# Miniature circuit breakers

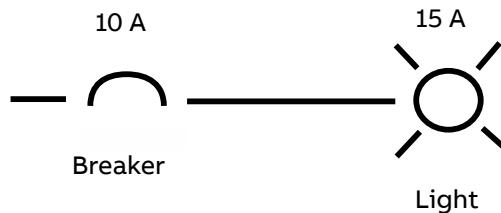

## Introduction and definition

The circuit breaker plays an important role in providing overcurrent protection and a disconnect means in electrical networks. Recent advancements in circuit breaker technology has increased breaker performance and protection.

### Overload

An overload is a slow and small overcurrent situation that causes the ampacity and temperature of the circuit to gradually increase over time. This type of event is characterized by a slight increase in the load (ampacity) on the circuit and is interrupted by the thermal trip unit of the breaker.

#### Thermal Example

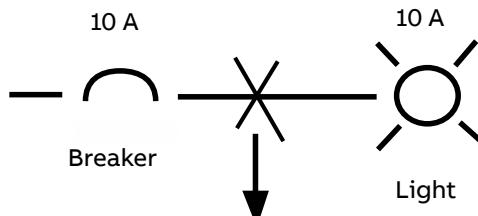

The light draws more than 10 amps for an extended period of time creating a thermal overload.

### Short circuit

A short circuit is a rapid and intense overcurrent situation that causes the ampacity of the circuit to increase. This type of event is characterized by a dramatic increase in the load (ampacity) on the circuit and is interrupted by the magnetic trip unit of the breaker.

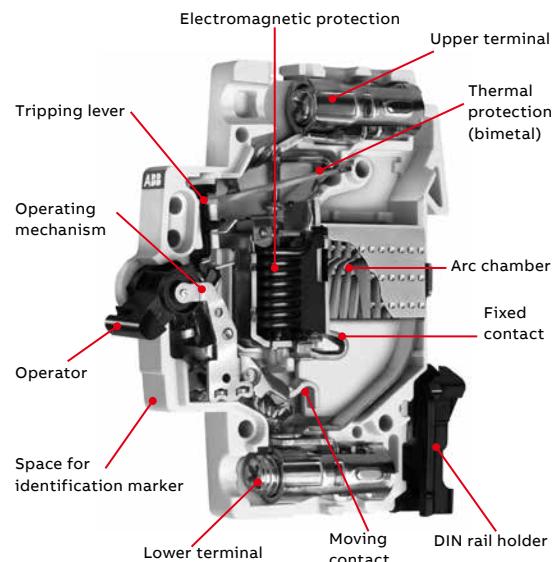

#### Magnetic Example

The wire connected between the light and breaker is cut and shorted to ground creating a short circuit.

### Breaker definition

A breaker is a device designed to isolate a circuit during an overcurrent event without the use of a fusible element. A breaker is a resettable protective device that protects against two types of overcurrent situations: overload and short circuit

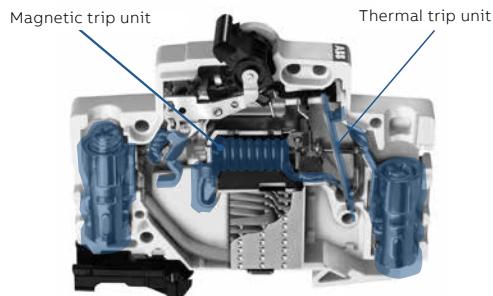

# Miniature circuit breakers

## Circuit breaker construction

### Thermal / Magnetic trip units

ABB Current Limiting Breakers use an electromechanical (Thermal/Magnetic) trip unit to open the breaker contacts during an overcurrent event. The thermal trip unit is temperature sensitive and the magnetic trip unit is current sensitive. Both units act independently and mechanically with the breaker's trip mechanism to open the breaker's contacts.

#### Current flow during operation:

All highlighted components are energized during operation

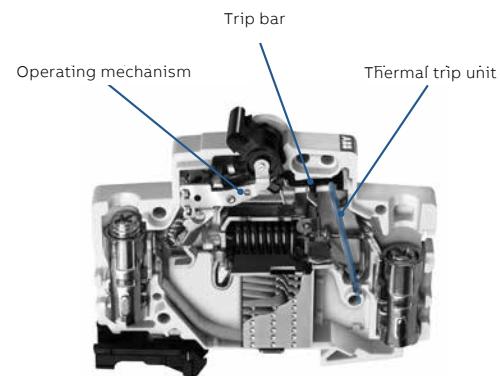

### Overload protection

The thermal trip unit protects against a continuous overload. The thermal unit is comprised of a bimetal element located behind the circuit breaker trip bar and is part of the breaker's current carrying path. When there is an overload, the increased current flow heats the bimetal causing it to bend. As the bimetal bends, it pulls the trip bar that opens the breaker's contacts.

The time required for the bimetal to bend and trip the breaker varies inversely with the current. Because of this, the tripping time becomes quicker as current increases in magnitude.

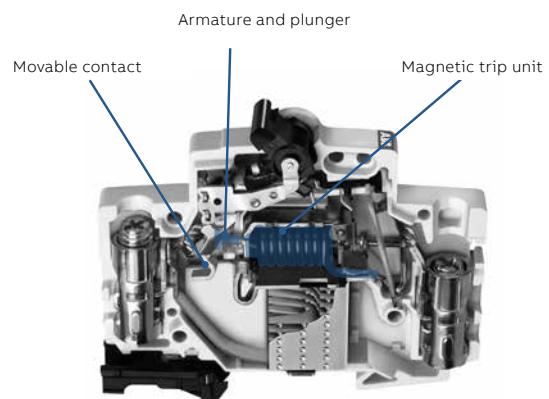

Overload protection is applicable to any installa-

tion, conductor, or component that can be subjected to low-magnitude but long-time overcurrents. Low-magnitude, long-time overcurrents can be dangerous because they reduce the life of the electrical installation, conductor, and components. If left unchecked, fire could result.

### Magnetic trip unit

The magnetic trip unit protects against a short circuit. The magnetic trip unit is comprised of an electromagnet and an armature.

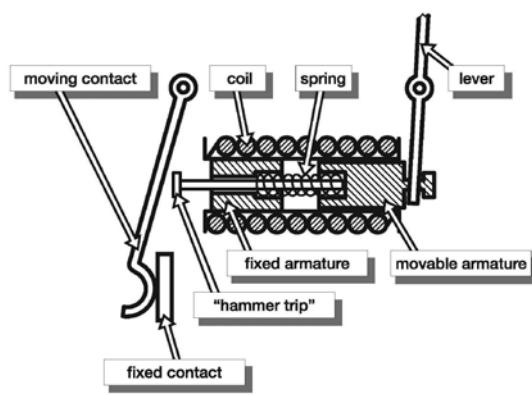

# Miniature circuit breakers

## Circuit breaker construction

### Components of a magnetic trip unit

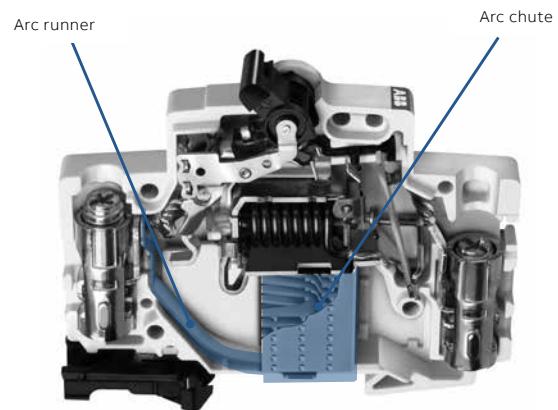

When there is a short circuit, a high magnitude of current passes through the coils creating a magnetic field that attracts the movable armature towards the fixed armature. The hammer trip is pushed against the movable contact and the contacts are opened. The opening of the breaker's contacts during a short circuit is complete in 0.5 milli-seconds.

### Arc runners / arc chutes

The arc runner guides the electric arc away from the open contacts into the arc chute where it is extinguished.

During an overload or short circuit event, the contacts of the breaker separate, and an electrical arc is formed between the contacts through air. The arc is moved into the arc chute by "running" the arc down the interior of the breaker along the arc runner. When the arc reaches the arc chute, it is broken into small segmented arcs. The segmented arcs split the overall energy level into segments less than 25 V. Each 25 V segment does not have a high enough energy level to maintain an arc and all energy is naturally dissipated.

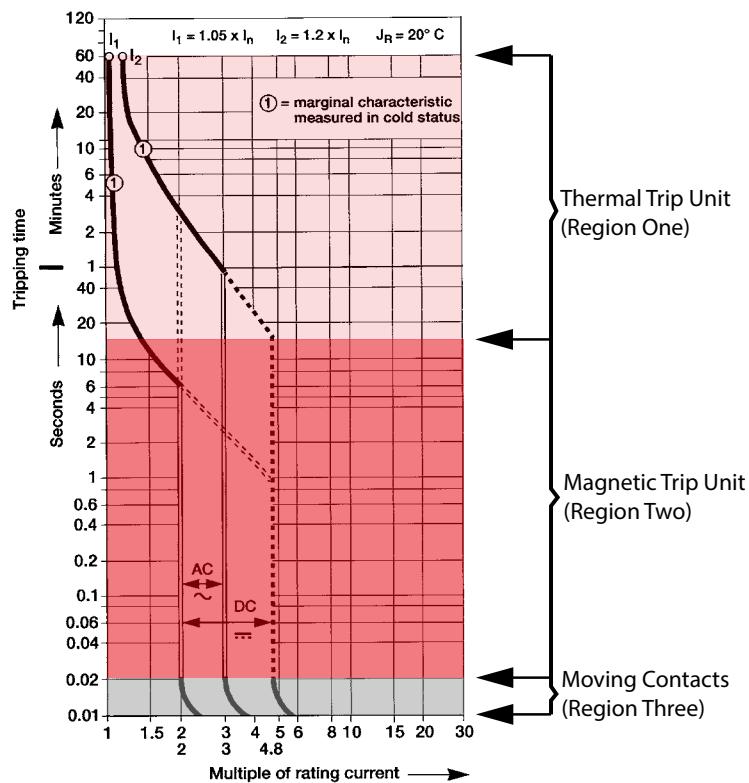

### Breaker's thermal trip (region 1)

The first sloping region of the breaker curve is a graphical representation (next page) of the tripping characteristics of the thermal trip unit. This portion of the curve is sloped due to the nature of the thermal trip unit. The trip unit bends to trip the breaker's trip bar in conjunction with a rise in amperage (temperature) over time.

As the current on the circuit increases, the temperature rises, the faster the thermal element will trip. Example using the curve on next page: If you had a 10 A breaker and the circuit was producing 30 amps of current, the breaker would trip between two seconds and one minute. In this example, you would find the circuit current on the bottom of the graph (multiples of rated current). The first line is 10 amps (10 amp breaker x a multiple of one), the second line is 20 amps (10 amp breaker x multiple of two), and the third line is 30 amps (10 amp breaker x multiple of three). Next, you would trace the vertical 30A line up until it intersects the red portion of the breaker thermal curve. If you follow the horizontal lines on both sides of the red curve to the left, you will see that the breaker can trip as fast as two seconds and no slower than one minute.

# Miniature circuit breakers

## Circuit breaker construction

### Breaker's magnetic trip (region 2)

This region of the breaker curve is the instantaneous trip unit. ABB's miniature circuit breaker's instantaneous trip unit interrupts a short circuit in 2.3 to 2.5 milliseconds. Because of this, the curve has no slope and is graphically represented as a vertical straight line.

See curve example. If you had a 10 amp breaker, the magnetic trip element would interrupt a short circuit between 10 and 30 amps (10 amp breaker x multiple of two and three) in 2.3 to 2.5 milliseconds

### Breaker's contacts (region 3)

This region of the curve is the time required for the contacts of the breaker to begin to separate. The contacts will open in less than .5 milliseconds and is graphically represented by the bottom vertical portion of the curve.

# Miniature circuit breakers

## Circuit breaker current limitation

All ABB miniature circuit breakers are UL tested and certified as current limiting protective devices. Current limiting circuit breakers provide a higher level of circuit protection than typical zero point external breakers.

### 60Hz AC cycle (UL)

UL defines an AC cycle as the potential energy of the wave form traveling from zero-to-positive amplitude, positive-to-zero amplitude, zero-to-negative amplitude, negative-to-zero amplitude 60 times in one second. One cycle is completed every 16.6 milliseconds.

### Current limiting breaker (UL)

UL defines breaker current limitation as a breaker that interrupts and isolates a fault in less than 1/2 of an AC cycle. Half a cycle is completed in 8.3 milliseconds.

### NEC240.2 current limiting

A device that, when interrupting current in its current-limiting range, reduces the current flowing in the faulted circuit to a magnitude substantially less than that obtainable in the same circuit if the device were replaced with a solid conductor having comparable impedance.

### IEC 60947-2 current limiting

A circuit breaker with sufficiently short trip time to prevent the short-circuit current from reaching the peak value which would otherwise be reached.

### ABB's current limiting circuit breakers

ABB current limiting breakers can interrupt and isolate a fault in 1/8 of an AC cycle. The breaker fault interruption is completed in 2.3 to 2.5 milliseconds.

### Zero point extinguishing breakers

A typical zero point extinguishing breaker interrupts a fault and does not isolate the energy. The breaker allows an arc to be present between the open contacts until the AC wave form crosses zero.

When the wave form crosses zero, the potential energy is zero and the arc (fault) naturally extinguishes. The arc could be present for up to 8.3 milliseconds.

### Current limiting breakers and electrical networks

#### current limitation

When a short-circuit condition occurs, the “ideal” current limiting circuit breaker opens before the current waveform can reach its full potential magnitude which occurs at 1/4 cycle (4.17ms). ABB’s current limiting breakers can interrupt a fault in about 1/2 cycle or 2.3 ms to 2.5 ms. ABB’s current limiting breakers interrupt a short circuit in less than 1/8 cycle and limit the amount of current that can reach a circuit. Limiting the available current on the circuit provides additional protection against network, breaker, or bus damage and prevents the tripping of upstream breakers (selective coordination).

### I<sup>2</sup>t (let-thru energy)

The true destructive nature of a short circuit is measured by the time it is available combined with the peak value of the short circuit. The IsqT (Amps Squared over Time) value represents the amount of energy available on a network during a short circuit and is represented by the shaded area on the graph next page.

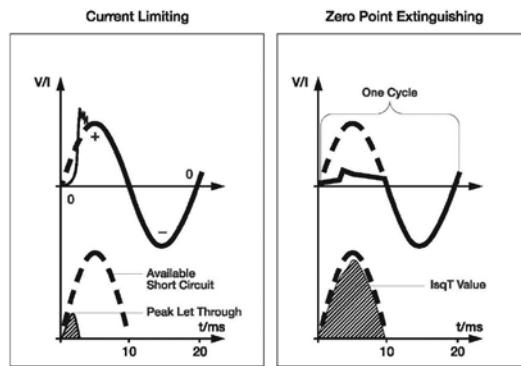

During a short circuit, both magnetic forces and thermal energy combine to damage devices on the electrical network. The level of thermal energy and magnetic forces are directly proportional to the square of the current. The magnetic forces vary as a square of the peak current available and the thermal energy varies as a square of the RMS (root mean square) current available.

ABB’s current limiting breakers will limit the let-through energy to a fraction (1/100) of the value that is available from the network. By comparison, a zero crossing breaker would let through approximately 100 times as much destructive energy as the current limiting circuit breaker [ (100,000A / 10,000A) squared – 100X].

# Miniature circuit breakers

## Circuit breaker current limitation

ABB's current limiting breakers limit the short circuit current to a relatively small magnitude in an extremely short time, which dramatically limits a short circuit's destructive energy.

### Current limiting and zero crossing breakers

During the initial stages of a short circuit, a breaker's contacts open to interrupt the circuit. After the contacts open, an arc forms in the air between the contacts on both the current limiting and zero crossing breaker contacts. What distinguishes a current limiting breaker from a zero crossing breaker is what each breaker does after an arc is formed between the open contacts.

A current limiting breaker "runs" the arc down the breaker arc runner into an arc chute that extinguishes the arc.

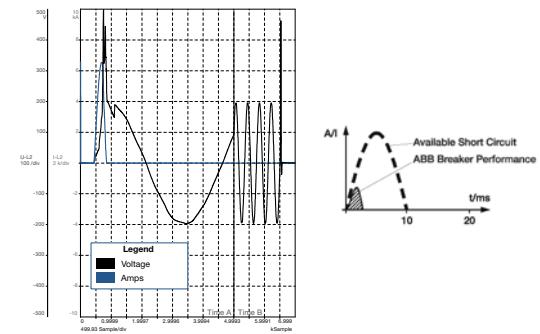

A zero crossing breaker does not attempt to extinguish the arc. The breaker is designed to withstand the energy of the arc long enough for the waveform to cross zero. When the wave form crosses zero the potential energy is zero and the arc naturally extinguishes itself.

ABB's current limiting breakers interrupt the arc en-

ergy in 2.3 ms to 2.5 ms (1/8 cycle) and a zero crossing breaker allows the arc to be present for up to 8.3 ms (1/2 cycle). A zero crossing breaker will let through 100 times as much energy as an ABB current limiting breaker.

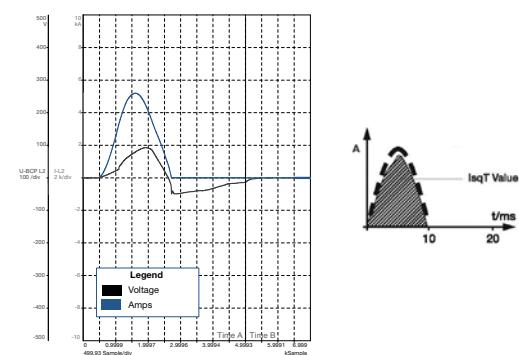

### Current limiting example

The lab test report below details a 20 A S200 series current limiting breaker interrupting a 28 kA fault in 1.7 milliseconds. The total "I Square T" value is 32.0 kA.

### Zero crossing example

The test report below details a 20 A zero point extinguishing breaker interrupting a 9 kA fault in 9 milliseconds. The total "I Square T" value is 104.0 kA.

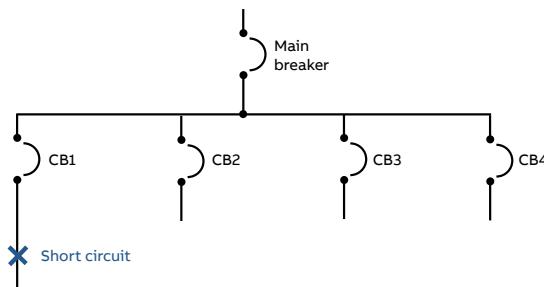

# Miniature circuit breakers

## Selective coordination and series rating

### Definition of selective coordination

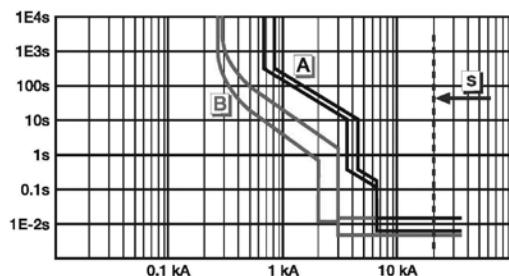

Coordination between the operating characteristics of two or more overcurrent protection devices, so that when an over-current within established limits occurs, the device designated to operate within those limits trips whereas the other devices does not trip.

### Example of breaker coordination

When an over-current event occurs at the branch breaker level (CB1), and the event is within the operating characteristics of the breaker, then the branch breaker should interrupt the circuit (open) and the main breaker should remain closed and energized. The chart below gives a graphical representation of a down stream branch breaker (B curve) and a main breaker (A curve) with coordination. The separation between the curves allows the branch breaker to react to the fault and the main breaker remains closed and energized.

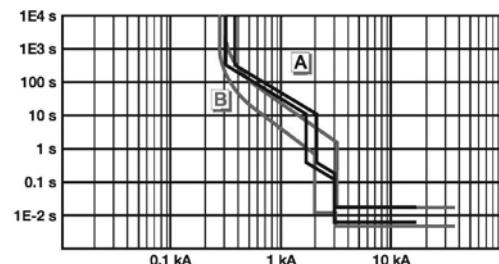

Coordination

### Example of no breaker coordination

Selective breaker coordination is not achieved when there is an overload event at the branch breaker level (MCB1) and both the branch breaker and main breaker interrupt the circuit (open). When there is no breaker coordination, several circuits lose power that should remain operational during and after the overload event. The chart below gives a graphical representation of a down stream branch breaker (B curve) and a main breaker (A curve) without coordination. There is no separation between the curves. The branch breaker will react to a fault and the main breaker will open and de-energize all circuits down stream.

No Coordination

Problems in coordination occur when the branch breaker allows the "I Square T" value of the short circuit to rise to a level that is in the operating range of the upstream main breaker. Proper breaker coordination is easier to achieve with the use of current limiting breakers at the branch level.

### Selective coordination and current limiting

Recent improvements in ABB circuit breaker technology has pushed the performance of breakers to the same level as fuses. The reaction time and tripping characteristics of current limiting breakers are now on par with fuses. This allows ABB to provide a high level of coordination between branch breakers and the main. A current limiting branch breaker will limit the "I Square T" value well below the level

# Miniature circuit breakers

## Selective coordination and series rating

of the operating range of the upstream main breaker. ABB's current limiting branch breakers can coordinate between the main breaker up to 35 kA.

### Selective coordination and zero crossing

Zero crossing breakers do not limit the "I Square T" value. They wait for the wave form to cross zero and allow a high level of let-through energy to pass through the system. The "I Square T" value of a zero crossing breaker is high enough that the main breaker will likely trip during a short circuit. With zero crossing breakers it is extremely difficult to coordinate between branch and main breakers. A typical zero crossing breaker's coordination level is below 10 kA. There are a few manufacturers that have achieved coordination between a branch zero crossing breaker and the main by slowing the performance (protection) of the main breaker.

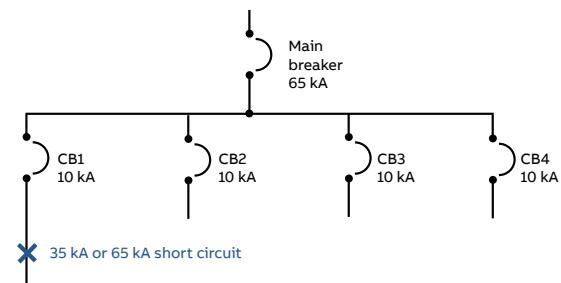

### Selective coordination

Selective coordination is achieved when there is a short circuit on a branch circuit breaker, the branch breaker opens and isolates the fault, and the main breaker remains closed. The rating is usually a value above the "stand alone" interrupting rating of the branch breaker and the "stand alone" rating of the main breaker.

#### Example:

- 65 kA rated main breaker
- 10 kA rated branch breaker
- Coordination between the two breakers up to 35 kA

There can be a short circuit on the branch breaker up to 35 kA where the branch will open (CB1) and the main breaker will remain closed. Although the branch has a 10 kA "stand alone" rating, both the breakers work together to limit the available short circuit to allow the branch (CB1) to isolate the fault.

### Series ratings

Series ratings are different from coordination ratings. Unlike coordination ratings where the branch opens and the main remains closed, a series rated combination is one where both the branch and main breakers open and work together to isolate the fault.

The series rating combination of two breakers is equal to the "stand alone" interrupting value of the main breaker. This is a result of the main breaker let-through value being lower than the "stand alone" interrupting value of the branch breaker.

During a short circuit the main breaker will limit the energy to a level that is below the "stand alone" value of the branch breaker.

#### Example:

- 65 kA rated main breaker
- 10 kA rated branch breaker
- Series combination rating between the two breakers up to 65 kA

There can be a short circuit on the branch breaker up to 65 kA where the branch will open and the main breaker will open. Although the branch breaker (CB1) has a 10 kA "stand alone" rating the main breaker has a let-through value below 10 kA. If there is a fault up to 65 kA on the network, the main breaker will limit the energy to a value less than the rating of the branch breaker (CB1). Both breakers will trip (no coordination), but the network can safely withstand a fault of 65 kA.

# Miniature circuit breakers

## UL489 vs UL1077

### Definition of branch circuits (UL489) and supplemental protectors (UL1077)

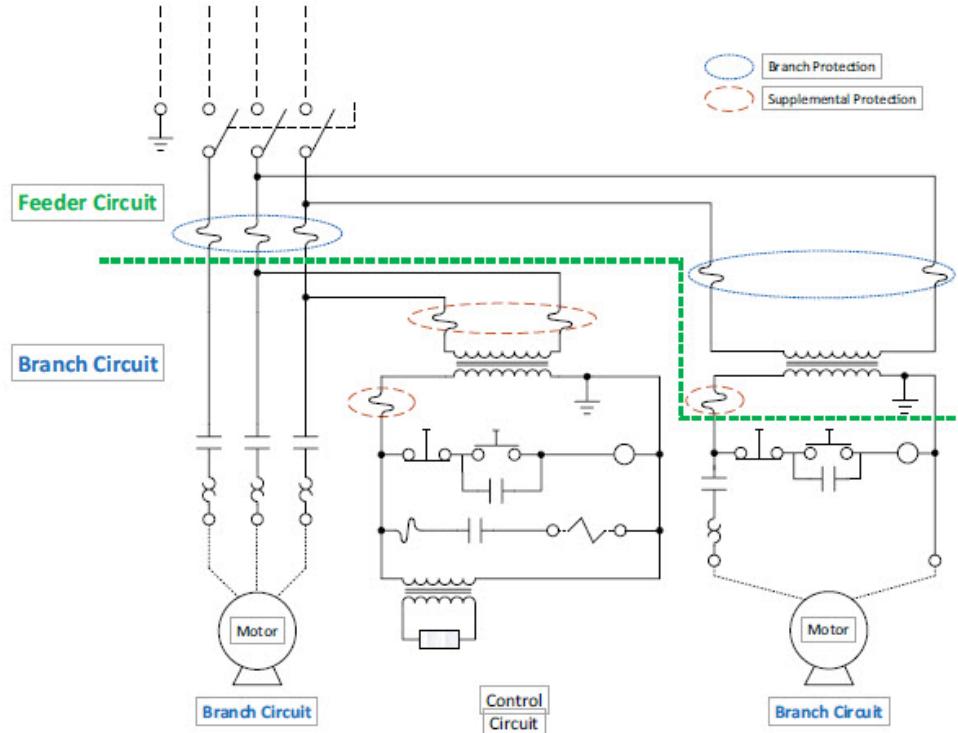

A branch circuit is defined as a circuit that has the first overcurrent device. UL489 has additional spacing requirements (over surface, through air) compared to supplemental protection. Branch protection breakers also have some different spacing, and slight mechanical differences, internally to the breaker, as compared to a Supplemental Protector.

A Supplemental Protector is defined as an overcurrent device for protection of the end circuit. Or, said another way, may be added to a circuit to provide an extra level of protection for a specific component. These devices require the use of an upstream protective device, or Branch Protection. It is not designed to be used as a substitute for Branch Protection (per NEC Article 240.10).

### Where to use supplemental protectors.

If the Branch Protection is adequate to protect the circuit and/or components, a supplemental protector can be inserted. If the supplemental protector is part of the circuit, and then removed, and the Branch protection meets the above protection requirements, the supplemental protector is properly applied.

Drawing below based on UL "Description of terminology," Figure 6.1 effective April 25, 2003 for UL508A, UL489 & UL1077 (UL copyrighted)

# Miniature circuit breakers

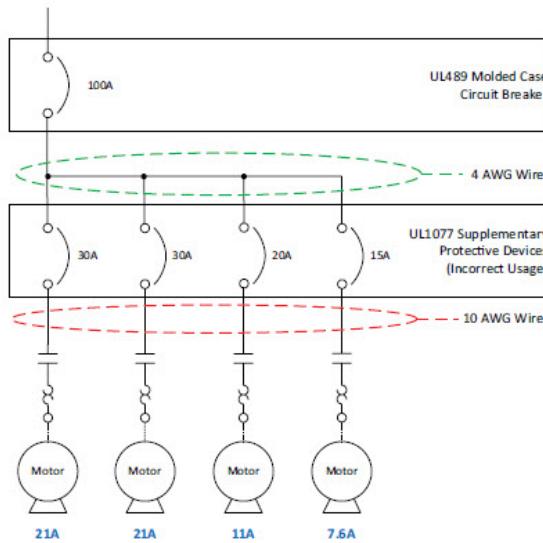

## UL489 vs UL1077

### Misuse of supplemental protection

In this circuit, a UL489 molded case circuit breaker (MCCB) is correctly used as the main breaker for the four motors being controlled. However, each motor is protected by a UL1077 supplemental “miniature breaker.”

This is not correct and violates both the NEC and UL. Each individual motor circuit is a separate branch circuit and requires the use of a UL489 listed circuit breaker.

This is determined by evaluating the conductors feeding the loads. Supplemental protectors must be ignored because they are not listed branch circuit protective devices. Therefore, in this example, the 10 AWG conductors are only being protected by the 100A MCCB. **The 100A MCCB is too large to adequately protect the small 10 AWG conductors per the NEC.** The supplemental protectors must be replaced by appropriately sized UL489 listed circuit breakers.

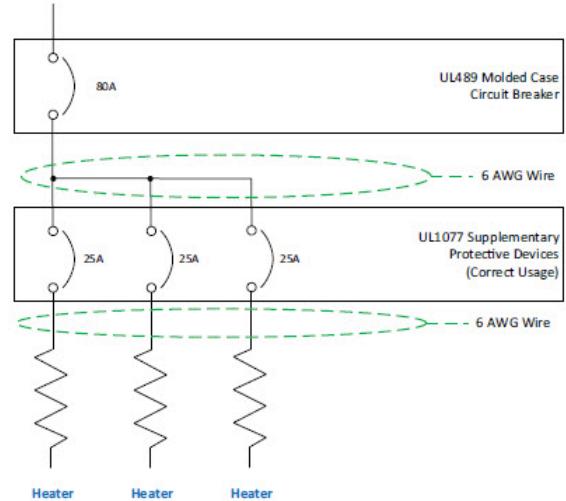

### Correct usage of supplemental protection

In this circuit, a UL489 molded case circuit breaker (MCCB) is again correctly used as the main breaker for the three heater loads being protected.

Each individual heater is protected by a UL1077 supplemental device. It is essential the wire feeding each individual heater is adequately protected by the UL489 breaker, and in **this case the wire size has not been decreased but remains 6 AWG throughout the circuit.** Since heaters may appropriately be connected in parallel, **the use of the supplemental devices is optional and therefore permitted.**

A failure of one heater may trip the associated supplemental device but not trip the upstream 80A breaker. This will allow the other two heaters to continue to function.

# Miniature circuit breakers

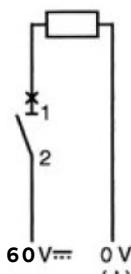

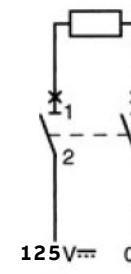

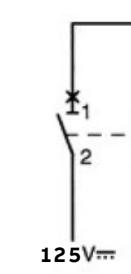

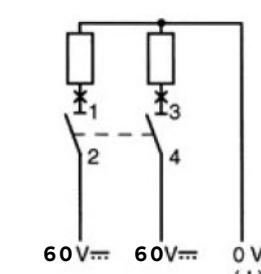

## Wiring in DC applications

### Use of S2T00M in direct current circuits (60 / 125 Vdc)

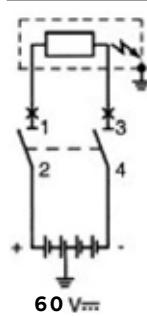

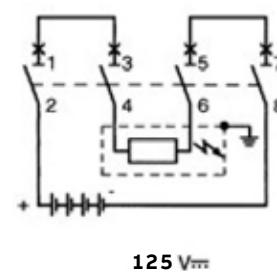

In DC systems up to 60 Vdc or, as the case may be, series connection up to 125 Vdc, customary ST200M series MCBS can be used. Polarity does not need to be taken into consideration, the outgoing circuit may be implemented from above or below the device.

For higher direct voltage up to 500 Vdc, devices of the S200MUC series must be used.

### Example of permissible voltages between the conductors depending on the number of poles and type of connection

Voltage between conductors	60 Vdc	125 Vdc	125 Vdc	60 Vdc
	1 pole	2 pole	2 pole	2 pole
Supply from top or bottom				
	60 V... 0 V (+)	125 V... 0 V	125 V... 0 V (+)	60 V... 60 V... 0 V (+)

### Example for different voltages between a conductor and earth where voltages between conductors are identical

Maximum voltage allowed	60 Vdc	125 Vdc
	2 pole	4 pole
		
	60 V... 0 V -	125 V...

# Miniature circuit breakers

## Wiring in DC applications

### Use of S200MUC in direct current circuits (250 / 500 Vdc)

S200MUC miniature circuit breakers can be used in the 1 pole version at 250 VDC, and in the 2-pole or 4-pole version with series connection of two poles up to 500 VDC. S200MUC differs from the standard S200 type. It is equipped with permanent magnets that assist in the forced extinguishing of the arc.

If voltages to ground exceeding 250 VDC occur, 2-pole S200MUC should be used for one-pole disconnection and four-pole S200MUC for all-pole disconnection

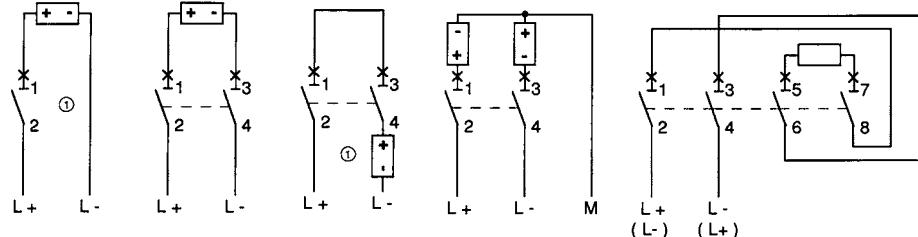

### For DC incoming supply from top / above

S200MUC MCBs have permanent magnets in the area of arc chutes. Therefore, it is necessary to take into account the polarity during the installation process. In the case of a short circuit, the magnetic field of the permanent magnets corresponds with the electromagnetic field of the short-circuit current, therefore, safely leading the short circuit into the arc chute. Incorrect polarities may cause damage to the MCB. As a result for top-fed devices, terminal 1 must be connected to (-) and terminal 3 to (+).

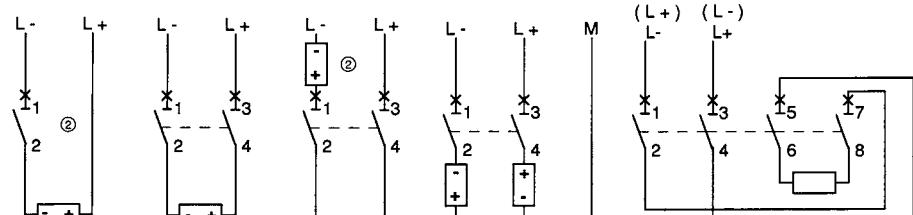

### Example of permissible voltages between the conductors depending on the number of poles and circuit layout

Voltage between conductors	250 Vdc	500 Vdc	500 Vdc	500 Vdc	500 Vdc
Voltage between conductor and earth	250 Vdc	250 Vdc	500 Vdc	250 Vdc	250 Vdc
S201MUC	S202MUC	S202MUC	S202MUC	S204MUC	

### Supply from bottom / below

### Supply from top / above

(1) In the circuit diagram, the negative pole is earthed

(2) In the circuit diagram, the positive pole is earthed

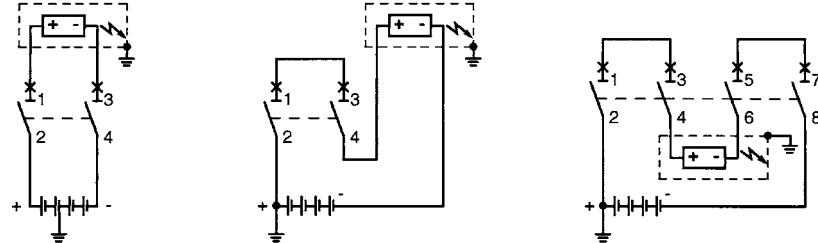

# Miniature circuit breakers

## Wiring in DC applications

Example of permissible voltages between the conductors depending on the number of poles and circuit layout for S200MUC

Voltage between conductors	500 Vdc All-pole disconnection	500 Vdc 1-pole disconnection	500 Vdc All-pole disconnection
Voltage between conductor and earth	250 Vdc Symmetrically grounded	250 Vdc Unsymmetrically grounded	250 Vdc Unsymmetrically grounded
	S202MUC	S202MUC	S204MUC

Supply from bottom / Below

(2) In the circuit diagram, the positive pole is earthed

# Miniature circuit breakers

## Wiring in DC applications

### Use of S200UDC in direct current circuits (60 / 125 Vdc) according to UL489 / CSA C22.2 No.5

S200UDC MCBs can be used in the one-pole version as 60 Vdc, and in the 2-pole version with series connection of two poles up to 125 Vdc.

S200UDC contains fitted permanent magnets, which assists in the forced extinguishing of the arc. If voltages to earth exceeding 60 Vdc may occur, 2-pole S200UDC is to be used for one-pole disconnection.

For DC incoming supply from above S200UDC... MCBs have, in the area of arc chutes, permanent magnets, it is therefore necessary to take into account the polarity during the installation process.

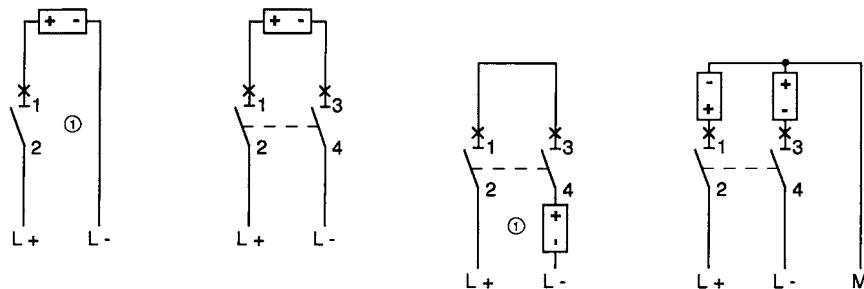

Doing so ensures that in the case of a short circuit the magnetic field of the permanent magnets corresponds with the electromagnetic field of the short-circuit current, therefore safely leading the short circuit into the arc chute.

Incorrect polarities may cause damage to the MCB. This is why – in the case of top-fed devices – terminal 1 must be connected to (-) and terminal 3 to (+).

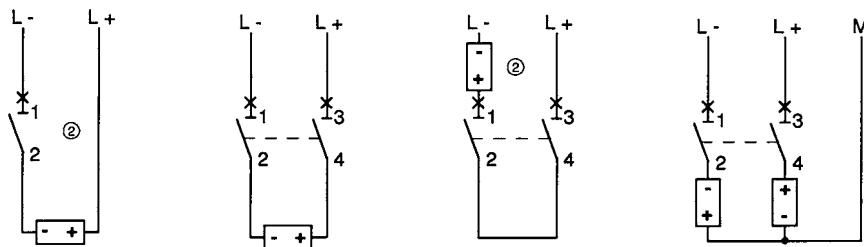

#### Example of permissible voltages between the conductors depending on the number of poles and circuit layout

Voltage between conductors	60 Vdc	125 Vdc	125 Vdc	125 Vdc
Voltage between conductor and earth	60 Vdc	60 Vdc	125 Vdc	60 Vdc
	1 pole - S201UDC	2 pole - S202UDC	2 pole - S202UDC	2 pole - S202UDC

Supply from bottom / below

Supply from top / above

# SU200M series

## UL489 Branch Circuit Protection

The miniature circuit breaker SU200M is ABB's solution for UL 489 branch circuit protection up to 480 Y/277 V AC and 96 V DC.

This circuit breaker is an all-round device for AC and DC applications for universal use in North American

Moreover, SU200M is fully compatible with System pro M compact® UL 489 accessories.

General Data	SU200M
Amperage	0.2 up to 63 A
Voltage	480Y/277 V AC 48/96 V DC (1/2-pole)
Poles	1, 2, 3, 4
Trip curves	C, K, Z
Short circuit interrupt rating	10 kA
Auxiliary contacts	Yes
Ambient temperature	-25 ... +55 °C
Mechanical life	20,000 operations
Bell alarm	Yes
Shunt trip	Yes
Undervoltage release	Yes
Busbar	Yes

### Features

- UL current limiting
- Fast breaking time (2.3–2.5 ms)
- Bus connection system
- Wide range of accessories
- Available with variable depth handle mechanism
- CE certified and marked
- DIN rail mounting
- Finger-safe terminals
- Multi-function terminals
- Suitable for reverse feed
- CSA C22.2 No.5 certified
- UL 489 listed branch circuit protective device
- UL File #E212323

# SU200MR series

## UL489 Branch Circuit Protection

The SU200MR is a high-performance circuit breaker with ring cable lug connections compliant with UL, CSA and IEC standards.

The integrated captive connecting screws simplify the connection of electric lines with extra protection and time saving.

As part of the proven product range System proM compact®, SU200MR can be combined with most of the UL 489 and CSA 22.2 No. 5 approved components.

General Data	SU200MR
Amperage	0.2 up to 63 A
Voltage	480Y/277 V AC
Poles	1, 2, 3, 4
Trip curves	K
Short circuit interrupt rating	10 kA
Auxiliary contacts	Yes
Ambient temperature	-25 ... +55 °C
Mechanical life	20,000 operations
Bell alarm	Yes
Shunt trip	Yes
Undervoltage release	Yes
Busbar	Yes

### Features

- UL current limiting
- Fast breaking time (2.3–2.5 ms)
- Bus connection system
- Wide range of accessories
- Available with variable depth handle mechanism
- CE certified and marked
- DIN rail mounting
- Ring terminals
- Finger-safe terminals
- Multi-function terminals
- Suitable for reverse feed
- CSA C22.2 No.5 certified
- UL 489 listed branch circuit protective device
- UL File #E212323

## S200UDC series

### UL489 Branch Circuit Protection (DC)

The S200UDC Miniature circuit breaker was designed for DC system in UL489 accordance for 60Vdc and 125Vdc

As part of the proven product range System proM compact®, S200UDC can be combined with most of the UL 489 and CSA 22.2 No. 5 approved components.

General Data	S200UDC
Amperage	1A up to 63 A
Voltage	60 / 125 Vdc
Poles	1, 2
Trip curves	K, Z
Short circuit interrupt rating	14 kA
Auxiliary contacts	Yes
Ambient temperature	-25 ... +55 °C
Mechanical life	20,000 operations
Bell alarm	Yes
Shunt trip	Yes
Undervoltage release	Yes
Busbar	Yes

#### Features

- UL current limiting
- Fast breaking time (2.3–2.5 ms)
- Bus connection system
- Wide range of accessories
- Available with variable depth handle mechanism

# Accessories

## Electrical accessories

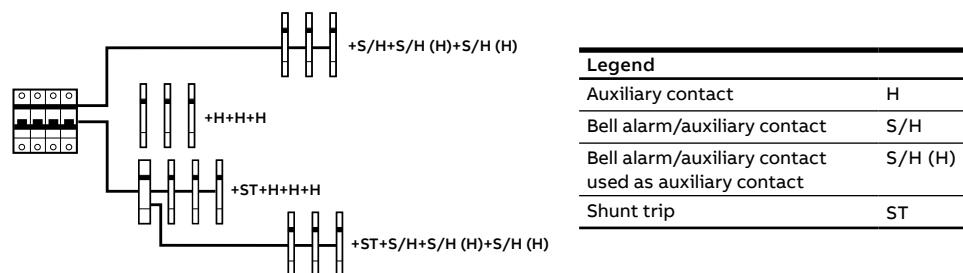

### Auxiliary contacts and bell alarms

Description	Part number
 <p><b>Auxiliary contact (1 form C)</b> The auxiliary contacts will signal whether the breaker is in the ON or OFF position. Mounts on the right side of the breaker up to maximum of 3 sets</p>	S2C-H6RU
 <p><b>Bell alarm contact (1 form C)</b> The bell alarm includes a set of contacts that will only signal when the breaker has tripped. It also includes a test button for testing the alarm contacts without opening the breaker. Mounts on the right side of the breaker up to a maximum of 3 sets</p>	S2C-S6RU

### Shunt trip

Description	Part number
 <p><b>12...60 Vac/dc Shunt trip</b> For remote tripping of the breaker, a shunt trip device can be added onto the MCB. The solenoid device opens the breaker after a control voltage is applied. Mounts on the right side of the MCB and can be mixed with auxiliary contacts</p>	S2C-A1U
 <p><b>110...415 Vac (110...250 Vdc) Shunt trip</b> For remote tripping of the breaker, a shunt trip device can be added onto the MCB. The solenoid device opens the breaker after a control voltage is applied. Mounts on the right side of the MCB and can be mixed with auxiliary contacts</p>	S2C-A2U

## Mechanical accessories

### Rotary handle mechanism

Description	Part number
 External handle rotary drive. For the actuation of 2, 3 or 4 pole miniature circuit breakers. To be used with 5 or 6 mm <sup>2</sup> shafts	S2C-DH

### External handles

Description	Color	With defeater	Part number
 Type 3R/12 selector handle, padlockable with maximum 3 padlocks (bail diameter 5..8mm) with door interlock in ON position. Available with defeating option to allow the MCB to stay in ON state when opening the door.	Black	Yes	OHBS2AJ
	Black	No	OHBS2AJ1
Yellow-Red	Yes		OHYS2AJ
	No		OHYS2AJ1
Silver	Yes		OHSS2AJ
	No		OHSS2AJ1
Grey	Yes		OHGS2AJ
	No		OHGS2AJ1

### Shafts

Description	Length	Part number
 Shaft extensions to be used with selector type handles. Shafts are cuttable. 6 mm <sup>2</sup> diameter	85 mm	OXS6X85
	105 mm	OXS6X105
	120 mm	OXS6X120
	130 mm	OXS6X130
	160 mm	OXS6X160
	180 mm	OXS6X180
	250 mm	OXS6X250
	330 mm	OXS6X330

# Tripping curves details

## C tripping curve

### Description

The "C" time-current curve is designed for medium magnetic start-up currents. Instantaneous tripping occurs between 5 and 10 times rated current in 50/60 Hz systems.

Standard	Thermal release (1)		Magnetic release (2)		
	Value	Tripping time	Range of instantaneous trip	Tripping time	
UL489	Conventional non-tripping current $I_1$	$1.03 \times I_n$	$> 1 \text{ hr}$	$5 \times I_n$	$> 0.2 \text{ s}$
	Conventional tripping current $I_2$	$1.25 \times I_n$	$< 1 \text{ hr}$ (3)	$10 \times I_n$	$< 0.2 \text{ s}$

(1) The thermal releases are calibrated to a nominal reference ambient temperature e.g. for UL489 of  $40^\circ\text{C}$ . In the case of higher ambient temperature, the current values fall by approx. 4% for each  $10^\circ\text{C}$  temperature rise.

(2) The indicated tripping value of electromagnetic tripping devices apply to a frequency of 50/60Hz. The thermal release operated independent of frequency.

(3) As from operating temperature (after  $I_1 > 1 \text{ hr}$ )

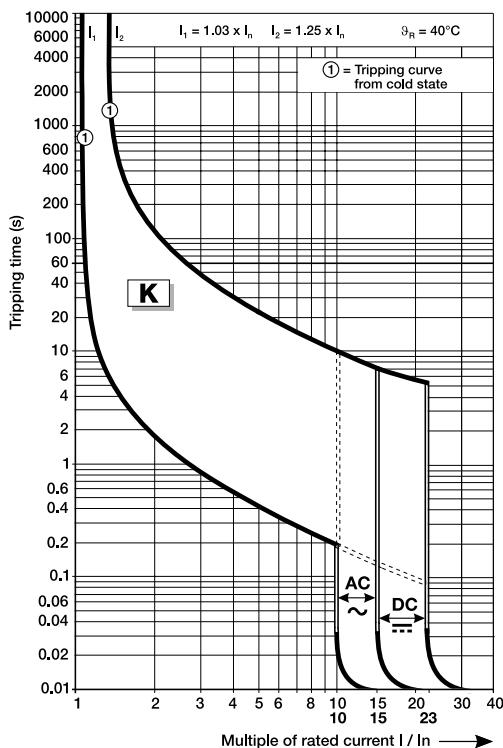

# Tripping curves details

## K tripping curve

### Description

The "K" time-current characteristic considers high magnetic start-up currents from motors, transformers and other equipment. Instantaneous tripping occurs between 8 and 12 times rated current in 50/60Hz systems. The "K" characteristic is available up through 63 amperes.

The "K" curve offers the best protection for the broadest range of electrical systems. The higher magnetic trip settings maximizes protection while allowing for higher in-rush currents during system start-up.

Standard	Thermal release <sup>(1)</sup>		Magnetic release <sup>(2)</sup>		
	Value	Tripping time	Range of instantaneous trip	Tripping time	
UL489	Conventional non-tripping current I1	$1.03 \times In$	> 1 hr	$10 \times In$	> 0.2 s
	Conventional tripping current I2	$1.25 \times In$	< 1 hr <sup>(3)</sup>	$14 \times In$	< 0.2 s

<sup>(1)</sup> The thermal releases are calibrated to a nominal reference ambient temperature e.g. for UL489 of 40°C. In the case of higher ambient temperature, the current values fall by approx. 4% for each 10 K temperature rise.

<sup>(2)</sup> The indicated tripping value of electromagnetic tripping devices apply to a frequency of 50/60Hz. The thermal release operated independent of frequency.

<sup>(3)</sup> As from operating temperature (after  $I1 > 1$  hr)

# Tripping curves details

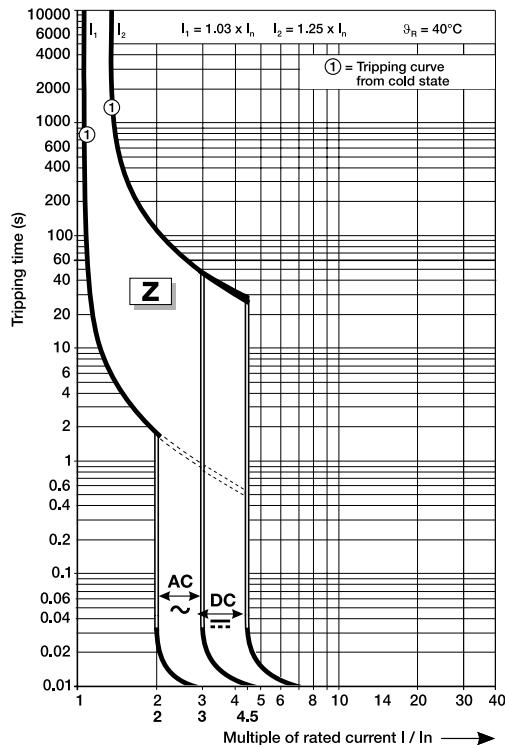

## Z tripping curve

—

### Description

The "Z" characteristic offers instantaneous tripping between 2 and 3 times rated current in 50/60Hz systems.

Many applications require a very low short circuit trip settings in order to protect semiconductor or other sensitive devices and the "Z" trip characteristic may provide maximum protection and service in these applications.

Standard	Thermal release <sup>(1)</sup>		Magnetic release <sup>(2)</sup>		
	Value	Tripping time	Range of instantaneous trip	Tripping time	
UL489	Conventional non-tripping current $I_1$	$1.03 \times I_n$	$> 1 \text{ hr}$	$2 \times I_n$	$> 0.2 \text{ s}$
	Conventional tripping current $I_2$	$1.25 \times I_n$	$< 1 \text{ hr}$ <sup>(3)</sup>	$3 \times I_n$	$< 0.2 \text{ s}$

<sup>(1)</sup> The thermal releases are calibrated to a nominal reference ambient temperature e.g. for UL489 of 40°C. In the case of higher ambient temperature, the current values fall by approx. 4% for each 10 K temperature rise.

<sup>(2)</sup> The indicated tripping value of electromagnetic tripping devices apply to a frequency of 50/60Hz. The thermal release operated independent of frequency.

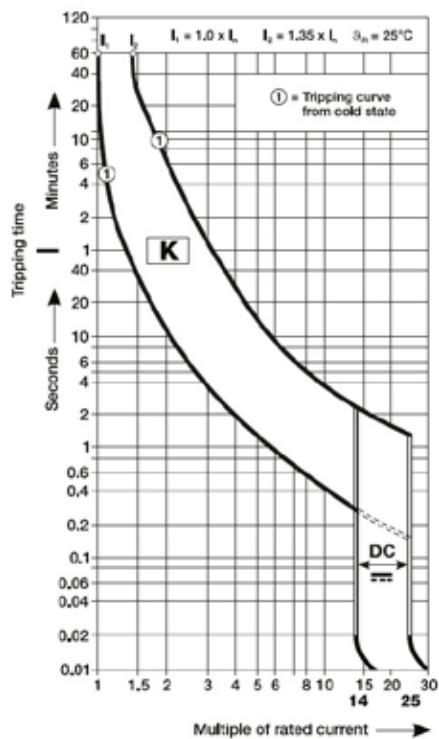

<sup>(3)</sup> As from operating temperature (after  $I_1 > 1 \text{ hr}$ )

# Tripping curves details

## K tripping curve (S200UDC)

### Description

The "K" time-current characteristic for S200UDC was specifically designed to offer instantaneous tripping between 14 and 25 times rated current in DC systems.

Standard	Thermal release <sup>(1)</sup>		Magnetic release		
	Value	Tripping time	Range of instantaneous trip	Tripping time	
UL489	Conventional non-tripping current I <sub>1</sub>	1.0 x I <sub>n</sub>	> 1 hr	14 x I <sub>n</sub>	> 0.2 s
	Conventional tripping current I <sub>2</sub>	1.35 x I <sub>n</sub>	< 1 hr <sup>(3)</sup>	25 x I <sub>n</sub>	< 0.2 s

(1) The thermal releases are calibrated to a nominal reference ambient temperature e.g. for UL489 of 40°C. In the case of higher ambient temperature, the current values fall by approx. 4% for each 10 K temperature rise.

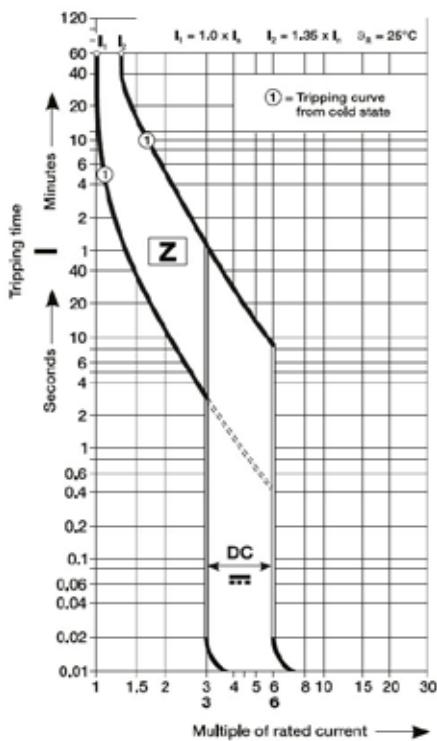

(3) As from operating temperature (after I<sub>1</sub> > 1 hr)

# Tripping curves details

## Z tripping curve (S200UDC)

### Description

The "Z" time-current characteristic for S200UDC was specifically designed to offer fast instantaneous tripping between 3 and 6 times rated current in DC systems.

Standard	Thermal release ①		Magnetic release		
	Value	Tripping time	Range of instantaneous trip	Tripping time	
UL489	Conventional non-tripping current $I_1$	$1.00 \times I_n$	$> 1 \text{ hr}$	$3 \times I_n$	$> 2 \text{ s}$
	Conventional tripping current $I_2$	$1.35 \times I_n$	$< 1 \text{ hr}$ ③	$6 \times I_n$	$< 2 \text{ s}$

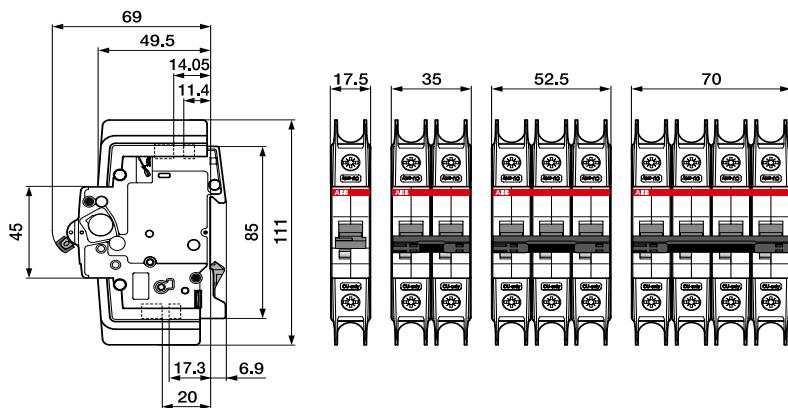

① The thermal releases are calibrated to a nominal reference ambient temperature e.g. for UL489 of  $40^\circ\text{C}$ . In the case of higher ambient temperature, the current values fall by approx. 4% for each  $10^\circ\text{C}$  temperature rise.

③ As from operating temperature (after  $I_1 > 1 \text{ hr}$ )

## UL489 Branch Circuit Protection

The S800U high performance MCB offers a compact solution to circuit protection.

The S800U devices are DIN rail mounted and available with application-specific trip characteristics to provide maximum circuit protection.

Designed specifically for 240Vac system requiring a high interrupting capability.

General Data	S800U
Amperage	10A up to 100 A
Voltage	240 V AC
Poles	1, 2, 3, 4
Trip curves	K, Z
Short circuit interrupt rating	30 (1p) / 50 kA (2,3,4p)
Auxiliary contacts	Yes
Ambient temperature	-25 ... +55 °C
Mechanical life	4,000 operations
Bell alarm	Yes
Shunt trip	Yes
Undervoltage release	Yes
TERminals	Interchangeable (RT / cage)

### Features

- Energy limiting
- Fast breaking time (2.3–2.5 ms)
- Wide range of accessories
- DIN rail mounting
- Finger-safe terminals
- Multi-function terminals
- Ring tongue compatible
- CSA C22.2 No 5 certified
- UL 489 File #E312425

## UL489 Branch Circuit Protection

The S804U-UCZ high performance MCB offers a compact solution to circuit protection in 600Vdc systems

It is available as 4-pole version with a short-circuit current rating of 10 kA according to UL 489.

General Data	S800U
Amperage	10A up to 80 A
Voltage	600 Vdc
Poles	4p in series
Trip curves	Z
Short circuit interrupt rating	10 kA
Auxiliary contacts	-
Ambient temperature	-25 ... +60 °C
Bell alarm	-
Shunt trip	-
Undervoltage release	-
TERminals	Cage (compression)

### Features

- Energy limiting
- Fast breaking time (2.3–2.5 ms)
- Wide range of accessories
- DIN rail mounting
- Finger-safe terminals
- Multi-function terminals
- CSA C22.2 No 5 certified
- UL 489 File #E312425

# S804U-PVS5 series

## UL489B Branch Circuit Protection

The S804U-PVS5 is for GFDI application (GroundFault Detector Interrupter) in photovoltaic systems.

In case of a ground fault, the breaker will trip. Thus the PV generator will not be damaged. The breaker is tested acc. to UL489B for 1000 V d.c.

General Data	S804U-PVS
Amperage	5 A
Voltage	1000 Vdc
Poles	4p in series
Trip curves	PVS
Short circuit interrupt rating	3 kA
Auxiliary contacts	-
Ambient temperature	-25 ... +55 °C
Bell alarm	-
Shunt trip	-
Undervoltage release	-
TERminals	Cage (compression)

### Features

# Accessories

## Electrical accessories

### Auxiliary contacts and bell alarms

Description	Part number
 <p><b>Auxiliary contact (2 form C)</b> The auxiliary contacts will signal whether the breaker is in the ON or OFF position. Mounts on the left side of the breaker up to maximum of 2 sets</p>	S800-AUX
 <p><b>Combined auxiliary contact + bell alarm (2 form C)</b> The S800-AUX/ALT combined auxiliary and signal contact is used for electrical signaling of the operating state of the high performance MCB. One signal for the on/off/ state, one signal for tripped state only. Mounts on the left side of the breaker up to maximum of 2 sets.</p>	S800-AUX/ALT

### Shunt trip

Description	Part number
 <p><b>24 Vac/dc Shunt trip</b> For remote tripping of the breaker, a shunt trip device can be added onto the MCB. The solenoid device opens the breaker after a control voltage is applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts</p>	S800-SOR24
<p><b>48...130 Vac/dc Shunt trip</b> For remote tripping of the breaker, a shunt trip device can be added onto the MCB. The solenoid device opens the breaker after a control voltage is applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts</p>	S800-SOR130
<p><b>110...250 Vdc Shunt trip</b> For remote tripping of the breaker, a shunt trip device can be added onto the MCB. The solenoid device opens the breaker after a control voltage is applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts</p>	S800-SOR250

# Accessories

## Electrical accessories

### Undervoltage release

Description	Part number
<b>24...36 Vac/dc undervoltage release</b>  For remote tripping of the breaker, when the voltage drops below approximately 50% of rated voltage. The breaker can't be operated unless proper voltage is first applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts	S800-UVR36
<b>48...60 Vac/dc undervoltage release</b>  For remote tripping of the breaker, when the voltage drops below approximately 50% of rated voltage. The breaker can't be operated unless proper voltage is first applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts	S800-UVR60
<b>110...130 Vac/dc undervoltage release</b>  For remote tripping of the breaker, when the voltage drops below approximately 50% of rated voltage. The breaker can't be operated unless proper voltage is first applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts	S800-UVR130
<b>220...250 Vdc undervoltage release</b>  For remote tripping of the breaker, when the voltage drops below approximately 50% of rated voltage. The breaker can't be operated unless proper voltage is first applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts	S800-UVR250

### Remote switching unit and cable

Description	Part number
<b>Remote switching unit (breaker not included)</b>  The RSU will allow a remote operation of the circuit breaker when 24Vdc is applied	S800W-RSU
<b>Connecting cable and plug (mandatory with RSU)</b>  Used with the RSU to provide power and control. 3 meter cable 0.5 mm <sup>2</sup> (#20 AWG) including 10-pole Micro-Fit 3.0™ plug.	S800-RSU-CP

# Accessories

## Mechanical accessories

### Ring tongue adaptor

Description	Part number
 Ring terminal cable connection 40...125 A (kit of 2 nuts, insulation nuts, cable lugs, allen screws and 25mm insulation walls)	S800-RT2125

### Handle operating mechanism

Description	Part number
 Mounts on the circuit breaker and allows "through the door" operation	S800-RD

### Rotary handle

Description	Part number
 Grey rotary handle	S800-RHE-H
 Red emergency rotary handle	S800-RHE-EM

### Shaft extension

Description	Part number
 To connect rotary drive and door handle	S800-RHE-S

# Accessories

## Mechanical accessories

### UL locking device

Description	Part number
 Lock out / tag out device for S800 series (padlock not included)	S800U-PLL

## Electrical accessories

### Technical specifications S800W-RSU

	S800-SOR250
Operating voltage	24 Vdc
Current consumption	2.5 A
Standby current	< 50 mA
Switching time (OFF-ON)	< 500 ms
Switching time (ON-OFF)	< 250 ms
Ambient operating temperature	-25°C...+70°C
Mechanical life	10,000 operations
Maximum cable length	10 M
Protection degree	IP20
Weight	0.661387 lbs (300 g)
Type of protection	
Connection	1-pole Micro-Fit™ 3.0

### General details for S800W-RSU

#### Features:

- The remote switching unit S800W-RSU has a brushless, high precision DC motor to ensure fast remote control operations
- Low power consumption
- Short switching times
- The S800W-RSU is mounted on any multi-pole S800 high-performance MCB
- Installation and wiring can be field installable
- The connection is done by a 10-pole Micro-Fit 3.0™ (not included in delivery)
- The S800W-RSU can be operated by a standard pushbutton or drive by a PLC

#### Switching times:

- OFF > ON  
< 500 ms from signal to contact closing
- ON > OFF  
< 250 ms from signal to contact opening
- TRIP > OFF > ON  
< 1500 ms from signal to contact closing

#### Safety intelligence

- Inputs are deactivated when detecting manual use
- All outputs become active when spindle is rotated more than 360 degrees
- S800W-RSU is locked for five minutes after three switching attempts leading to a trip
- Manual switch off possible for 3 and 4 pole devices

# Tripping curves details

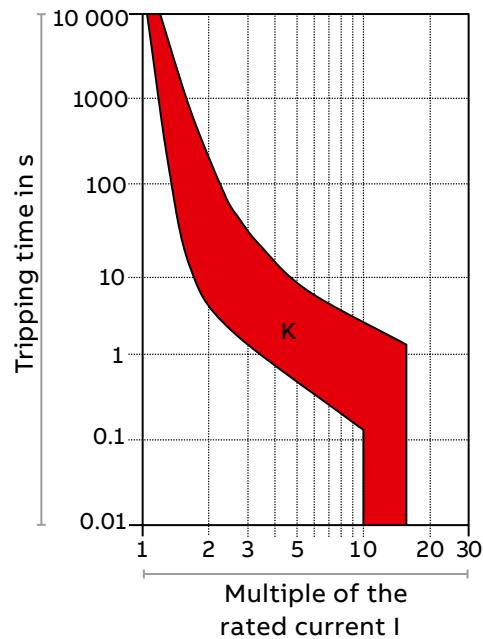

## K tripping curve

—

### Description

The "K" characteristic offers instantaneous tripping at 13 times rated current in 50/60Hz systems.

Used in case of high magnetic inrush currents that can occur, e.g. in engines or transformers. This characteristic provides the best protection for a wide range of electrical systems by allowing high inrush currents when starting up the system.

Standard	Currents	Thermal release		Magnetic release
		Small test current	Large test current	Range of instantaneous trip
UL489	10...100 A	$1.00 \times I_n$	$1.35 \times I_n$	$13 \times I_n \pm 20\%$

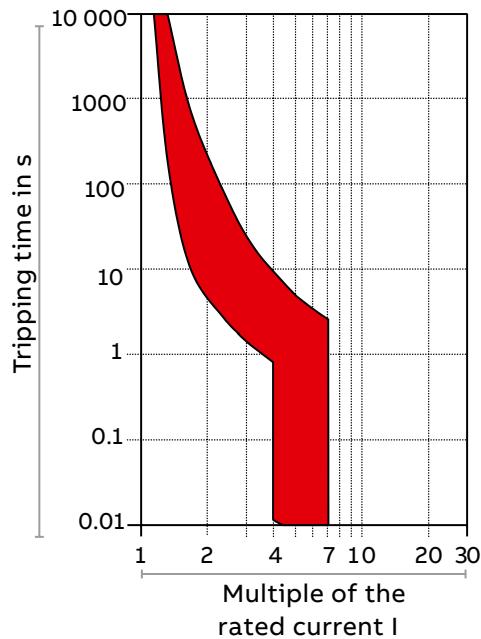

# Tripping curves details

## Z tripping curve

### Description

The "Z" characteristic offers instantaneous tripping at 4 times rated current in 50/60Hz systems.

Used as Ground-Fault Detector Interrupter (GFDI) in photo-voltaic systems.

Standard	Currents	Thermal release		Magnetic release
		Small test current	Large test current	Range of instantaneous trip
UL489	10...100 A	$1.00 \times I_n$	$1.35 \times I_n$	$4 \times I_n \pm 20\%$

# Tripping curves details

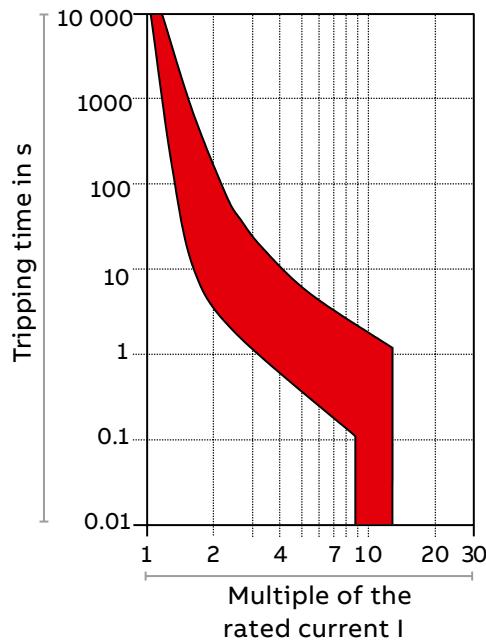

## UCZ tripping curve

—

### Description

The "UCZ" characteristic offers instantaneous tripping at 11 times rated current in DC systems.

Used in case of circuit breaker in 600 Vdc networks, especially in datacenters.

Standard	Currents	Thermal release		Magnetic release
		Small test current	Large test current	Range of instantaneous trip
UL489	10...80 A	$1.00 \times I_n$	$1.35 \times I_n$	$11 \times I_n \pm 20\% \text{ (DC)}$

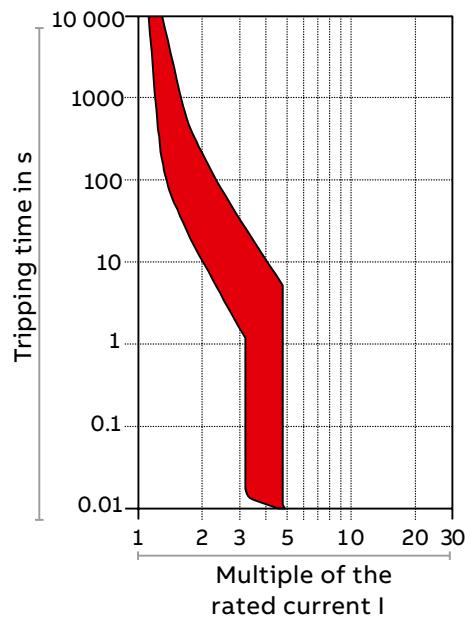

# Tripping curves details

## PVS tripping curve

### Description

The "PVS" characteristic offers instantaneous tripping at 6 times rated current in DC systems.

Used in case of circuit breaker protecting electric circuits feeding consumers that do not generate any current peaks, or only mild ones.

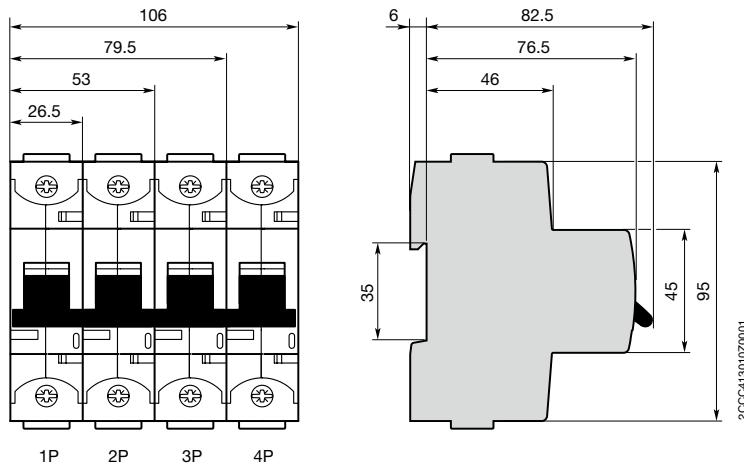

Standard	Currents	Thermal release		Magnetic release
		Small test current	Large test current	Range of instantaneous trip
UL489	5 A	$1.13 \times I_n$	$1.30 \times I_n$	$6 \times I_n$ (DC)

# ST200M series

## UL 1077 Supplementary Protectors

The ST 200 M miniature circuit breaker provides supplementary protection acc. to CSA C22.2 No. 235 and UL 1077 up to 480 Y/277 V AC and 125 V DC.

With a broad range of options and approvals acc. to the international standards UL, CSA and IEC, the ST 200 M is ideal for multiple applications and markets.

It is also fully compatible with System pro M compact® accessories.

General Data	ST200M
Amperage	0.5 up to 63 A
Voltage	480Y/277 V AC 60/125 V DC (1/2-pole)
Poles	1, 1+N, 2, 3, 3+N, 4
Trip curves	B, C, D, K, Z
Short circuit interrupt rating	10 kA (up to 32 A) 5kA (32...63 A)
Auxiliary contacts	Yes
Ambient temperature	-25 ... +55 °C
Mechanical life	20,000 operations
Bell alarm	Yes
Shunt trip	Yes
Undervoltage release	Yes
Busbar	Yes

### Features

- High performance MCB with interrupt rating up to 10 kA
- DIN rail mounting
- CE certified and marked
- CSA 22.2 No. 235 and UL1077 (UL file #E76126) certified
- Energy limiting
- Fast breaking time (2.3 to 2.5 ms)
- Wide range of accessories
- Finger-safe terminals
- Suitable for reverse feed
- High calibration temperature of 40 °C for reduced derating in ICP applications
- Laser printing provides clear product information on device
- Clear contact position indication in red/green ("real CPI")
- Unique, patented twin terminal for wiring up to 35 mm<sup>2</sup> with captive screws
- Field wiring available for most types
- Bus connection system
- Robust thermoplastic housing material for better protection against external influences

## Notes

# S200MR series

## UL 1077 Supplementary Protectors

The S200MR is a high-performance supplementary protector with ring cable lug connections conforming to UL, CSA, and IEC standards.

The integrated captive connecting screws simplify the connection of electric lines, providing extra protection and time saving.

The S200MR is also fully compatible with System pro M compact® accessories.

General Data	S200MR
Amperage	0.2 up to 63 A
Voltage	480Y/277 V AC
Poles	1, 2, 3, 4
Trip curves	K
Short circuit interrupt rating	10 kA
Auxiliary contacts	Yes
Ambient temperature	-25 ... +55 °C
Mechanical life	20,000 operations
Bell alarm	Yes
Shunt trip	Yes
Undervoltage release	Yes
Busbar	Yes

### Features

- High performance MCB with interrupt rating up to 10 kA
- DIN rail mounting
- CE certified and marked
- CSA 22.2 No. 235 and UL1077 (UL file #E76126) certified
- Energy limiting
- Fast breaking time (2.3 to 2.5 ms)
- Wide range of accessories
- Finger-safe terminals
- Ring terminals
- Suitable for reverse feed
- High calibration temperature of 40 °C for reduced derating in ICP applications
- Laser printing provides clear product information on device
- Clear contact position indication in red/green ("real CPI")
- Unique, patented twin terminal for wiring up to 35 mm<sup>2</sup> with captive screws
- Field wiring available for most types
- Bus connection system
- Robust thermoplastic housing material for better protection against external influences

# S200MUC series

## UL 1077 Supplementary Protectors

The S200MUC extends the established ABB System pro M compact® product range with an MCB for DC and AC applications.

The S200MUC impresses with its extended DC performances up to 500Vdc.

Its high inbuilt short circuit breaking capacity across the entire model line, its flexible AC and DC application and its approval and compliance in accordance with all major international and local standards make it truly unique.

General Data	S200MUC
Amperage	0.2 up to 63 A
Voltage	480Y/277 V AC 250/500 V DC
Poles	1, 2, 3, 4
Trip curves	C, K, Z
Short circuit interrupt rating	10 kA
Auxiliary contacts	Yes
Ambient temperature	-25 ... +55 °C
Mechanical life	20,000 operations
Bell alarm	Yes
Shunt trip	Yes
Undervoltage release	Yes
Busbar	Yes

### Features

- High performance MCB with interrupt rating up to 10 kA
- DIN rail mounting
- CE certified and marked
- CSA 22.2 No. 235 and UL1077 (UL file #E76126) certified
- Energy limiting
- Fast breaking time (2.3 to 2.5 ms)
- Wide range of accessories
- Finger-safe terminals
- Suitable for reverse feed in AC only
- High calibration temperature of 40 °C for reduced derating in ICP applications
- Laser printing provides clear product information on device
- Clear contact position indication in red/green ("real CPI")
- Unique, patented twin terminal for wiring up to 35 mm<sup>2</sup> with captive screws
- Field wiring available for most types
- Bus connection system
- Robust thermoplastic housing material for better protection against external influences

### Auxiliary contacts and bell alarms

Description	Part number
<b>1 SPDT auxiliary contact (form C)</b>   The auxiliary contacts will signal whether the breaker is in the ON or OFF position. Mounts on the right side of the breaker up to maximum of 3 sets	S2C-H6R
<b>1 NO + 1 NC auxiliary contact</b>  The auxiliary contacts will signal whether the breaker is in the ON or OFF position. Mounts on the right side of the breaker up to maximum of 2 sets	S2C-H6-11R
<b>2 NO auxiliary contact</b>  The auxiliary contacts will signal whether the breaker is in the ON or OFF position. Mounts on the right side of the breaker up to maximum of 2 sets	S2C-H6-20R
<b>2 NC auxiliary contact (2 NC)</b>  The auxiliary contacts will signal whether the breaker is in the ON or OFF position. Mounts on the right side of the breaker up to maximum of 2 sets	S2C-H6-02R
<b>1 NC auxiliary micro contact (bottom fitting)</b>  	S2C-H01
<b>1 NO auxiliary micro contact (bottom fitting)</b>	S2C-H10
<b>Bell alarm contact (1 form C)</b>   The bell alarm includes a set of contacts that will only signal when the breaker has tripped. It also includes a test button for testing the alarm contacts without opening the breaker. Mounts on the right side of the breaker up to a maximum of 3 sets	S2C-S/H6R

### Possible mounting arrangements of auxiliary contacts

Legend	
Auxiliary contact S2C-H6R	H
Auxiliary contact S2C-H6-..R	H-R
Bell alarm/auxiliary contact S2C-S/H6R	S/H
Bell alarm/auxiliary contact used as auxiliary contact	S/H (H)

### Shunt trips and undervoltage release

Description	Part number
 <b>12...60 Vac/dc shunt trip</b> For remote tripping of breaker when control voltage is applied	S2C-A1
 <b>110...415 Vac (110...250 Vdc) shunt trip</b> For remote tripping of breaker when control voltage is applied	S2C-A2
<b>12 Vdc undervoltage release</b> Used to trip the breaker when voltage drops below approximately 50% of control voltage	S2C-UA12DC
<b>24 Vac or 24 Vdc undervoltage release</b> Used to trip the breaker when voltage drops below approximately 50% of control voltage	S2C-UA24AC S2C-UA24DC
<b>48 Vac or 48 Vdc undervoltage release</b> Used to trip the breaker when voltage drops below approximately 50% of control voltage	S2C-UA48AC S2C-UA48DC
<b>110 Vac or 110 Vdc undervoltage release</b> Used to trip the breaker when voltage drops below approximately 50% of control voltage	S2C-UA110AC S2C-UA110DC
<b>230 Vac or 230 Vdc undervoltage release</b> Used to trip the breaker when voltage drops below approximately 50% of control voltage	S2C-UA230AC S2C-UA230DC
<b>400 Vac undervoltage release</b> Used to trip the breaker when voltage drops below approximately 50% of control voltage	S2C-UA400AC

Possible mounting arrangements of shunt trips and undervoltage release.

Legend	
Auxiliary contact S2C-H6R	H
Auxiliary contact S2C-H6-.R	H-R
Bell alarm/auxiliary contact S2C-S/H6R	S/H
Bell alarm/auxiliary contact used as auxiliary contact	S/H (H)
Shunt trip S2C-A...	ST
Undervoltage release S2C-UA..	UR

<sup>(1)</sup> Maximum rating of busbar with end-feeding. For center-fed details, please consult technical detail section of the accessories.

### Accessories for busbars (cuttable)

Description	Part number
1 phase busbar end caps	PS-END0
2 and 3 phase busbar end caps	PS-ENDSP
4 phase busbar end caps	PS-END1SP
 Busbar pin cover (covers 5 unused pins)	BSKSP
 Insulated feeder terminal with pin contact (breaker mounting)	AST35/15SP
 Single pole feeder terminal (busbar mounting)	SZ-ESKSP

# Accessories

## Mechanical accessories

### Rotary handle mechanism

Description	Part number
 External handle rotary drive. For the actuation of 2, 3 or 4 pole miniature circuit breakers. To be used with 5 or 6 mm <sup>2</sup> shafts	S2C-DH

### External handles

Description	Color	With defeater	Part number
 Type 3R/12 selector handle, padlockable with maximum 3 padlocks (bail diameter 5..8mm) with door interlock in ON position. Available with defeating option to allow the MCB to stay in ON state when opening the door.	Black	Yes	OHBS2AJ
		No	OHBS2AJ1
	Yellow-Red	Yes	OHYS2AJ
		No	OHYS2AJ1
	Silver	Yes	OHSS2AJ
		No	OHSS2AJ1
	Grey	Yes	OHGS2AJ
		No	OHGS2AJ1

### Shafts

Description	Length	Part number
 Shaft extensions to be used with selector type handles. Shafts are cuttable. 6 mm <sup>2</sup> diameter	85 mm	OXS6X85
	105 mm	OXS6X105
	120 mm	OXS6X120
	130 mm	OXS6X130
	160 mm	OXS6X160
	180 mm	OXS6X180
	250 mm	OXS6X250
	330 mm	OXS6X330

# Accessories

## Mechanical accessories

### — Locking device and padlock

Description	Used with	Part number
 Locking device (3mm hasp)	S200 series	SA1
 Padlock with 2 keys	Locking device	SA2

### — Front mounting brackets

Description	Nbr of MCBs	Part number
 Front mounting brackets	1	MB-CL1
	2	MB-CL2
	3	MB-CL3
 Front mounting bracket	From 1 to 3	MB-3PD
 Front mounting bracket adjustable	From 1 to 10	S500-ME

# Tripping curves details

## B tripping curve

### Description

Available with the ST200M series only. The "B" time-current curve is designed primarily for use in cable protection applications. Instantaneous tripping occurs between approximately 3 to 5 times rated current in 50/60Hz systems. This quick trip curve maximizes protection of control circuits under low short circuit fault levels that could damage control wiring.

Standard	(A) Thermal release (1)		(B) Magnetic release (2)	
	Value	Tripping time	Range of instantaneous trip	Tripping time
IEC 60898-1	Conventional non-tripping current I1	1.13 x In	> 1 hr	3 x In
	Conventional tripping current I2	1.45 x In	< 1 hr	5 x In

(1) The thermal releases are calibrated to a nominal reference ambient temperature of 30°C. In the case of higher ambient temperature, the current values fall by approx. 10% for each 10 K temperature rise.

(2) The indicated tripping value of electromagnetic tripping devices apply to a frequency range from 16 2/3...60Hz. For different network frequencies or use in DC, the value changes according to the multiplier in the table below. The thermal tripping is independent from network frequency.

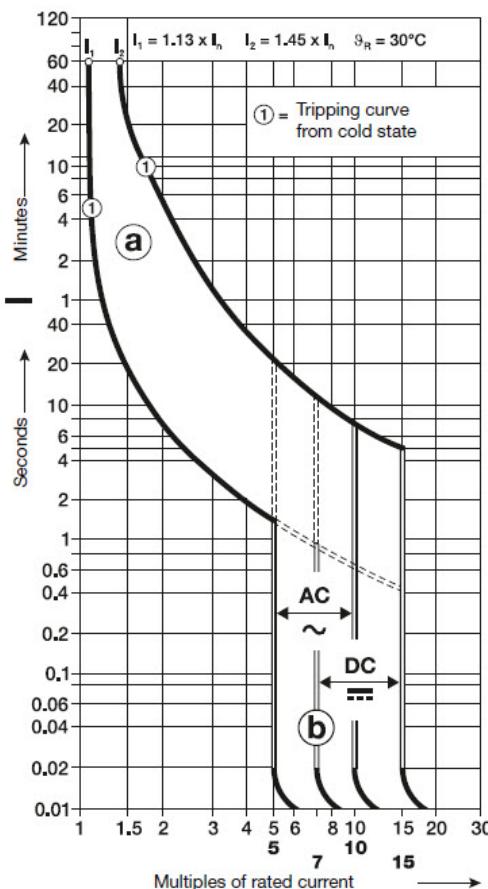

Network	Frequency	Trip range multiplier
AC	100 Hz	1.1
	200 Hz	1.2
	400 Hz	1.5
DC	-	1.5

# Tripping curves details

## C tripping curve

### Description

Available for all series with rated currents up through 63 amperes. The "C" time-current curve is designed for medium magnetic start-up currents. Instantaneous tripping occurs between 5 and 10 times rated current in 50/60 Hz systems. The "C" characteristic is the most commonly used curved.

Standard	(A) Thermal release <sup>(1)</sup>		(B) Magnetic release <sup>(2)</sup>		
	Value	Tripping time	Range of instantaneous trip	Tripping time	
IEC 60898-1	Conventional non-tripping current I1	$1.13 \times I_n$	> 1 hr	$5 \times I_n$	> 0.1 s
	Conventional tripping current I2	$1.45 \times I_n$	< 1 hr	$10 \times I_n$	< 0.1 s

<sup>(1)</sup> The thermal releases are calibrated to a nominal reference ambient temperature of 30°C. In the case of higher ambient temperature, the current values fall by approx. 10% for each 10 K temperature rise.

<sup>(2)</sup> The indicated tripping value of electromagnetic tripping devices apply to a frequency range from 16 2/3...60Hz. For different network frequencies or use in DC, the value changes according to the multiplier in the table below. The thermal tripping is independent from network frequency.

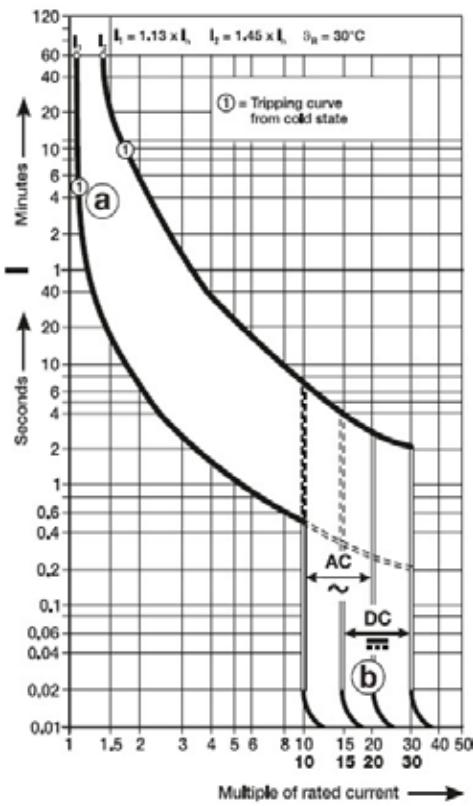

Network	Frequency	Trip range multiplier
AC	100 Hz	1.1
	200 Hz	1.2
	400 Hz	1.5
DC	-	1.5

# Tripping curves details

## D tripping curve

### Description

Available with the ST200M series only. The "D" time-current curve has an instantaneous trip point between 10 to 20 times the breaker rating. Thus, the "D" characteristic can be a good protective solution for applications involving high in-rush transformers, motors and other high inductive systems. The "D" characteristic is also suitable for any application where a high instantaneous trip point is desired.

Standard	(A) Thermal release <sup>(1)</sup>		(B) Magnetic release <sup>(2)</sup>		
	Value	Tripping time	Range of instantaneous trip	Tripping time	
IEC 60898-1	Conventional non-tripping current $I_1$	$1.13 \times I_n$	$> 1 \text{ hr}$	$10 \times I_n$	$> 0.1 \text{ s}$
	Conventional tripping current $I_2$	$1.45 \times I_n$	$< 1 \text{ hr}$	$20 \times I_n$	$< 0.1 \text{ s}$

<sup>(1)</sup> The thermal releases are calibrated to a nominal reference ambient temperature of  $30^\circ\text{C}$ . In the case of higher ambient temperature, the current values fall by approx. 10% for each  $10^\circ\text{C}$  temperature rise.

<sup>(2)</sup> The indicated tripping value of electromagnetic tripping devices apply to a frequency range from 16 2/3...60Hz. For different network frequencies or use in DC, the value changes according to the multiplier in the table below. The thermal tripping is independent from network frequency.

Network	Frequency	Trip range multiplier
AC	100 Hz	1.1
	200 Hz	1.2
	400 Hz	1.5
DC	-	1.5

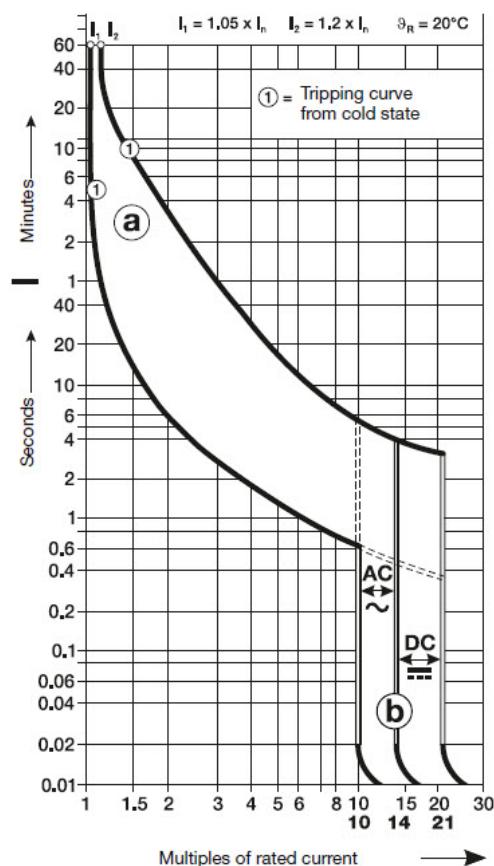

# Tripping curves details

## K tripping curve

### Description

Available for all series with rated currents up through 63 amperes. The "K" time-current characteristic considers high magnetic start-up currents from motors, transformers and other equipment. Instantaneous tripping occurs between 10 to 14 times rated current in 50/60Hz systems. The "K" characteristic is available up through 63 amperes.

The "K" curve offers the best protection for the broadest range of electrical systems. The higher magnetic trip settings maximizes protection while allowing for higher in-rush currents during system start-up.

Standard	(A) Thermal release <sup>(1)</sup>		(B) Magnetic release <sup>(2)</sup>		
	Value	Tripping time	Range of instantaneous trip	Tripping time	
IEC 60898-1	Conventional non-tripping current I1	$1.05 \times I_n$	$> 1 \text{ hr}$	$10 \times I_n$	$> 0.2 \text{ s}$
	Conventional tripping current I2	$1.20 \times I_n$ $1.50 \times I_n$	$< 1 \text{ hr}$ <sup>(3)</sup> $< 2 \text{ min}$ <sup>(3)</sup>	$14 \times I_n$	$< 0.2 \text{ s}$
		$6.00 \times I_n$	$> 2 \text{ s} (T_1)$		

<sup>(1)</sup> The thermal releases are calibrated to a nominal reference ambient temperature of 20°C. In the case of higher ambient temperature, the current values fall by approx. 10% for each 10 K temperature rise.

<sup>(2)</sup> The indicated tripping value of electromagnetic tripping devices apply to a frequency range from 16 2/3..60Hz. For different network frequencies or use in DC, the value changes according to the multiplier in the table below. The thermal tripping is independent from network frequency.

<sup>(3)</sup> As from operating temperature (after  $I_1 > 1 \text{ hr}$  or, as applicable, 2 h)

Network	Frequency	Trip range multiplier
AC	100 Hz	1.1
	200 Hz	1.2
	400 Hz	1.5
DC	-	1.5

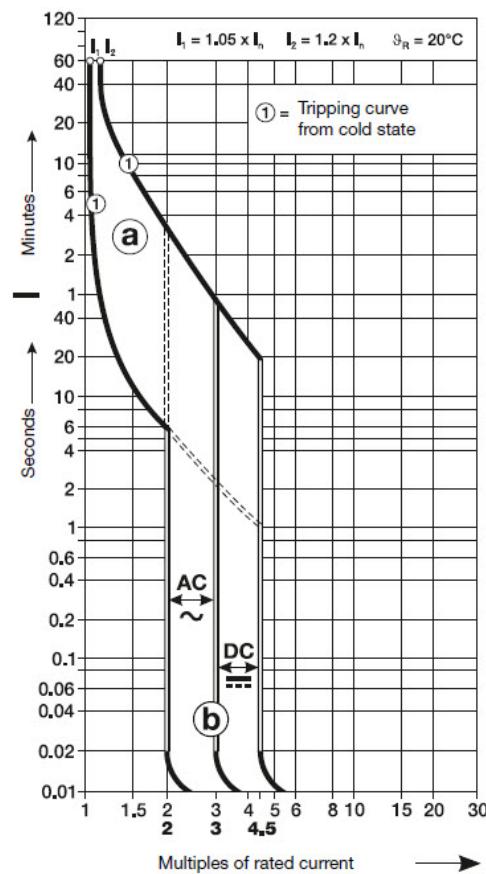

# Tripping curves details

## Z tripping curve

### Description

Available for ST200M and S200MUC series with rated currents up through 63 amperes. the "Z" characteristic offers instantaneous tripping between 2 and 3 times rated current in 50/60Hz systems.

Many applications require a very low short circuit trip settings in order to protect semiconductor or other sensitive devices and the "Z" trip characteristic may provide maximum protection and service in these applications.

Standard	(A) Thermal release <sup>(1)</sup>		(B) Magnetic release <sup>(2)</sup>		
	Value	Tripping time	Range of instantaneous trip	Tripping time	
IEC 60898-1	Conventional non-tripping current I <sub>1</sub>	1.05 x In	> 1 hr	2 x In	> 0.2 s
	Conventional tripping current I <sub>2</sub>	1.20 x In	< 1 hr <sup>(3)</sup>	3 x In	< 0.2 s

<sup>(1)</sup> The thermal releases are calibrated to a nominal reference ambient temperature of 20°C. In the case of higher ambient temperature, the current values fall by approx. 10% for each 10 K temperature rise.

<sup>(2)</sup> The indicated tripping value of electromagnetic tripping devices apply to a frequency range from 16 2/3...60Hz. For different network frequencies or use in DC, the value changes according to the multiplier in the table below. The thermal tripping is independent from network frequency.

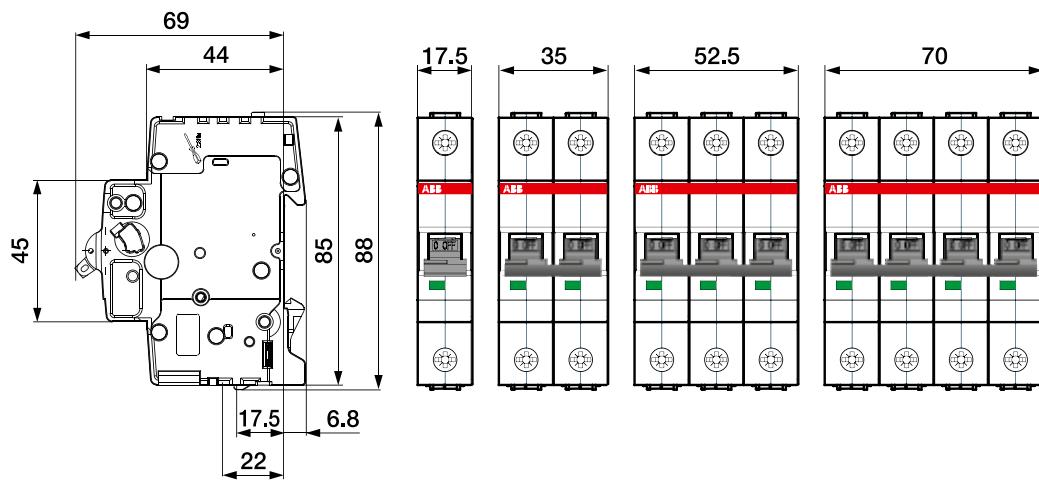

<sup>(3)</sup> As from operating temperature (after I<sub>1</sub> > 1 hr or, as applicable, 2 h)

Network	Frequency	Trip range multiplier
AC	100 Hz	1.1
	200 Hz	1.2
	400 Hz	1.5
DC	-	1.5

# S800 series

## UL 1077 Supplementary Protectors

The S800 series are high performance circuit breakers.

The current range covers nominal rated currents from 10 A up to 100 A (S800C) and 6 A up to 63 A (S800S) with a maximum rated short-circuit interrupt rating of up to 20 kA (S800C) and 30 kA (S800S) in UL / CSA applications.

The S800HV is available for 600Y/347 VAC requirements up to 32A with 15kA IC

General Data	S800C	S800S	S800HV
Amperage	10...100 A	10...63 A	10...32 A
Voltage	480Y/277 Vac 125/500 Vdc	600Y/347 Vac 125/500 Vdc	600Y/347 Vac 125/500 Vdc
Poles	1, 2, 3, 4	1, 2, 3, 4	3
Trip curves	B, C, D, K	B, C, D, K	C, K
Short circuit interrupt rating	10 kA	6 kA	15 kA
Mechanical life	4,000 ops	4,000 ops	4,000 ops
Ambient temperature	-25 ... +60 °C	-25 ... +60 °C	-25 ... +60 °C
Auxiliary contacts	Yes	Yes	Yes
Bell alarm	Yes	Yes	Yes
Shunt trip	Yes	Yes	Yes
Undervoltage release	Yes	Yes	Yes
Busbar	No	No	No

### Features

- Rated operational voltage up to 480Y/277 V AC – 500 V DC (S800C) and 600Y/347 V AC (S800S), respectively (UL)
- Compression terminals can be easily converted to ring tongue terminals
- Compact
- Space saving

# Accessories

## Electrical accessories

### Auxiliary contacts and bell alarms

Description	Part number
 <p><b>Auxiliary contact (2 form C)</b> The auxiliary contacts will signal whether the breaker is in the ON or OFF position. Mounts on the left side of the breaker up to maximum of 2 sets</p>	S800-AUX
 <p><b>Combined auxiliary contact + bell alarm (2 form C)</b> The S800-AUX/ALT combined auxiliary and signal contact is used for electrical signaling of the operating state of the high performance MCB. One signal for the on/off/ state, one signal for tripped state only. Mounts on the left side of the breaker up to maximum of 2 sets.</p>	S800-AUX/ALT

### Shunt trip

Description	Part number
 <p><b>24 Vac/dc Shunt trip</b> For remote tripping of the breaker, a shunt trip device can be added onto the MCB. The solenoid device opens the breaker after a control voltage is applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts</p>	S800-SOR24
<p><b>48...130 Vac/dc Shunt trip</b> For remote tripping of the breaker, a shunt trip device can be added onto the MCB. The solenoid device opens the breaker after a control voltage is applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts</p>	S800-SOR130
<p><b>110...250 Vdc Shunt trip</b> For remote tripping of the breaker, a shunt trip device can be added onto the MCB. The solenoid device opens the breaker after a control voltage is applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts</p>	S800-SOR250

## Electrical accessories

### Undervoltage release

Description	Part number
<b>24...36 Vac/dc undervoltage release</b>  For remote tripping of the breaker, when the voltage drops below approximately 50% of rated voltage. The breaker can't be operated unless proper voltage is first applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts	S800-UVR36
<b>48...60 Vac/dc undervoltage release</b>  For remote tripping of the breaker, when the voltage drops below approximately 50% of rated voltage. The breaker can't be operated unless proper voltage is first applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts	S800-UVR60
<b>110...130 Vac/dc undervoltage release</b>  For remote tripping of the breaker, when the voltage drops below approximately 50% of rated voltage. The breaker can't be operated unless proper voltage is first applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts	S800-UVR130
<b>220...250 Vdc undervoltage release</b>  For remote tripping of the breaker, when the voltage drops below approximately 50% of rated voltage. The breaker can't be operated unless proper voltage is first applied. Mounts on the left side of the MCB and can be mixed with auxiliary contacts	S800-UVR250

### Remote switching unit and cable

Description	Part number
<b>Remote switching unit (breaker not included)</b>  The RSU will allow a remote operation of the circuit breaker when 24Vdc is applied	S800W-RSU
<b>Connecting cable and plug (mandatory with RSU)</b>  Used with the RSU to provide power and control. 3 meter cable 0.5 mm <sup>2</sup> (#20 AWG) including 10-pole Micro-Fit 3.0™ plug.	S800-RSU-CP

## Electrical accessories

### S803W-SCL-SR Short circuit current limiter, self-resetting UL

Description	Part number
<b>32 A Self-resetting current limiter</b>  For increased short circuit breaking capacity of downstream manual motor starters and high performance MCBs (S800 series)- up to 65kA on approved combination.  	S803W-SCL32-SR
<b>63 A Self-resetting current limiter</b>  For increased short circuit breaking capacity of downstream manual motor starters and high performance MCBs (S800 series)- up to 65kA on approved combination.	S803W-SCL63-SR
<b>100 A Self-resetting current limiter</b>  For increased short circuit breaking capacity of downstream manual motor starters and high performance MCBs (S800 series)- up to 65kA on approved combination.	S803W-SCL100-SR

See technical detail section for approved combination and technical data.

## Mechanical accessories

### Ring tongue adaptor

Description	Part number
 Ring terminal cable connection 40...125 A (kit of 2 nuts, insulation nuts, cable lugs, allen screws and 25mm insulation walls)	S800-RT2125

### Handle operating mechanism

Description	Part number
 Mounts on the circuit breaker and allows "through the door" operation	S800-RD

### Rotary handle

Description	Part number
 Grey rotary handle	S800-RHE-H
 Red emergency rotary handle	S800-RHE-EM

### Shaft extension

Description	Part number
 To connect rotary drive and door handle	S800-RHE-S

S803W-SCL100-SR	250 mm	#2 AWG (35 mm <sup>2</sup> )

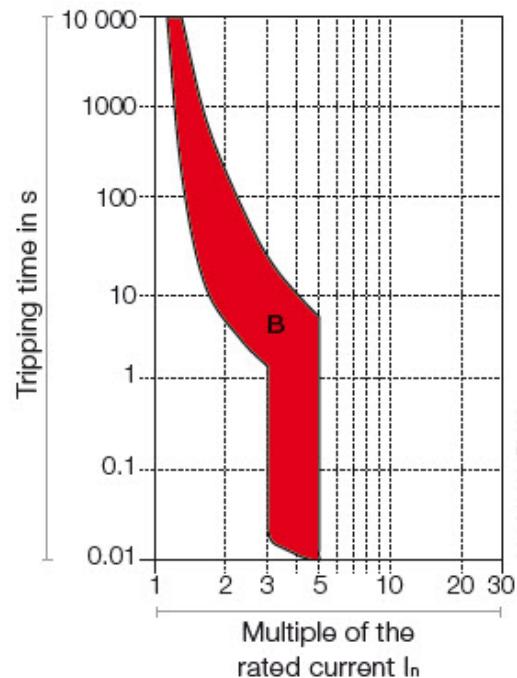

# Tripping curves details

## B tripping curve (S800)

### Description

The "B" characteristic for S800 series offers instantaneous tripping between 3...5 times rated current in 50/60Hz systems.

Used for electric circuits feeding consumers that do not generate any current peaks, or only mild ones (boilers, electric heaters, cooking stoves).

Standard	Currents	Thermal release		Magnetic release
		Small test current	Large test current	Range of instantaneous trip
IEC60947	10...100 A	$1.05 \times I_n$	$1.30 \times I_n$	$3...5 \times I_n$

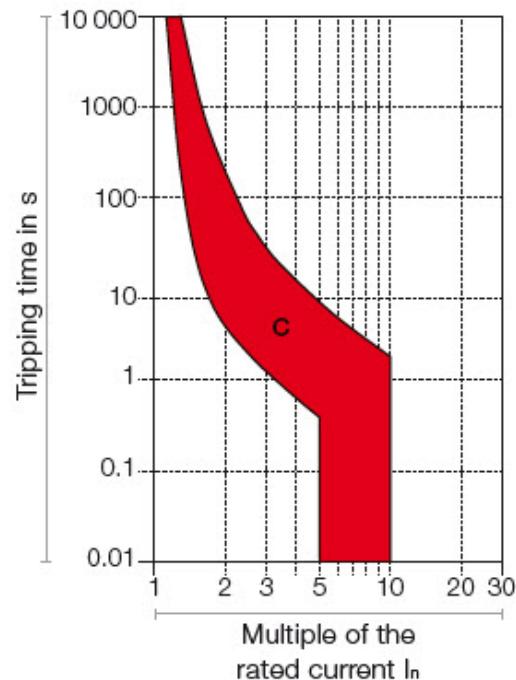

# Tripping curves details

## C tripping curve (S800)

### Description

The "C" characteristic for S800 series offers instantaneous tripping between 5...10 times rated current in 50/60Hz systems.

Used for electric circuits feeding consumers that generate current peaks normal within inductive devices (fluorescent tubes, electric discharge lamps) as well as for circuits within sockets in commercially used systems/plants.

Standard	Currents	Thermal release		Magnetic release
		Small test current	Large test current	Range of instantaneous trip
IEC60947	10...100 A	1.05 x I <sub>n</sub>	1.30 x I <sub>n</sub>	5...10 x I <sub>n</sub>

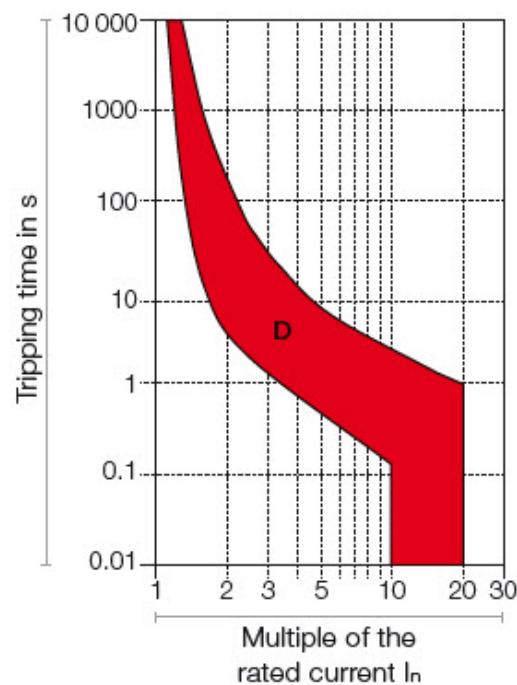

# Tripping curves details

## D tripping curve (S800)

### Description

The "D" characteristic for S800 series offers instantaneous tripping between 10...20 times rated current in 50/60Hz systems.

Used for electric circuits feeding consumers that generate extremely high current peaks (transformers, capacitor banks). As main circuit breaker connected upstream of other circuit breakers (reference overcurrent circuit breaker).

Standard	Currents	Thermal release		Magnetic release
		Small test current	Large test current	Range of instantaneous trip
IEC60947	10...100 A	$1.05 \times I_n$	$1.30 \times I_n$	10...20 $\times I_n$

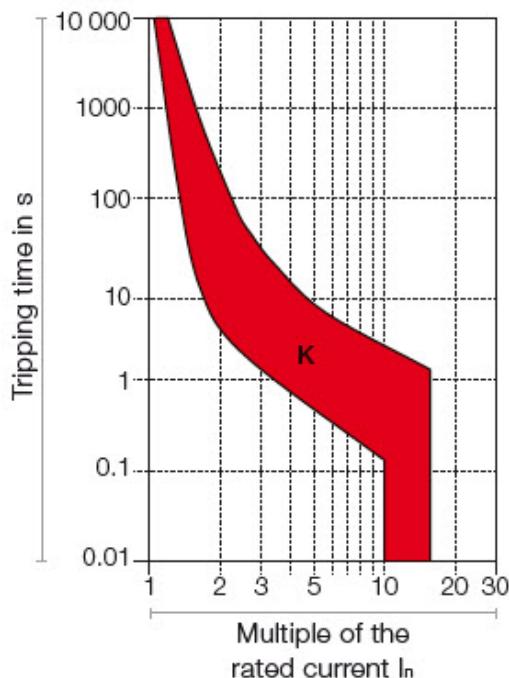

# Tripping curves details

## K tripping curve (S800)

### Description

The "K" characteristic for S800 series offers instantaneous tripping between 10...14 times rated current in 50/60Hz systems.

Used as High Performance MCB in case of high magnetic inrush currents that occur, e.g. in engines or transformers. This characteristic provides the best protection for a wide range of electrical systems by allowing high inrush currents when starting up the system.

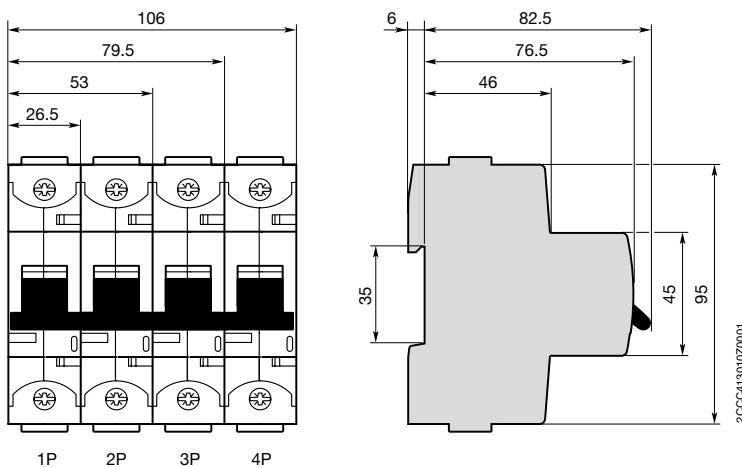

Standard	Currents	Thermal release		Magnetic release
		Small test current	Large test current	Range of instantaneous trip
IEC60947	10...100 A	$1.05 \times I_n$	$1.20 \times I_n$	$10...14 \times I_n$

# Electronic Protection Devices

## EPD24 series

### Description

The protection devices EPD24 extend the ABB product range of Modular DIN Rail Components by electronic overcurrent protection modules for selective protection of 24 V DC load circuits. This protection is achieved by a combination of active electronic current limitation in the case of a short circuit and an overload deactivation from  $1.1 \times IN$  upwards.

If a fault occurs in a load circuit, the protection device EPD24 will detect this rapidly and reliably, disable the power output transistor and hence interrupt the current flow in the defective circuit. The maximum possible overcurrent is always limited to 1.3...1.8 times the selected rated current. An activation of capacitive loads up to 20,000  $\mu F$  is possible, deactivation only occurring in the case of overloads or short circuits. Selective deactivation of the defective current circuit means undefined error states and a complete system stop are prevented.

EPD24	
<b>Rated voltage</b>	24 Vdc
<b>Current range</b>	0.5...12 A
<b>Load output</b>	Power-MOSFET switching output (high slide switch)
<b>Degree of protection</b>	IP20
<b>Dielectric strength</b>	32 Vdc max. (load circuit)
<b>Protection degree</b>	3
<b>Weight</b>	Apprx. 65g
<b>Tightening torque</b>	1.5...1.8 Nm
<b>Wire size</b>	0.5...4 mm <sup>2</sup>
<b>Installation</b>	DIN rail
<b>Approvals</b>	UL 2367 Solid state overcurrent protectors UL 1604 (Class 1 Div.2 Group A, B, C, D) UL508 CSA C22.2 No. 213 (Class 1 Div.2) CSA C22.2 No. 142 CSA C22.2 No. 14 CE marked

### Main features

- Selective load protection, one electronic tripping characteristic.
- Active current limitation for safe connection of capacitive loads up to 20,000  $\mu F$  and on overload/short circuit.
- Current ratings from 0.5...12 A
- Reliable overload disconnection with  $1.1 \times IN$  plus
- Manual ON/OFF button
- Clear status and failure indication through LED and integrated auxiliary contact
- Integral fail-safe element adjusted to current rating
- 12.5 mm wide unit
- DIN rail mounting
- Easy wiring through busbar LINE+ and 0V as well as signal bars
- UL and CSA approvals allow international use of the devices

## EPD24 SERIES

### Electronic Protection Devices

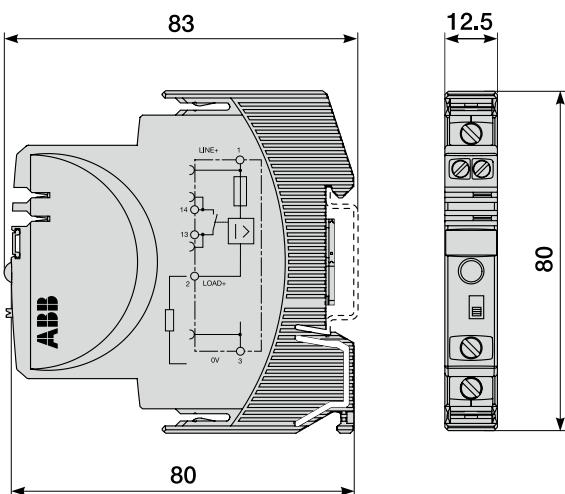

1 pole	Box Qty	Weight each (kg)	Rated Current	Part number
	4	0.065	0.5 A	EPD24-TB-101-0.5A
			1.0 A	EPD24-TB-101-1A
			2.0 A	EPD24-TB-101-2A
			3.0 A	EPD24-TB-101-3A
			4.0 A	EPD24-TB-101-4A
			6.0 A	EPD24-TB-101-6A
			8.0 A	EPD24-TB-101-8A
			10.0 A	EPD24-TB-101-10A
			63.0 A	EPD24-TB-101-12A

#### Busbar / signal bar accessories for EPD24 series

Description	Part number
<b>Busbars</b> Busbars for LINE + and 0V, grey insulation, 500 mm length <sup>(1)</sup>	EPD-BB500
<b>Signal bars</b> Signal bars for auxiliary contacts, grey insulation, 21 mm length	EPD-SB21

<sup>(1)</sup> Maximum load with one line entry 50 A (recommended center-feeding). Maximum load with two line entries 63 A

#### EPD24 approximate dimensions
