

RELION® PRODUCT FAMILY

# Grid automation relays REC615 and RER615

## Protection of cable feeders and overhead lines with superior fault detection and location

# Compact and versatile solution for making grids smarter

Grid automation protection and control relays, REC615 and RER615, are designed for remote control and monitoring, protection, fault indication, power quality analyzing and automation in medium voltage secondary distribution systems.

REC615, grid automation protection and control relay, and RER615, recloser protection and control relay, are suitable for a wide variety of power distribution networks, which can include distributed power generation, secondary equipment such as medium voltage disconnectors, breakers, switches, ring main units or reclosers. REC615 and RER615 are a member of the Relion® product family. The Relion family relays have been designed to unleash the full potential of the IEC 61850 standard for communication and interoperability between substation automation devices.

## Application

With REC615 and RER615, grid reliability are enhanced, ranging from basic, non-directional overload protection to extended protection functionality with power quality analyses. Thus, REC615/RER615 meets today's requirements for smart grids and supports the protection of cable feeders and overhead lines in isolated neutral, resistance-earthed, compensated and solidly earthed networks. REC615 and RER615 are freely programmable with horizontal GOOSE communication, thus enabling sophisticated interlocking functions. The new adaptable standard configurations allow for this relay to be taken into use as soon as the application-specific parameters have been set.

REC615 and RER615 provide superior fault location, isolation and restoration (FLIR) to lower the frequency and shorten the duration of power outages. REC615 and RER615 also include advanced earth-fault detection methods that can detect developing faults in the network before they cause an outage.

REC615 and RER615 offer a variety of features to enhance grid reliability and functionality.

- Multiple controllable objects (up to ten objects including two breakers)
- Powerful in compensated networks (including recloser tripping curves)
- Sophisticated protection functionality to detect, isolate and restore power in all types of networks
- Integrated power quality measurement, including voltage dips and swells logging
- Freely programmable
- Load profile and event logging
- Flexible autoreclosing function
- Six easily manageable setting groups
- Adaptable standard configurations for rapid commissioning
- Web-based parametrization tool with download possibility
- Same configuration tools as for other Relion product family relays such as the 615, 620, 630 and 640 series
- Cyber security features such as audit trail
- Withdrawable-unit design
- Large, easy-to-read LCD screen with SLD, local control and parametrization possibilities with dedicated push buttons for safe and easy operation
- Four programmable function keys to support direct access of additional control functions
- IEC 60870-5-101/104, DNP3 level 2, Modbus or IEC 61850 with GOOSE messaging communication for high-speed protection, fault isolation and restoration
- Extendable I/O with RIO600
- Environmentally-friendly design with RoHS compliance

### Human Machine Interface

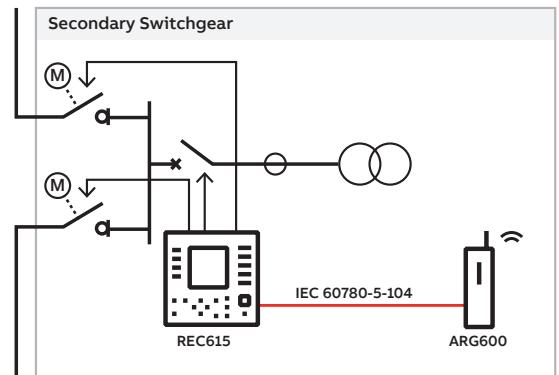

As a member of the Relion product family, REC615 and RER615 share the same Human Machine Interface (HMI) look and feel as the other Relion family relays. This has the added benefit that once you become familiar with one Relion relay, you can use them all.

REC615 is equipped with a large graphical display which can show customizable single-line diagrams (SLD) with position indication for the circuit breaker, disconnectors and the earthing switch. Also measured values provided by the chosen standard configuration can be displayed. The SLDs are customized using the PCM600 IED tool and can have multiple pages for easy access to selected information. The SLDs can be accessed not only locally but also via the web browser-based HMI that has now been enriched with a number of usability enhancing features.

Four programmable function keys support direct access of additional control functions (e.g. Hotline tag, non-reclose mode, enable/disable protection function). Eleven freely configurable and programmable two-color LEDs are available to visualize the status and alarms.

Two breakers and up to eight load-break switches or one recloser can be controlled via the relay's front panel HMI or a remote control system. To protect the relay from unauthorized access and to maintain the integrity of information, the relay is provided with a four-level,

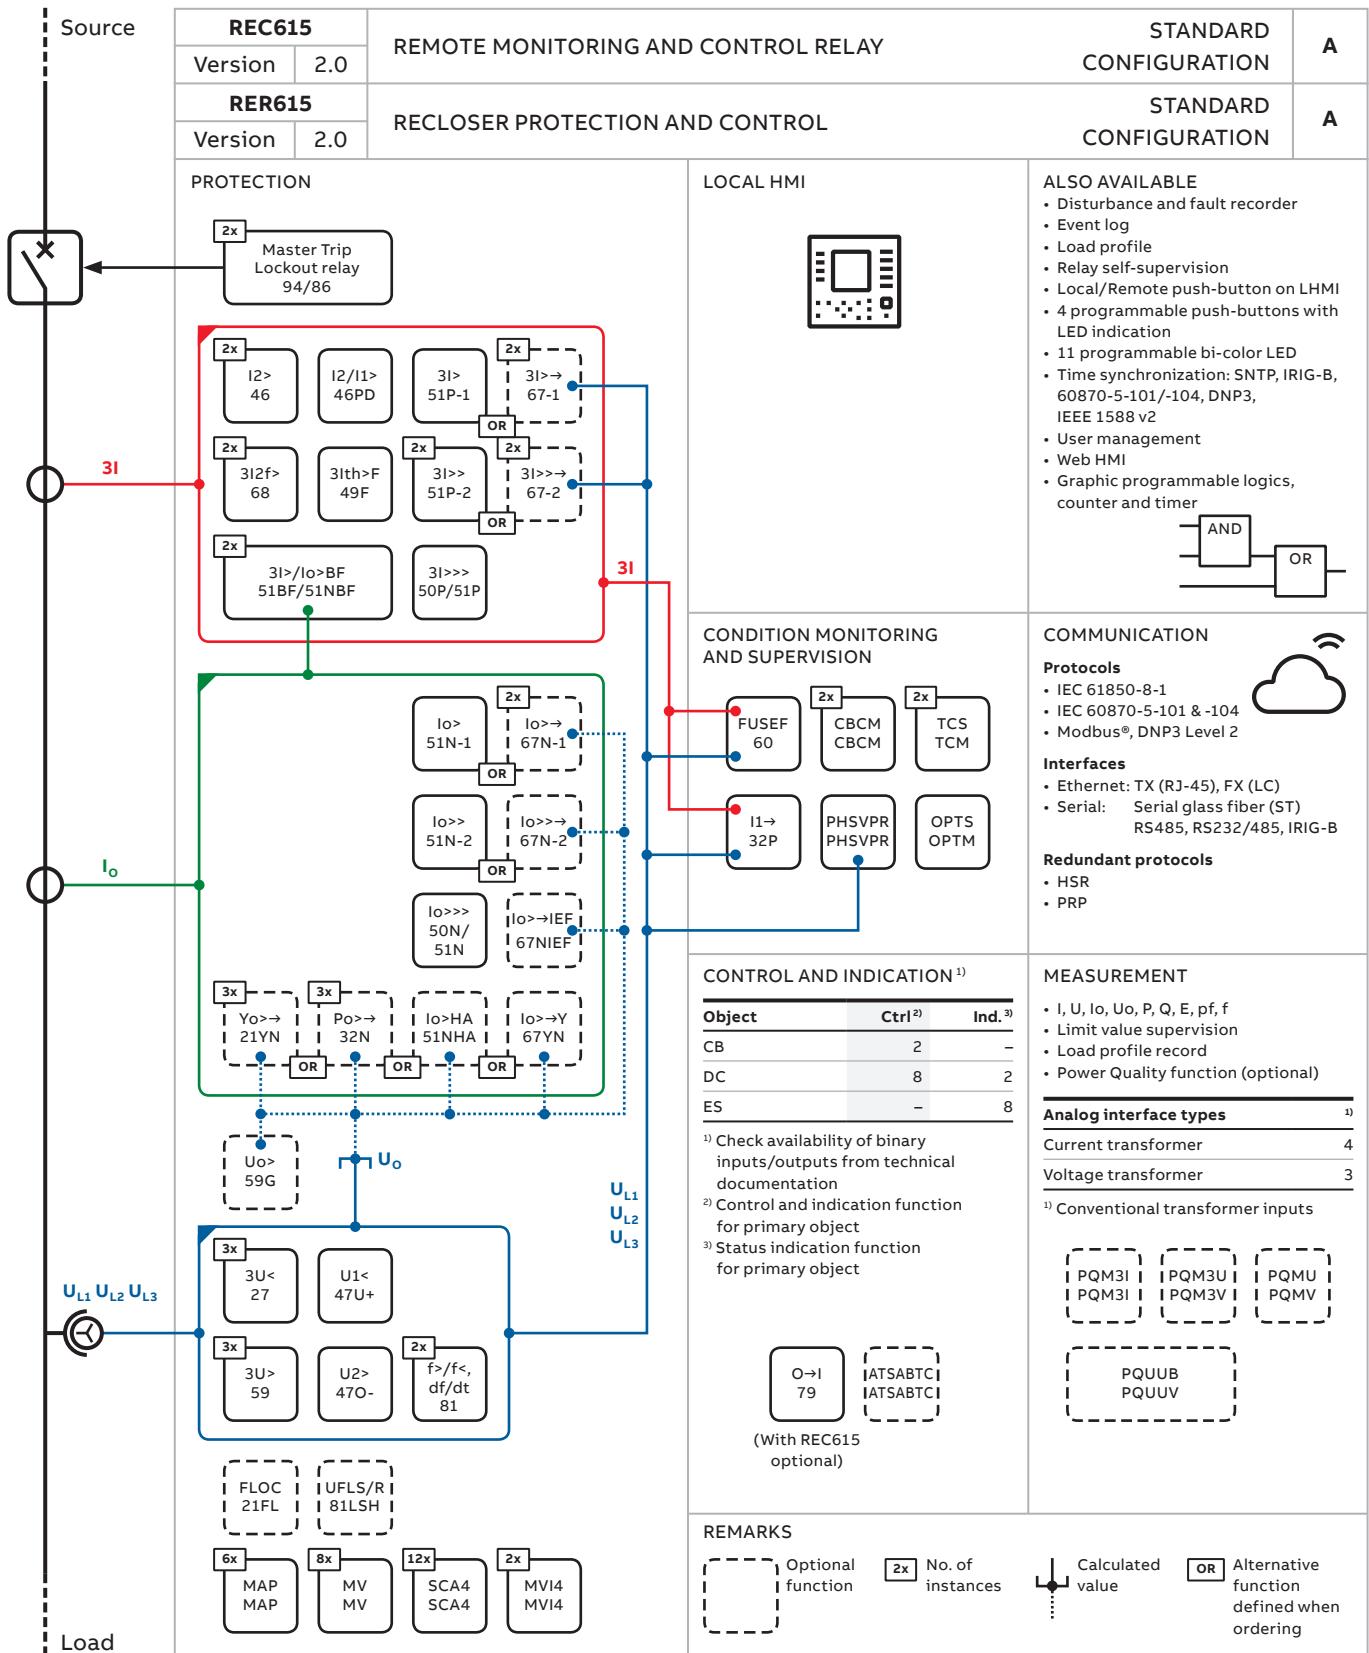

role-based user authentication system, with individual passwords for the viewer, operator, engineer and administrator levels. The access control system applies to the front panel HMI, embedded Web browser-based HMI and Protection and Control IED Manager PCM600.

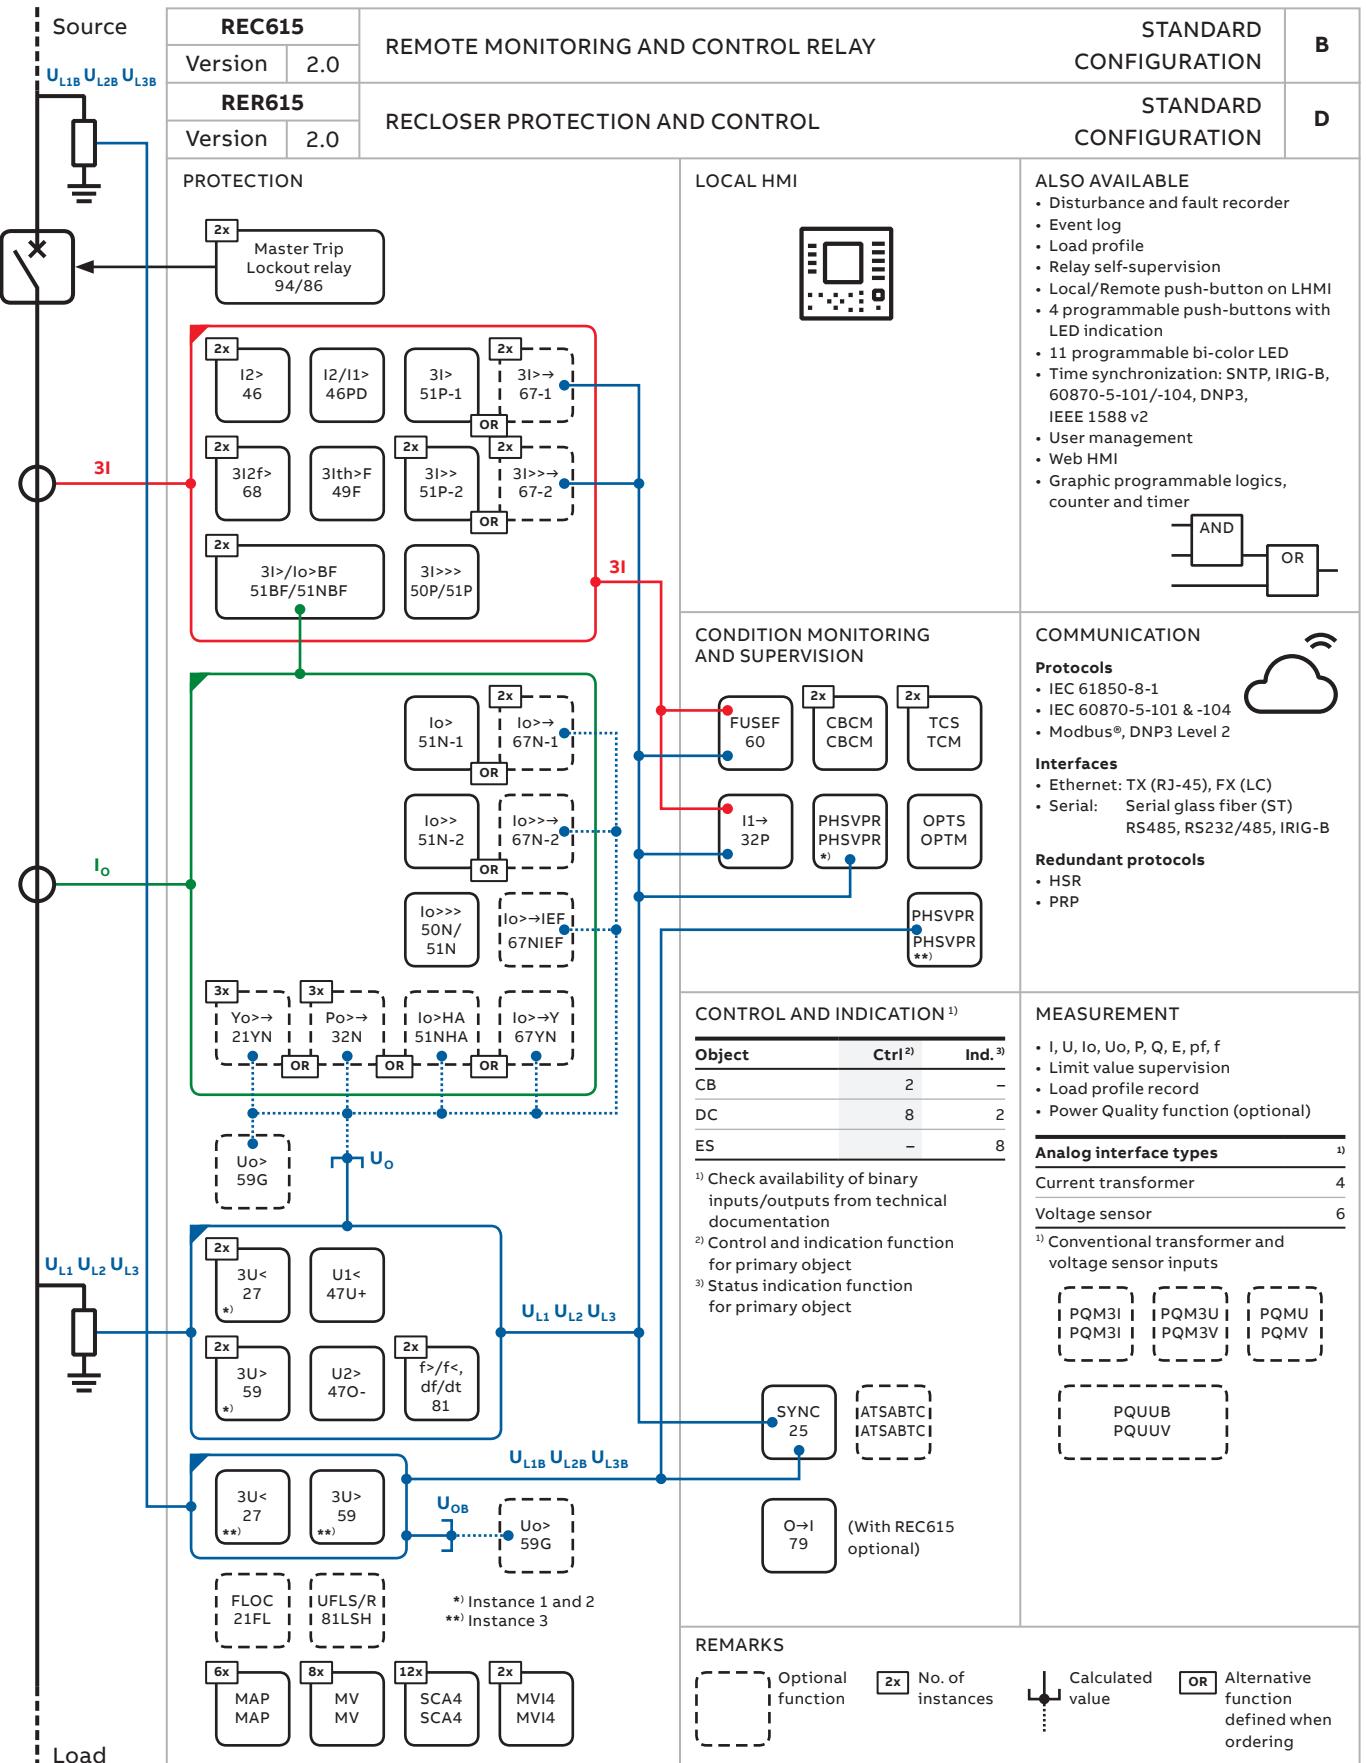

### Standardized communication

REC615 and RER615 support a variety of communication protocols for remote communication, such as IEC 60870-5-101/104, DNP3 level 2 and Modbus, simultaneously also supporting IEC 61850 with GOOSE messaging.

# Function overview

# Standard configurations
