Down Scroll

Raise and Lower

Parameter Value
or Parameter X
Y
Z

Function Key

'Alarm acknowledge' or 'Home' – See Programming Guide, 'Advanced Configuration'

Pen Lift

Raises and lowers the chart pen.

Note. All programming is carried out using the faceplate keys and displays.

ABB MEASUREMENT & ANALYTICS | IM/C1900-QR

C1900 recorder Quick reference guide

Installation Guide

Accessories	2
Electrical installation	6
Siting	3
Mounting/dimensions	4
Power supplies	12
Inputs/outputs	7

Operating Guide

Alarms	
Acknowledge	10
LED status	10
Chart	4
Displays & controls	5, 6
Fault-finding	13
Input error messages	3
Power-up error codes	2
Pen – fitting	4
Process variable	9
Security Access	
Configuration level	12
Password	12
Tune level – access	12
Self-test	2
Time/date	9
Totalizer	11
Analog outputs	19
Chart set up	9
Configuration level	3, 26
Digital outputs	17
Function keys	27
Inputs (PV, RSP, P-FB)	4
Logic equations	28
Logic inputs	28
Passwords	2, 22
Pen	8
Process variable – see Inputs	
Relays	15
Retransmission outputs – see Analog outputs	
Scale adjust (span/offset)	23
Spot calibration – see Scale adjust	

Programming Guide

Alarms	10
Analog outputs	19
Chart set up	9
Configuration level	3, 26
Digital outputs	17
Function keys	27
Inputs (PV, RSP, P-FB)	4
Logic equations	28
Logic inputs	28
Passwords	2, 22
Pen	8
Process variable – see Inputs	
Relays	15
Retransmission outputs – see Analog outputs	
Scale adjust (span/offset)	23
Spot calibration – see Scale adjust	

Setting analog input links

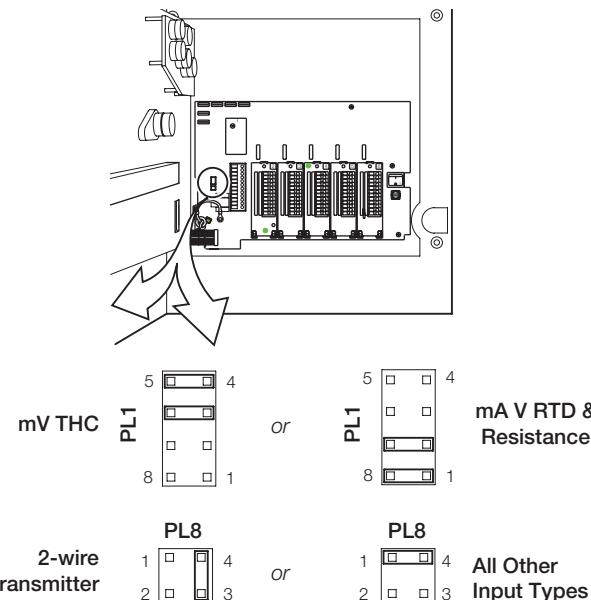

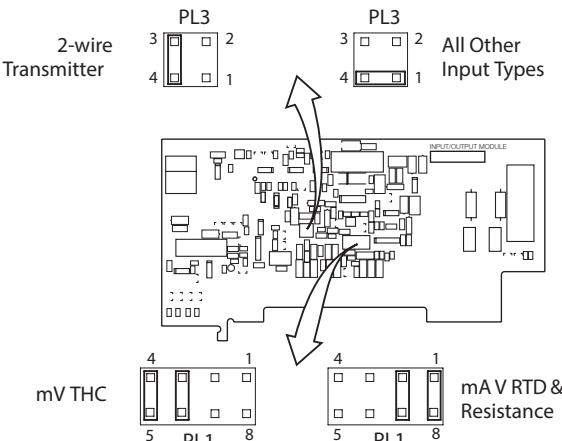

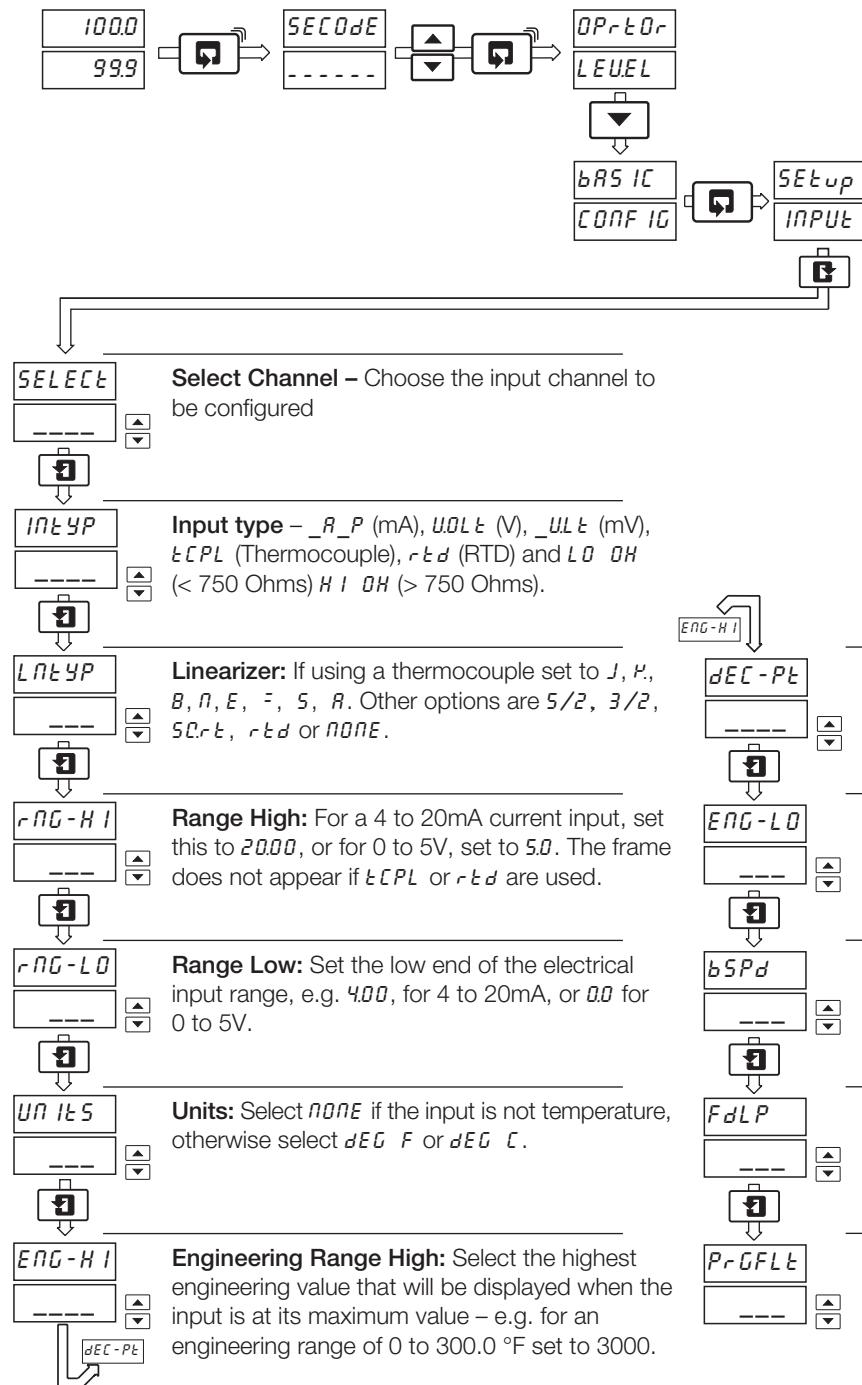

Fig. 1 Input Links – Channel 1

Warning. Ensure that the unit is isolated from all power supplies before removing I/O boards.

Fig. 2 Input Links – Channels 2 to 4 (If fitted)

Configuring analog inputs

Information. The alphabet used to display page and parameter titles is as follows:

A - <i>A</i>	M - <i>-</i>
B - <i>b</i>	N - <i>N</i> or <i>n</i>
C - <i>C</i> or <i>c</i>	O - <i>O</i> or <i>o</i>
D - <i>d</i>	P - <i>P</i>
E - <i>E</i>	Q - <i>Q</i>
F - <i>F</i>	R - <i>r</i>
G - <i>G</i>	S - <i>S</i>
H - <i>H</i> or <i>h</i>	T - <i>t</i>
I - <i>I</i>	U - <i>U</i>
J - <i>J</i>	V - <i>U</i>
K - <i>K</i>	Y - <i>y</i>
L - <i>L</i>	

Decimal Point: Select the decimal point position for the process variable, e.g. 300.0.

Engineering Range Low: Select the lowest engineering value that will be displayed when the input is at its minimum value – e.g. for an engineering range of 0 to 300.0 °F set to 0.0.

Broken Sensor Drive: Determine pen action when the input signal fails: $None$ – pen follows failed input; UP – pen driven to full scale; dn – pen driven to zero scale.

Fault Detection Drive: Determine maximum input travel outside engineering range before an error is detected. E.g. for a 0 to 300°F range, a 10% fault level will trigger at 330°F.

Input Filter: Adjust the instrument response time from 0 to 60 seconds in one second increments to reduce pen jump & dampen out noisy signals.
