

## Relay Output Module

### 81AR01 – E/R0100/R0200

Publication No.  
D KWL 6327 96 E, Edition 06/96

#### Application

This module is mainly used for activating the triggering actuators of the protection equipment in connection with module 83SR04–E/R1411.

#### Features

The module contains 8 relays (function units) which can jointly be connected or disconnected via a ninth relay.

Two versions of the module are available:

- Version R0100  
for actuators to 1 voltage (positive)
- Version R0200  
for actuators two 2 voltages (positive and negative)

#### Description

The module contains type–tested relays \*) with positively driven contacts. This allows to perform disconnecting operations, e.g. 2–out–of–3.

Via auxiliary contacts, the position of each individual relay (function unit 1 ... 8) can be scanned.

Relay K9 is provided for overall disconnection of relays K1 through K8. It contains no position indication.

The outputs for connecting the actuators have a protective circuit (zero diode).

The supply lines for the actuators have fuses of single–pole type (R0100) and twin–pole type (R0200). Based on a certain configuration (cf. "module configuration"), the fuses can be bridged (e.g. in the case of series connection of contacts for a 2–out–of–3 concept).

\*) Acc. to TÜV Rheinland, report no. 945/EL 178/88 of Jan. 7, 1988.

#### Module configuration

##### Setting of jumpers

By using X12 through X19 on module version R0200, supply version Z/UVP is set for function units 1 ... 8.

X1n is plugged onto position 2–3: Fuse UVP active

X1n is plugged onto position 1–2: Fuse UVP bridged

n–out–of–2 (function unit 1) up to 9 (function unit 8).

For module version R0100, jumpers X12 to X19 are mounted onto position 1–2 because there are no fuses.

Using X31 through X38, supply version USP is set.

X3m is plugged onto position 2–3: Fuse USP active

X3m is plugged onto position 1–2: Fuse USP bridged  
(e.g. 2nd, 3rd channel in  
case of 2–out–of–3)

m–out–of–1 (function unit 1) to 8 (function unit 8).

Using X41 through X48, the connection of the relay return lines is set.

X4m is plugged onto position 1–2: Joint return line of relays  
K1 ... K8 directly (ZPS) or  
via relay K9

X4m is plugged onto position 2–3: return line of the relay via  
process connection KmN

m–out–of–1 (function unit 1) to 8 (function unit 8).

## Diagnosis and annunciation functions

### Disturbance annunciations on the module

On the module front, red light-emitting diodes are provided to indicate:

	LED designation
– Disturbance	ST
– Module disturbance	SG
– Fuse monitoring	ST (1 ... 8)

Light-emitting diode ST signals all disturbances of the module.

Light-emitting diode SG signals pure module disturbances.

Light-emitting diodes ST (1 ... 8) signal the response of fuse monitoring USP and with module version R0200 also UVP.

### Status annunciations on the module

On the module front, green light-emitting diodes are provided to indicate:

	LED designation
– Relay picked up	EIN (1 ... 8)

Light-emitting diodes ON (EIN, 1 ... 8) indicate that the respective relay has picked up.

### Disturbance signals to the annunciation system

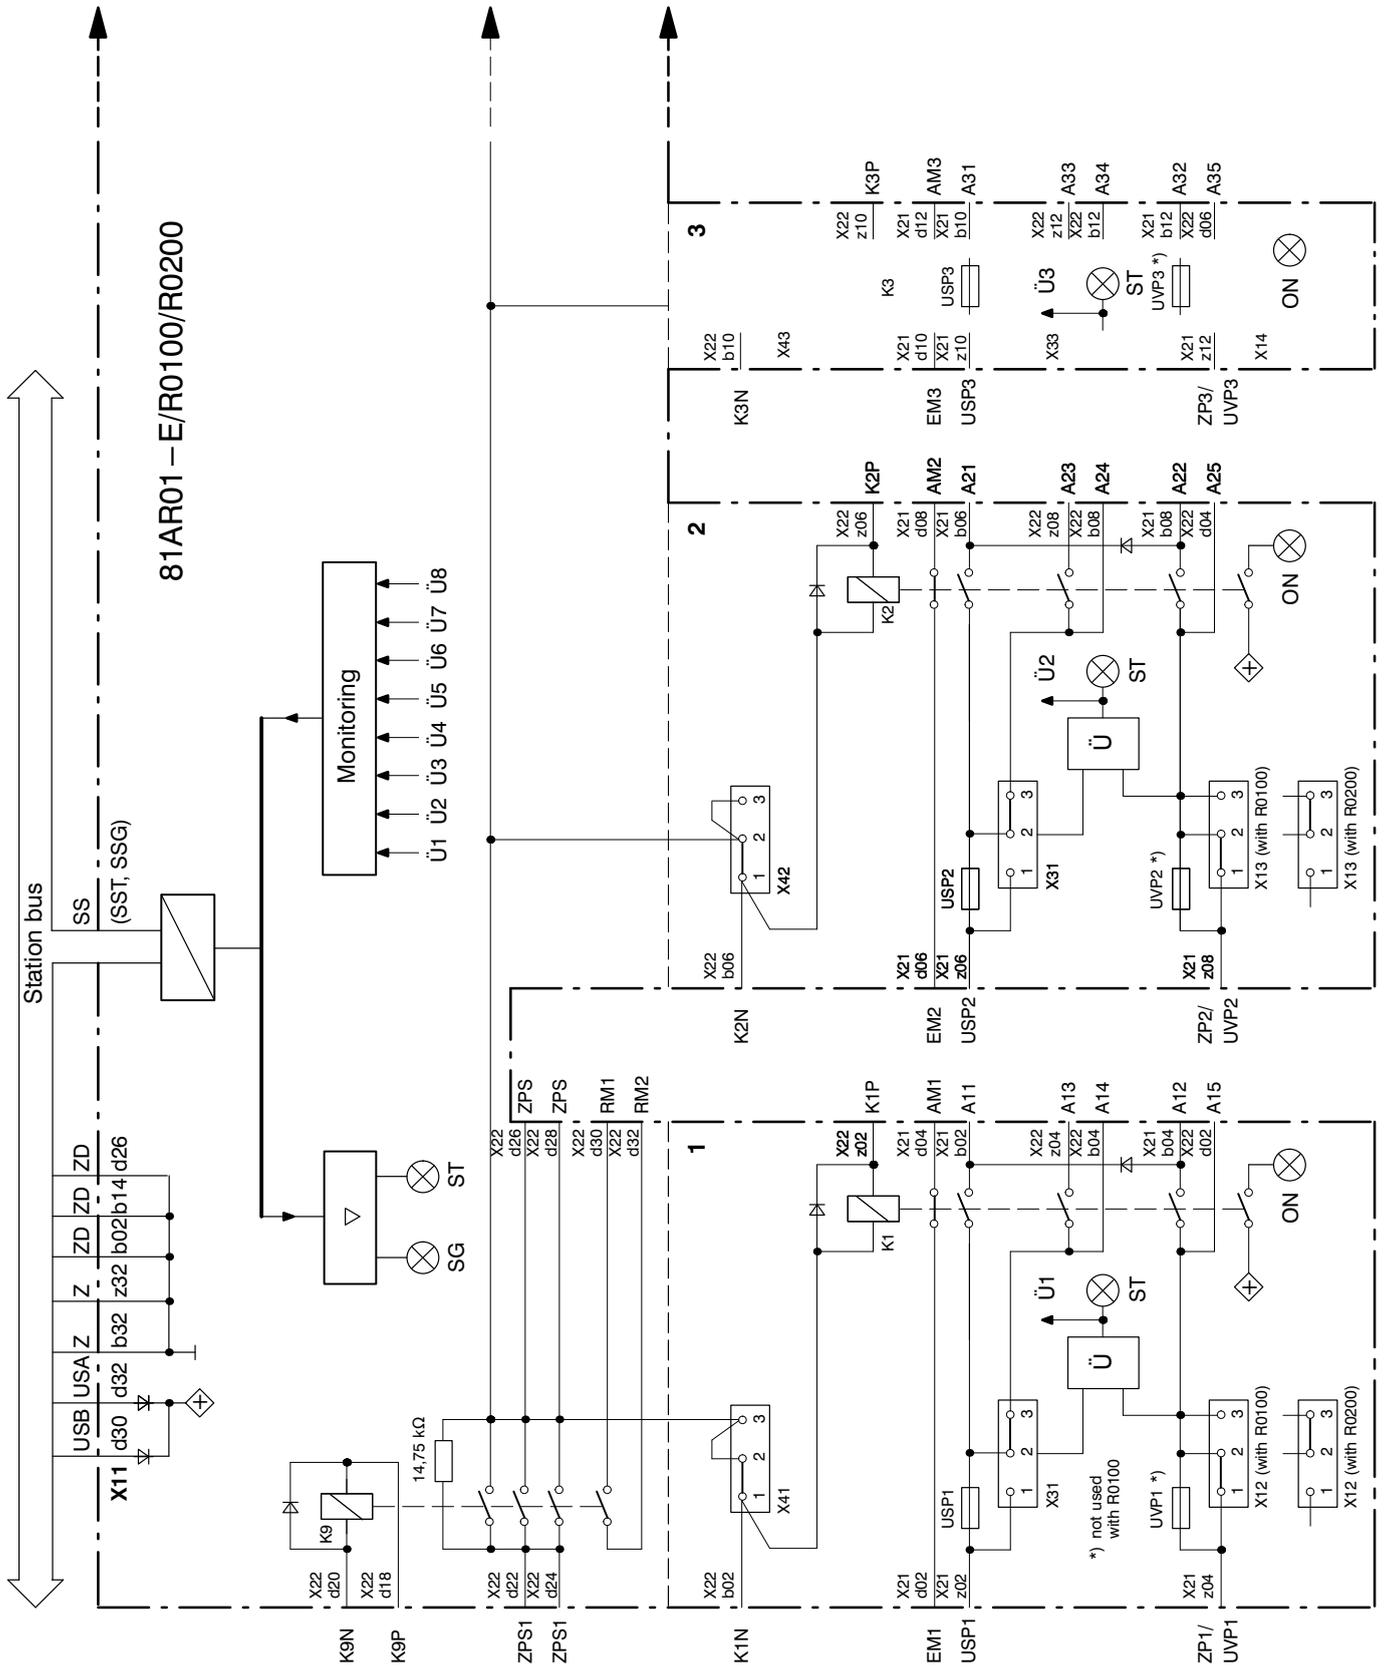

Via bus lines SST and SSG, the disturbance signals are available.

# Function diagram

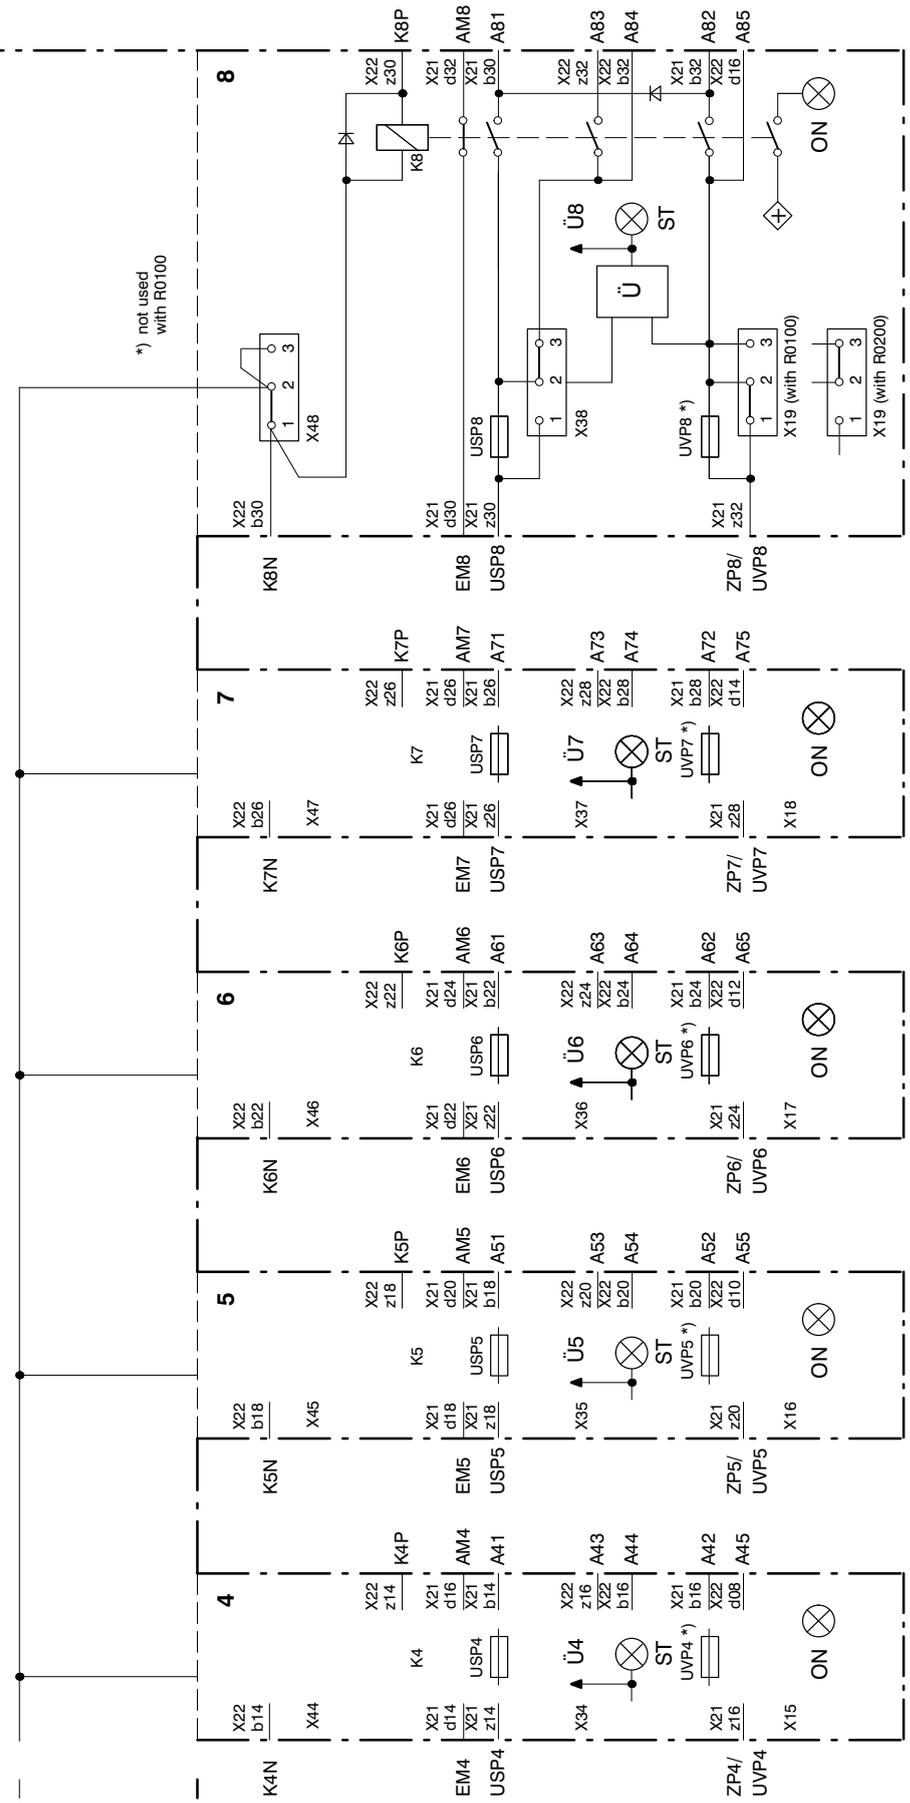

## Terminal designations

The printed-circuit boards include connectors X11, X21 and X22.

Connectors X21 and X22 contain all process inputs and outputs. Connector X11 contains station bus connections SST and SSG as well as operating voltages USA and USB.

81AR01 – E/R0100/R0200  
(continued)

## Mechanical design

Board size: 6 units, 2 divisions, 160 mm deep

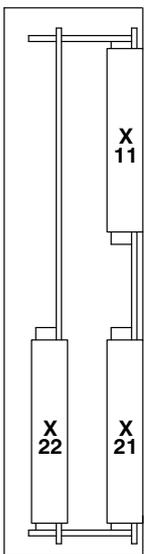

Connector: to DIN 41 612

1 x for station bus connection,  
48-pole edge connector, type F  
(connector X11)

2 x for process connection,  
48-pole edge connector, type F  
(connectors X21, X22)

Weight: approx. 0.995 kg

## Technical data

In addition to the system data, the following values apply:

### Power supply

Operating voltage module	USA/USB = 24 V
Current consumption	IS = 30 mA + output values
Power dissipation	PV = 0.8 ... 5.3 W depending on operating voltage and configuration
Reference potential for process side	Z = 0 V
Reference potential for bus side	ZD = 0 V

### Input values

Relay coil (K1 ... K9)	
Pick-up voltage at 20 °C	≥ 18 V
Release voltage at 20 °C	≤ 3.6 V
Coil resistance at 20 °C	1152 Ω ± 10 %

### Output values

Contact outputs (K1 ... K9)	
Switching voltage	≤ 60 V
Switching current	≤ 2 A
Contact rating	≤ 120 W

### Switching times

Pick-up time	≤ 30 msec
Release time	≤ 20 msec
Bounce time	≤ 1 msec

### Type of fuse

fuse-link 5 x 20 mm to DIN 41660  
GMN 977000 P17 (F2A)

### Interference immunity (of process outputs)

ESD acc. to IEC 801/2	8 kV to front panel
EMC acc. to IEC 801/4	1 kV burst
Destruction acc. to IEC 801/5 (draft); IEC TC 65 (sec) 137	1 kV reference potential

### ORDERING DATA

Order no. for complete module:

Type designation: 81AR01-E/R0100  
81AR01-E/R0200

Order number: GJR2397800R0100  
GJR2397800R0200
