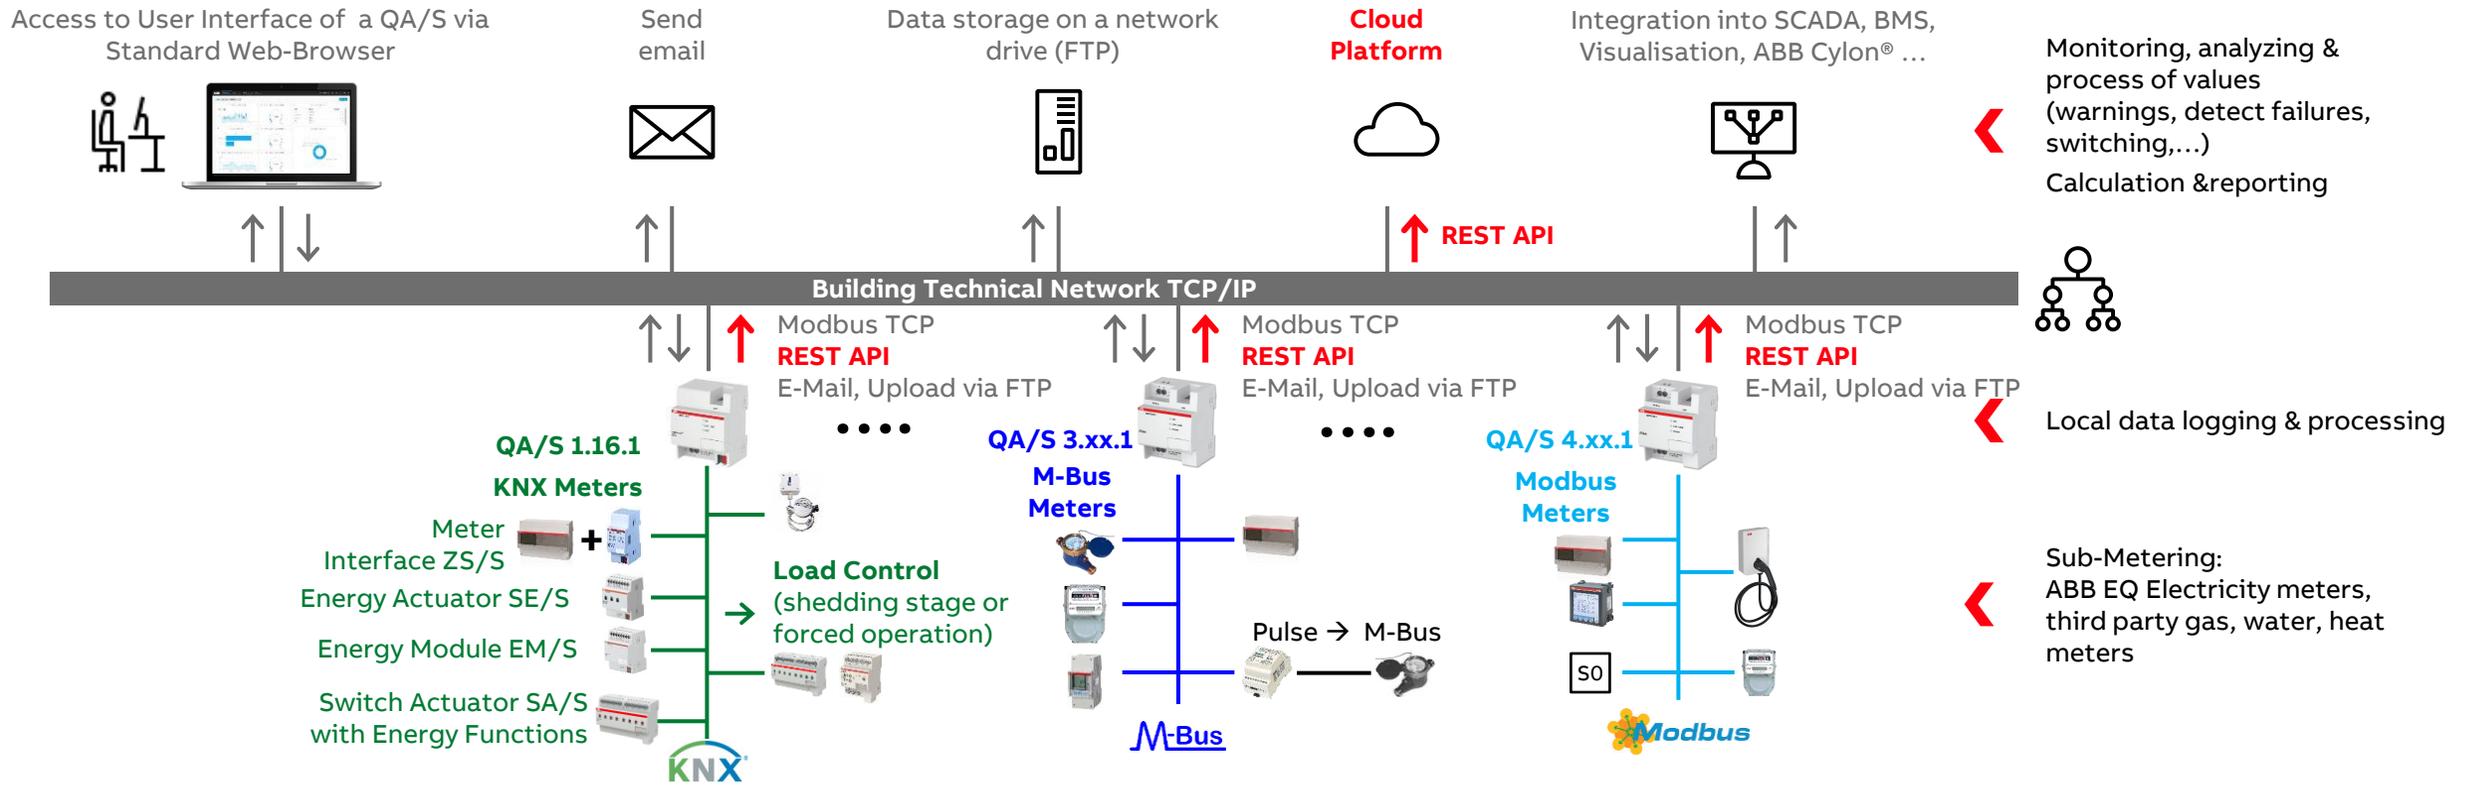

ABB EQmatic Energy Analyzer QA/S x.yy.1

Provide measured values

Data sharing via REST API

Representational state transfer (REST) is a software architectural style that defines a set of constraints to be used for creating Web services

→ provide interoperability between computer systems on the Internet

An application programming interface (API) is an interface or communication protocol between a client and a server intended to simplify the building of client-side software

Software information:

- Description of the “REST API”
- Documentation “ABB EQmatic REST API”

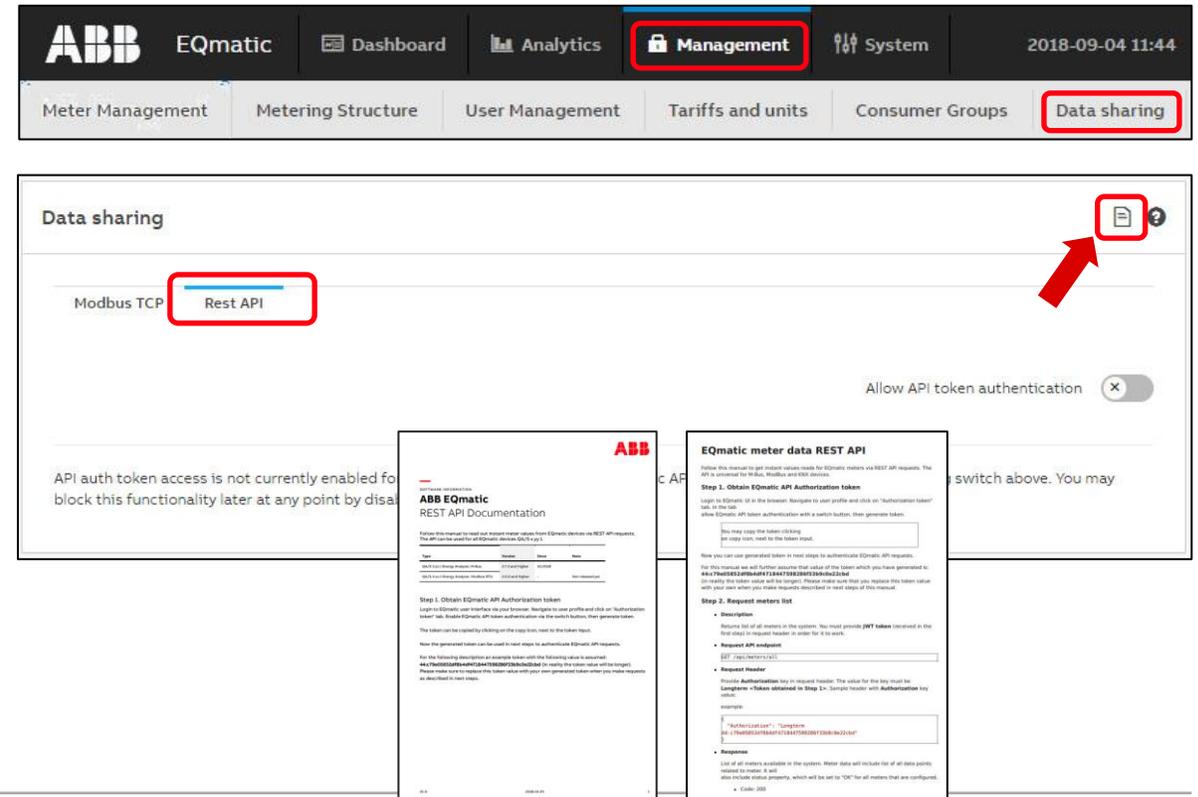

ABB EQmatic Energy Analyzer QA/S x.yy.1

Provide measured values

Data sharing via REST API

Authentication tokens allow usage of EQmatic API

Click “Action” dropdown to generate an API authentication token

The screenshot shows the ABB EQmatic web interface. The top navigation bar includes 'ABB EQmatic', 'Dashboard', 'Analytics', 'Management' (highlighted with a red box), and 'System'. Below this, a secondary navigation bar contains 'Meter Management', 'Metering Structure', 'User Management', 'Tariffs and units', 'Consumer Groups', and 'Data sharing' (highlighted with a red box). The main content area is titled 'Data sharing' and features a 'Modbus TCP' tab and a 'Rest API' tab (highlighted with a red box). A toggle for 'Allow API token authentication' is set to 'On'. A text block explains that below is a list of Auth tokens generated by the user, which can be revoked. A table lists the tokens with columns for 'NAME', 'TOKEN', and 'CREATED ON'. The first row shows a token for 'EIMo2904' created on '21/01/2020 09:59:35'. An 'Actions' dropdown menu is open for the first token, showing 'Create auth token' and 'Remove' options, with a red arrow pointing to the 'Create auth token' button.

	NAME	TOKEN	CREATED ON
<input type="checkbox"/>	EIMo2904	2:b9a5eb0e5ab8b0a327c51e2a0d162b1c33b5f96f909f5891e	21/01/2020 09:59:35

Collection, management and storage of meter data from QA/S via Modbus TCP in a BMS, Visualisation, ...

ABB EQmatic Energy Analyzer QA/S x.yy.1

Collection, management and storage of meter data from QA/S via Modbus TCP

System overview – Data sharing via Modbus TCP, conversion via a KNX interface and forwarding to KNX

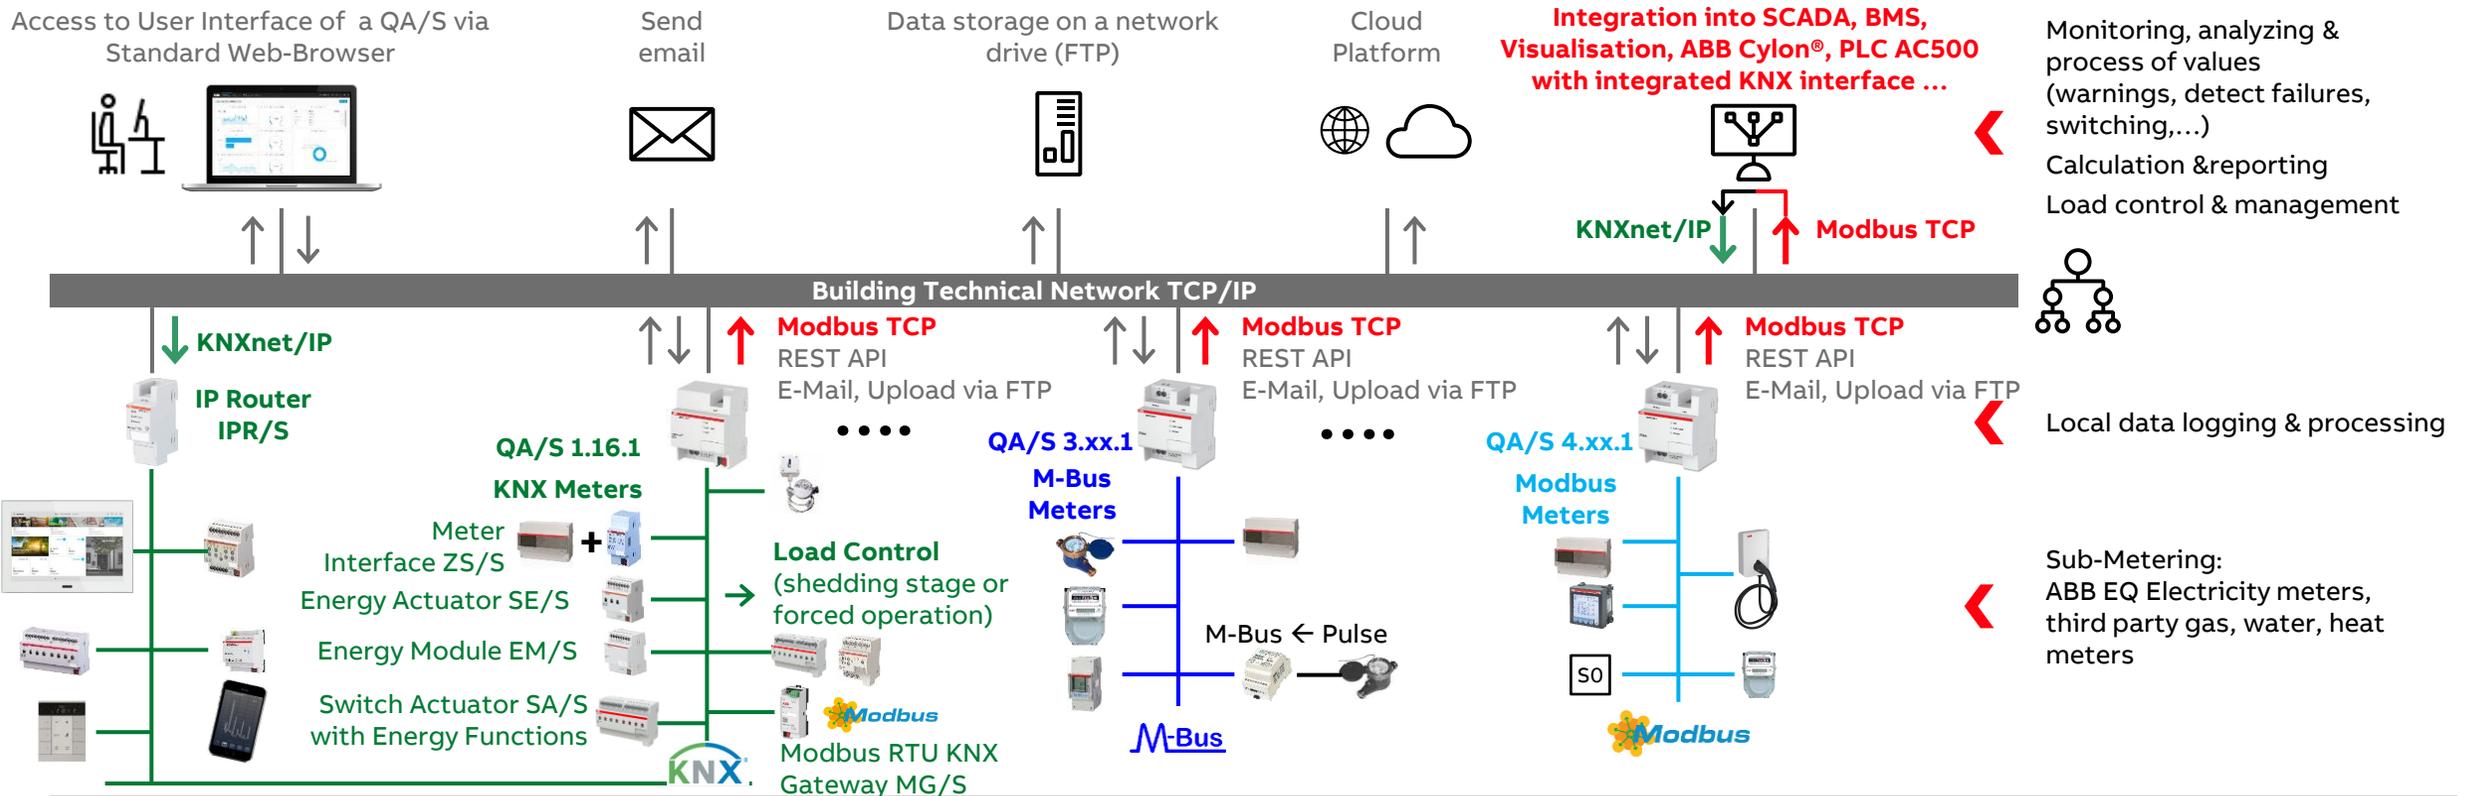

ABB EQmatic Energy Analyzer QA/S x.yy.1

Collection, management and storage of meter data from QA/S via Modbus TCP

Building management software “NETxAutomation”

Building management software for medium-sized and enterprise building automation projects

Servers and clients based on open standards

KNX, BACnet, Modbus, OPC, interfaces to hotel management systems, access control etc.

Through the connection of hotel management software like MICROS Fidelio/Opera or Protel with the building management system, data of the guest can be integrated

Building management software

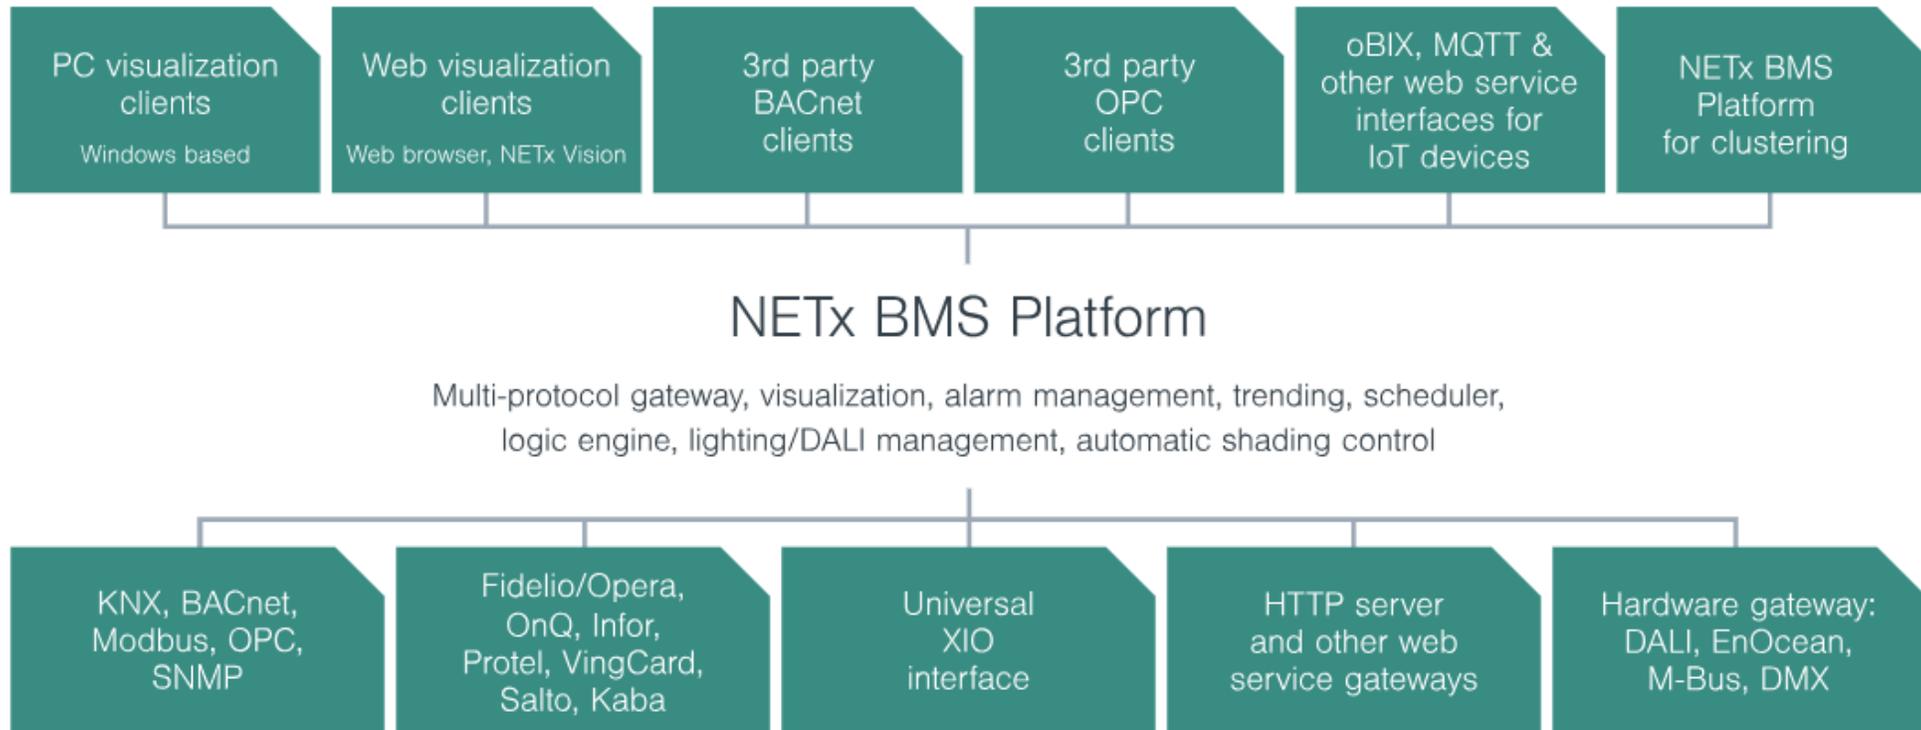

ABB EQmatic Energy Analyzer QA/S x.yy.1

Collection, management and storage of meter data from QA/S via Modbus TCP

Visualisation software “EisBaer SCADA”

EisBaer SCADA is an innovative and cost-efficient software for the visualisation and automation of building and machine intelligence

EisBaer SCADA offers a large range of potential applications, from the control of single rooms or machines, apartments or houses through to largescale buildings or whole building complexes

An intuitive graphical editor with flexible menus, convenient layout tools and customizable function templates facilitates the creation of user interfaces for your applications

The software provides interfaces for a wide variety of control and IT systems and is therefore a universal platform

Multiple interfaces to KNX, OPC, BACNet, Modbus, MBus, DMX, CAN Bus, ESPA 4.4.4, Sonos, Fidelio, Z-Wave, Tesla, Siemens Logo!, Profibus, BOSE, Revox Voxnet, ekey, Philips Hue, WAGO PFC, ZigBee, SNMP, ABB CMS, RAPIX, IRTrans, and many more

ABB EQmatic Energy Analyzer QA/S x.yy.1

Collection, management and storage of meter data from QA/S via Modbus TCP

Visualisation software “EisBaer SCADA”

- Free editor incl. simulation mode
- Server is running as a Windows service
- Unlimited number of clients – no cost
- Free software updates
- Free Smart Clients for iOS, Android, Windows Phone and Windows RT
- Alarm Manager for unlimited messages according to DIN 19235 and data logging in SQL-based database
- Drivers and interfaces to KNX, OPC DA / UA / XML, DMX, MODBUS TCP / RTU / UDP, SONOS, IrTrans, ABB CMS, ABB M2M, Rapix, C-Bus, BACnet (server and / or client)
- Generation of templates with complete Modbus registers

ABB EQmatic Energy Analyzer QA/S x.yy.1

Collection, management and storage of meter data from QA/S via Modbus TCP

Visualisation software “EisBaer SCADA”

Available MODBUS interfaces:

- Generic MODBUS RTU
- Generic MODBUS TCP
- Generic MODBUS UDP
- ABB CMS 600
- ABB M2M
- Templates for A4x payer, XT 4 ACB and Emax2MCB
- Templates for QA/S x.64.1
- ABB EV AC-charger
- ... and more

ABB EQmatic Energy Analyzer QA/S x.yy.1

Collection, management and storage of meter data from QA/S via Modbus TCP

Visualisation software “EisBaer SCADA”: Editor

The screenshot shows the EisBaer SCADA Editor interface. The main window displays a table of data for 'Floor 03 - open office' connected via Modbus TCP. The table includes metrics for Active Imported Energy Total, Active Imported Power Total, Voltage L1, and Current L1 for both Lighting and Cooling systems. A 3D model of the ABB EQmatic Energy Analyzer is shown next to the table. The interface also features a search bar, a diagram view, and a communication table at the bottom.

Floor 03 - open office		
	Lighting	Cooling
Active Imported Energy Total	2.210kWh	.610kWh
Active Imported Power Total	44.4 W	14.7 W
Voltage L1	230.8 V	230.9 V
Current L1	0.193 A	0.065 A

Run time

Data sharing via Modbus TCP

Floor 03 - open office		
	Lighting	Cooling
Active Imported Energy Total	2,200kWh	0,610kWh
Active Imported Power Total	44,7 W	14,8 W
Voltage L1	231,2 V	230,9 V
Current L1	0,194 A	0,065 A

The 3D model shows the physical device with its various ports and labels, including 'Modbus TCP' and 'L1'.

Live Database Options

Chart

Suche

- ✓ Cooling: Active Imp...
- ✓ Lighting: Active Im...

The chart displays power consumption in Watts over time. The Y-axis ranges from 0 to 40 Watts. The X-axis shows time from 10:45:00 to 10:50:00. The Lighting system (blue area) shows a peak of approximately 40 Watts around 10:47:00. The Cooling system (yellow area) shows a peak of approximately 15 Watts around 10:49:00.

ABB EQmatic Energy Analyzer QA/S x.yy.1

Collection, management and storage of meter data from QA/S via Modbus TCP

Settings of component “Value driven text”: Energy

The screenshot shows the software interface for configuring a 'Value driven text' component. The main display area shows a grid with data for 'Floor 03 - open office', including 'Active Imported Energy Total' (2.210kWh), 'Active Imported Power Total' (44.4 W), and 'Voltage L1' (230.8 V). A red box highlights the 'Active Imported Energy Total' value. The 'Properties' panel on the right shows the component name 'Active Imported Energy Total (Meter 1)' and the 'Undefined text' field set to '###,000kWh'. The 'Settings' section shows a factor of '0.01'.

Settings of component “Value driven text”: Power

The screenshot shows the software interface for configuring a 'Value driven text' component. The main display area shows a grid with data for 'Floor 03 - open office', including 'Active Imported Energy Total' (2.210kWh), 'Active Imported Power Total' (44.4 W), and 'Voltage L1' (230.8 V). A red box highlights the 'Active Imported Power Total' value. The 'Properties' panel on the right shows the component name 'Active Imported Power Total (Meter 1)' and the 'Undefined text' field set to '##,0 W'. The 'Settings' section shows a factor of '0.01'.

ENERGY OUT	DataPoint4OctetSignedValue	05/4/002	Energy.Modbus TC...	Net10
POWER IN	DataPoint4OctetSignedValue			Net3
POWER IN - constant value	DataPoint4OctetSignedValue			
POWER OUT	DataPoint2OctetFloatValue	05/4/003	Energy.Modbus TC...	Net11
VOLTAGE IN	DataPoint4OctetSignedValue			Net1
VOLTAGE IN - constant value	DataPoint4OctetSignedValue			
VOLTAGE OUT	DataPoint2OctetFloatValue	05/4/001	Energy.Modbus TC...	Net9

Divide by multiplier and convert integer to floating point

- The QA/S sends the values with a factor (multiplier)
- These values must be multiplied by the multiplier and converted from integer to KNX data types (float value)

The screenshot shows the 'Graphical Logic' component settings in the software. The 'Logic editor' shows a logic diagram with a multiplier block. The 'Cyclical calculation interval [ms]' is set to 499. The 'Logic On/Off' checkbox is checked. The 'Password' field is empty.

Example "Voltage":

- Multiplier 0.1 → Multiply by 0.1
- Signed 32-bit (INT32) → 4 byte float value

CODING	UNIT	MULTIPLIER	NAME
Signed 32-bit (INT32)	V	0.1	Voltage L1

ABB EQmatic Energy Analyzer QA/S x.yy.1

Collection, management and storage of meter data from QA/S via Modbus TCP

Settings of “KNX driver”

The screenshot displays the ETS software interface for configuring a KNX driver. On the left, a 3D model of the ABB EQmatic Energy Analyzer QA/S is shown with a green KNX module. The Properties panel on the right shows the component name 'KNX1' and its dimensions: Width [pixel] 108, Height [pixel] 107, X 1017, Y 190, and Z 19. The Communication panel shows a tree view of the project structure, including 'Energy Analyzer QA/S', 'Modbus TCP', and 'KNX1'. The 'Dynamic' section under 'KNX1' lists several data points and driver settings, such as 'DataPoint4OctetSignedValue, Num...', 'DataPoint4OctetFloatValue, Float 32...', 'Driver On/Off', 'Driver status', 'ETS4 Logging (On/Off)', 'Initialize KNX data during act...', 'Monitor', 'Read values from KNX in prog...', 'Send active', 'Start/Stop reading values fro...', and 'Status table'.

ETS: Group monitor

The screenshot shows the ETS Group Monitor window. The interface includes a toolbar with buttons for Start, Stop, Clear, Open, Save, Print, Replay Telegrams, Options, and Group Functions. Below the toolbar, there are input fields for Group Address, Data point type (set to 1.001 switch), Delay time[sec] (set to 0), and Send cyclically (unchecked). The main area displays a table of monitored groups.

Configuration of the Energy Analyzer QA/S 4.xx.1 Modbus with a Terra AC Wallbox

Configuration of the Energy Analyzer QA/S 4.xx.1 Modbus with a Terra AC Wallbox

Smarter mobility – charging infrastructure for electric vehicles

- ABB offers a total EV charging solution from compact, high-quality AC Wallboxes, reliable DC fast charging stations with robust connectivity, to innovative on-demand electric bus charging systems, we deploy infrastructure that meet the needs of the next generation of smarter mobility
- The Terra AC Wallbox is a powerful yet cost-effective charging solution for electric vehicles, which is characterized by its range of functions, in particular through digital integration in the apps and portals or energy management systems supplied
- Whether in a single/multi-family house, functional building or in the parking garage

Configuration of the Energy Analyzer QA/S 4.xx.1 Modbus with a Terra AC Wallbox

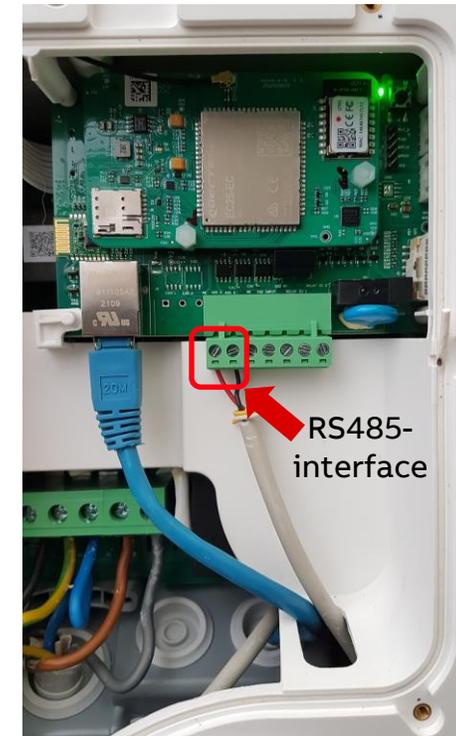

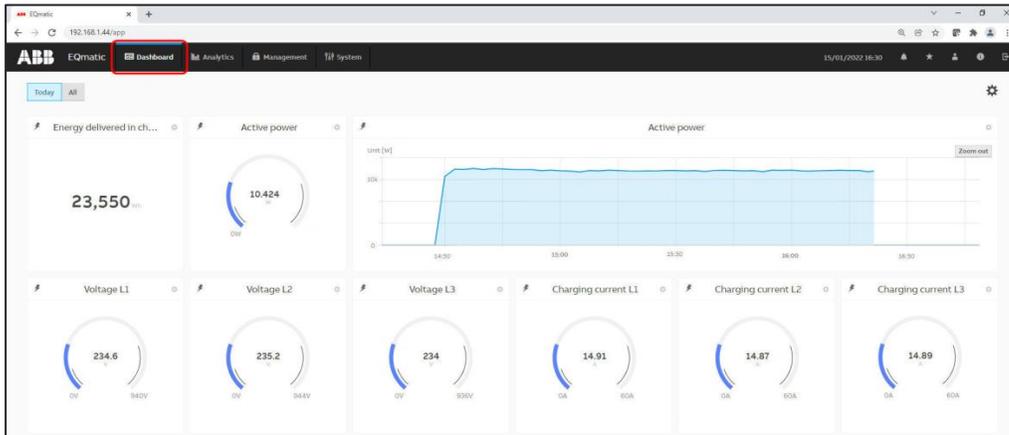

System Overview

Configuration of the Energy Analyzer QA/S 4.xx.1 Modbus with a Terra AC Wallbox

Terra AC Wallbox

- A Terra AC Wallbox can communicate with the ABB EQmatic Energy Analyzer QA/S 4.xx.1 Modbus via the integrated RS485 interface using the Modbus RTU protocol
- The meter data measured by the wallbox can thus be displayed and further processed in the Energy Analyzer QA/S

Configuration of the Energy Analyzer QA/S 4.xx.1 Modbus with a Terra AC Wallbox

Step-by-Step Guide

It shows step by step how the Energy Analyzer QA/S and the Terra AC Wallbox are configured

- Setting the wallbox as a “Secondary device” and setting the Modbus parameters (baud rate, parity, ...) with the “TerraConfig” app
- Configuration of the Energy Analyzer QA/S Modbus with addition of a “Meter model” and the “data points for register mapping”
- The Wallbox can then be configured like a meter

Configuration of the Energy Analyzer QA/S 4.xx.1 Modbus with a Terra AC Wallbox

Configuration of the Terra AC Wallbox

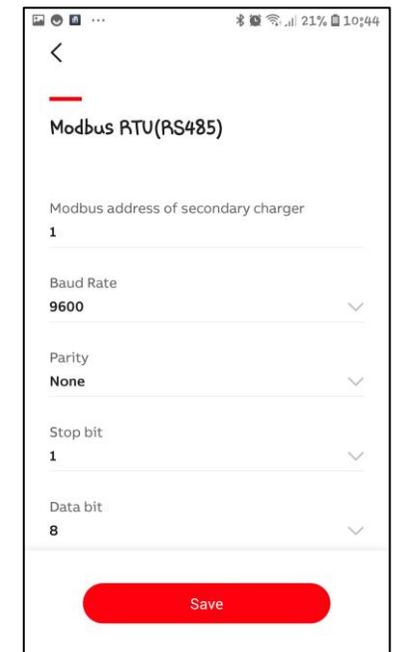

- The Energy Analyzer is the only “Primary Device” and all meters - including the Terra Wallbox – are “Secondary Devices”
- A secondary Modbus device reads and writes from the primary device of the local Modbus controller (Energy Analyzer QA/S)
- When delivered, the Terra Wallbox acts as a “Primary device”
- When operating on an Energy Analyzer QA/S, however, this must be operated as a “Secondary device”
- These and other settings (Modbus RTU baud rate, parity, ...) are made with the “TerraConfig” app

TerraConfig App

Load Balance
“Secondary device”

Modbus RTU
parameter

Configuration of the Energy Analyzer QA/S 4.xx.1 Modbus with a Terra AC Wallbox

Konfiguration des Energy Analyzer QA/S Modbus

- The wallbox must be added and configured as a new meter in the Energy Analyzer QA/S
- All settings for the connected Modbus devices are made in the “Meter Management Menu”
- The wallbox is not available in the Energy Analyzer QA/S library by default (firmware version V 2.0.5)
- Therefore, a “Meter model” must be added manually and then the “Data points for register mapping” must be configured
- After that, the wallbox can be added and configured as a meter

Meter model

* Product name: Terra AC W22

* Register mapping configuration: Create new from template

Minimum readout interval [s]: Type number...

* Register Mapping Template: Blank register mapping

* Name: ABB Terra Wallbox

* Medium: Electricity

Manufacturer: ABB

Version: 1

Invalid Value: Type hexadecimal value...

Register Read Limit: Type number...

Back Save

Add a Meter model

Data point configuration

* Modbus Function Code: Read input registers (0x04)

* Start register address: 0x401C

* Register data type: Unsigned 32-bit (UINT32)

* Group: Instantaneous

* Data Point: Active Imported Power Total

* Unit: W

* Multiplier: Predefined, 1 (none)

Description: Active power

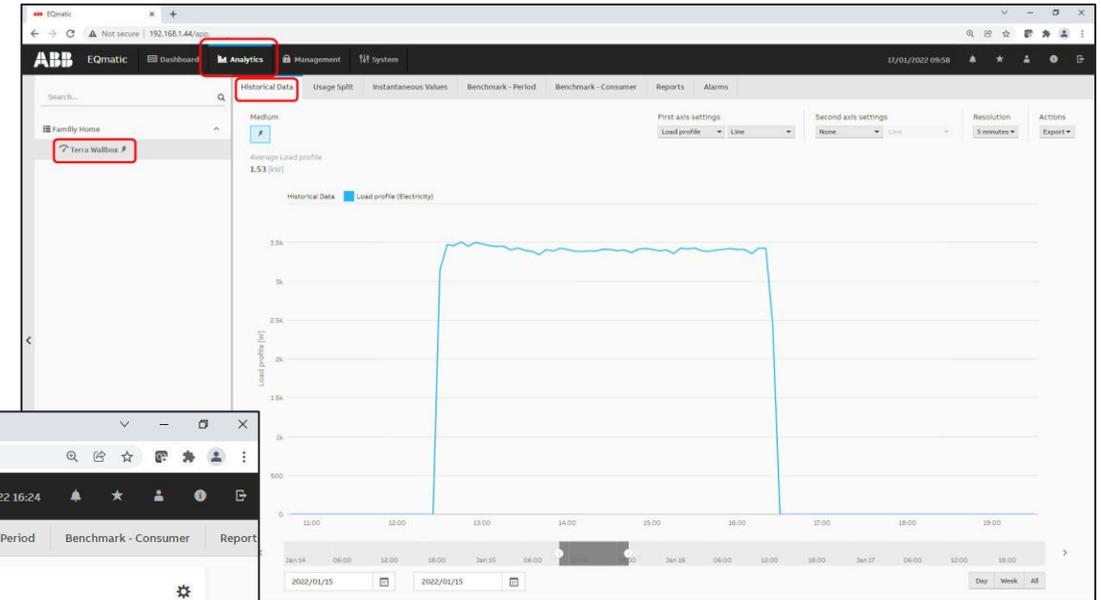

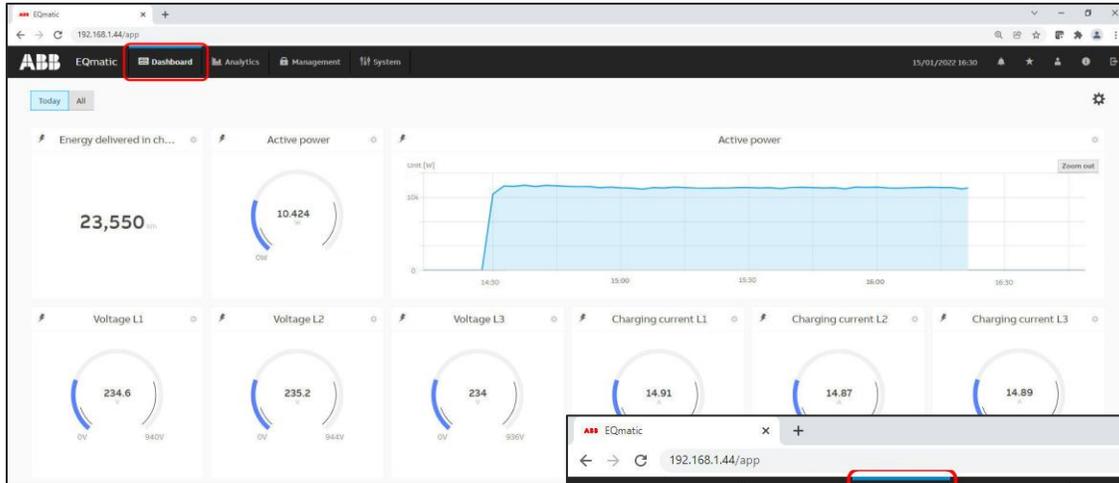

Most significant byte first (MSB) Least significant byte first

Most significant word first (MSW) Least significant word first

Configuration of data points for register mapping

Configuration of the Energy Analyzer QA/S 4.xx.1 Modbus with a Terra AC Wallbox

The screenshot shows the ABB EQmatic Analytics page with the 'Instantaneous Values' tab selected. The 'Electricity' section is active, displaying a table of real-time data for the Terra Wallbox.

Parameter	Value
Current L1	14.90 A
Current L2	14.86 A
Current L3	14.60 A
Voltage L1	233.60 V
Voltage L2	234.80 V
Voltage L3	234.50 V
Active Imported Power Total	13,305 W
Active Imported Energy Total	18,322 Wh
