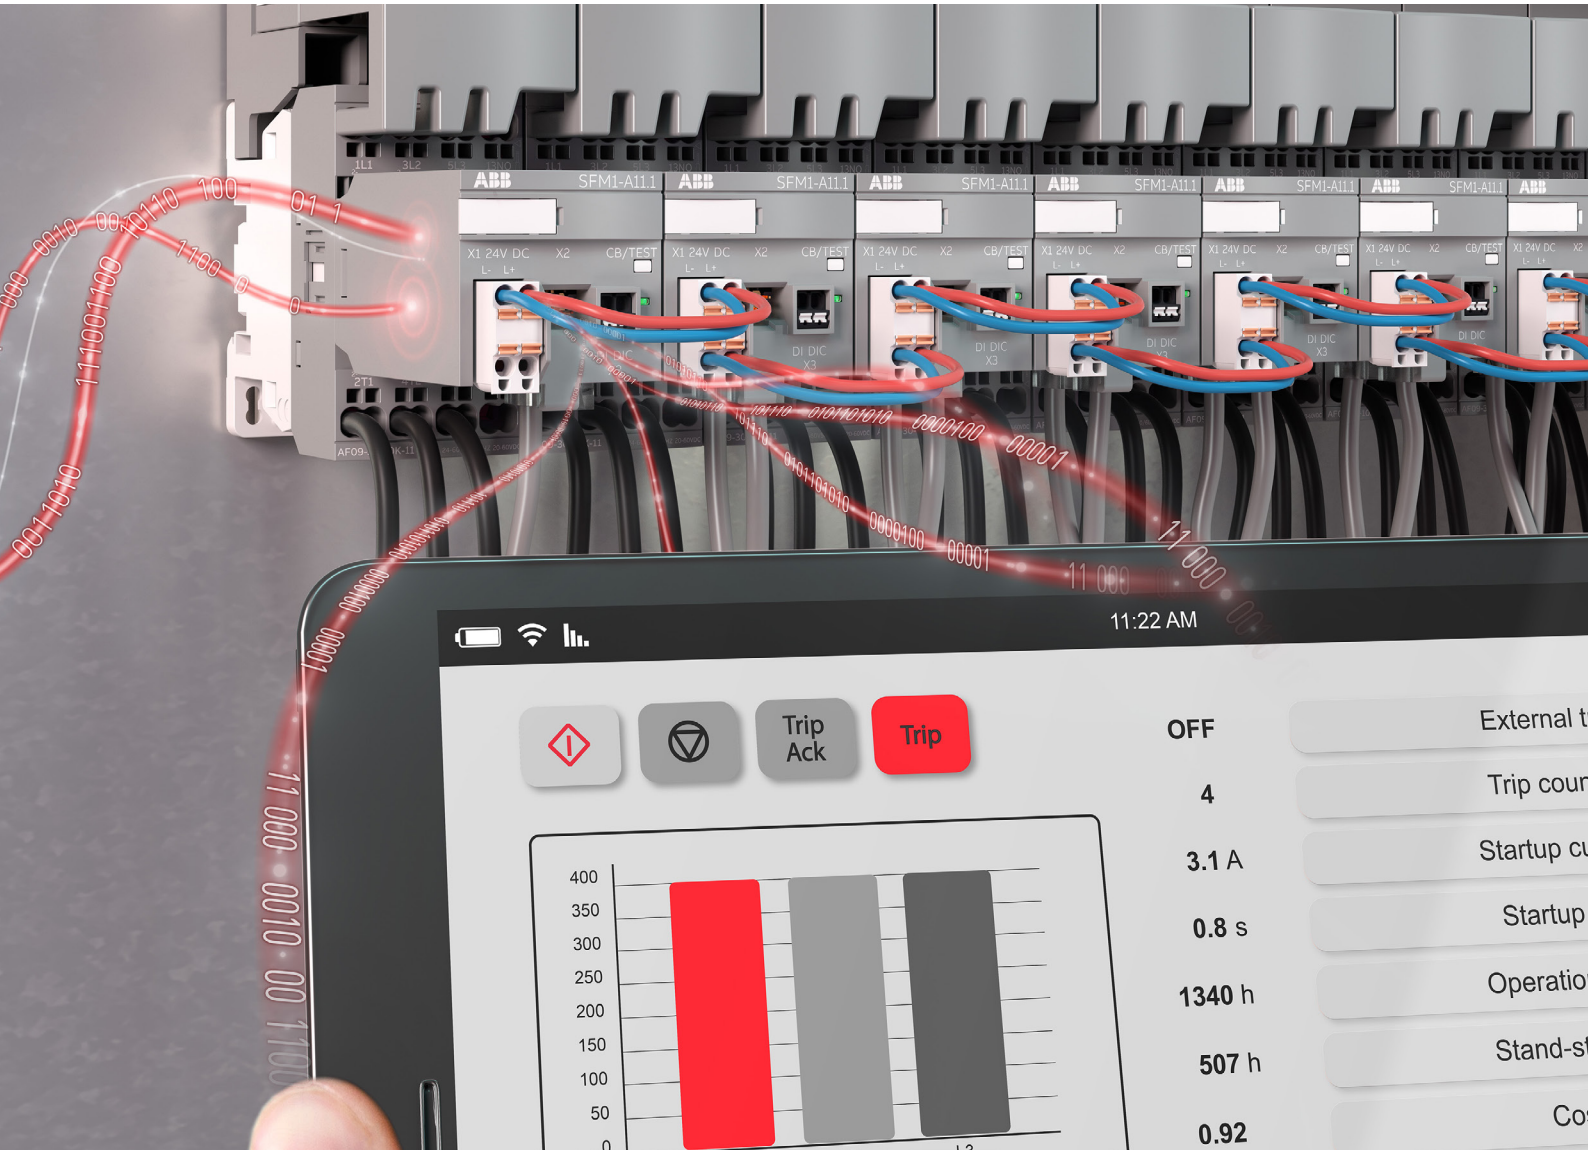
MOTOR STARTING AND PROTECTION

Advanced digitalization, simplified

ABB Novolink™ smart modules for AF contactors



- **Easy design and commissioning**
- **Innovation through digitalization**
- **Optimized operations and maintenance**

The ABB Novolink™ devices help digitalize your motor starting solutions and gain insights into the connected loads. They're easy to design into existing wiring plans and connect to standard AF contactors.

Installation is fast and simple, thanks to reduced wiring and fewer components, so your engineering efforts are minimized. With the open standard OPC UA communication interface Novolink devices can be integrated into any modern control and monitoring system.

Novolink devices enable predictive maintenance to reduce downtime, as well as increasing efficiencies and boosting cost savings. And the possibilities open up even more with full remote access to your data, creating new maintenance service and revenue opportunities.

So to simplify engineering, optimize operations, save time and cut costs, think Novolink.

Table of contents

Motors - the key driver of world industry

Motors make the industrial world go round. With the latest digitalization innovations, the control of your motors can achieve even higher levels of efficiency with benefits such as real-time data monitoring and predictive analytics.

*own estimations

Zero
need to replace existing AF contactors

ABB's market-leading contactors have an advanced, electronically-controlled magnet system that covers the complete power range. Our contactors are complemented by a full list of accessories. Novolink devices are compatible with 24 V DC coil contactors – from AF09 up to AF96 in screw & from AF09 up to AF38 in Push-In Spring.

Digitalize one of the best motor starting portfolios on the market

Decide for yourself how you want to digitize your motor starting solutions - with the new Novolink modules even advanced motor protection and equipment monitoring is fast and easy.

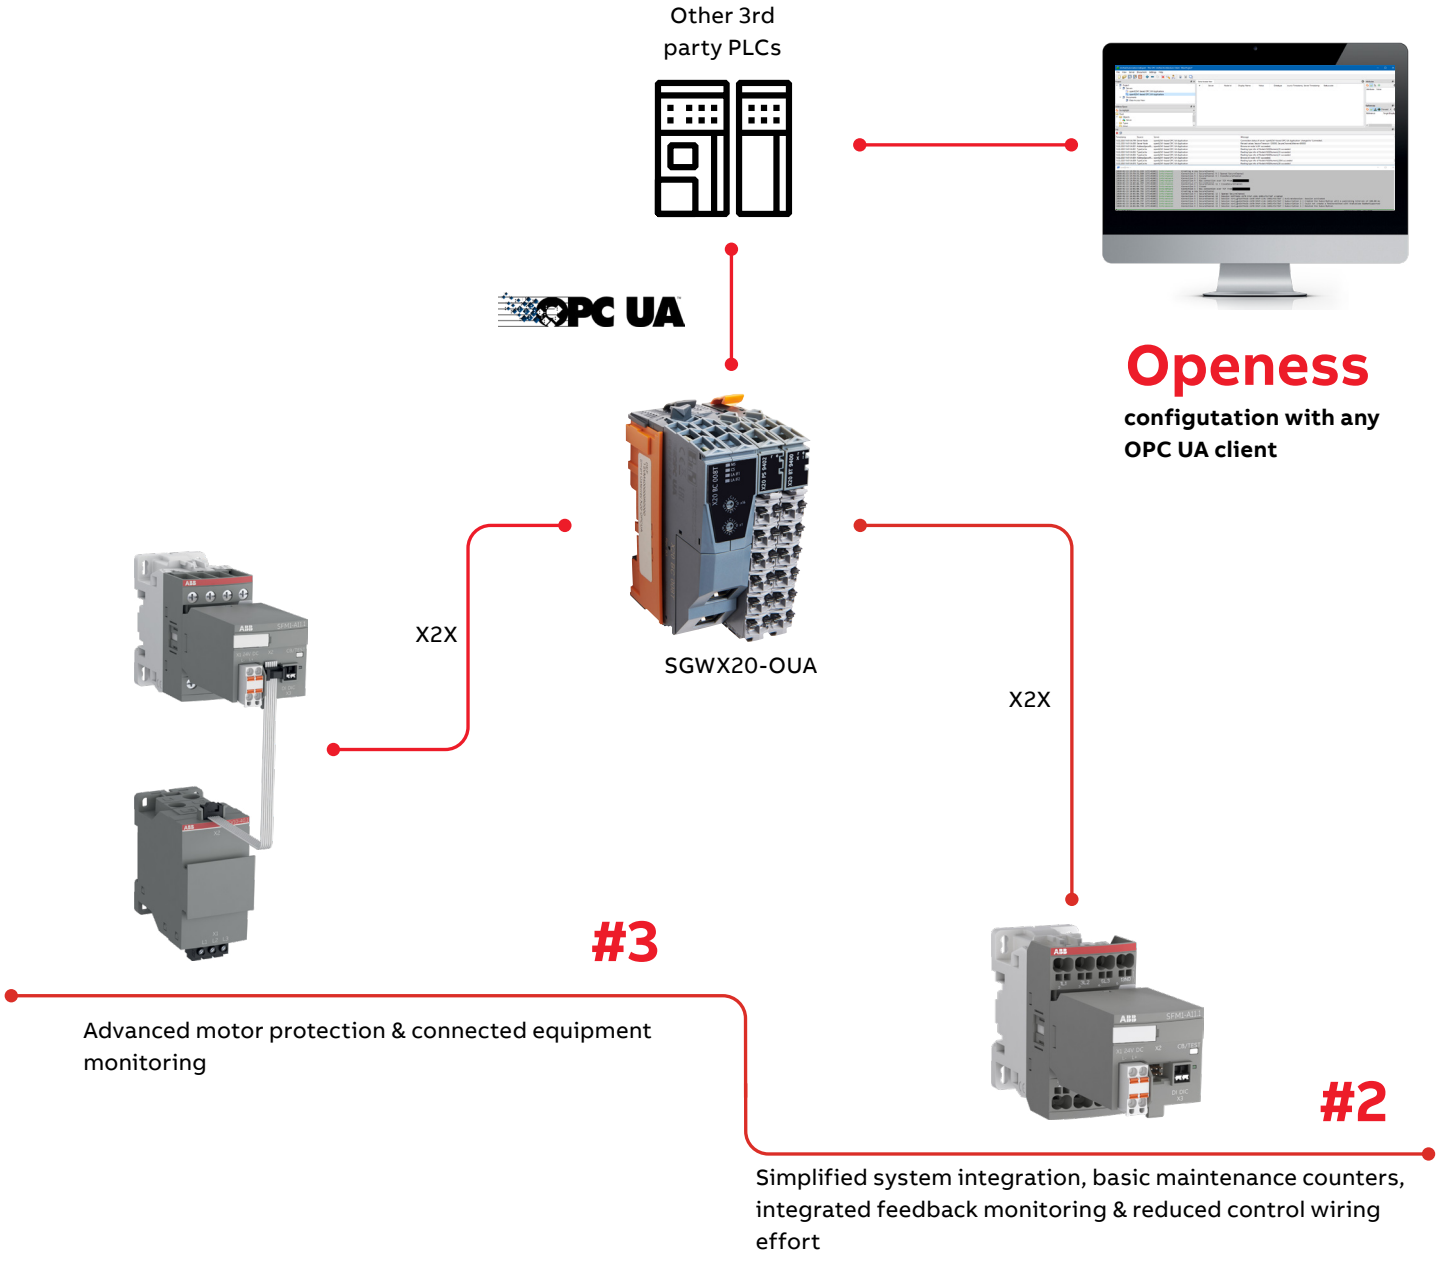
B&R system integration

You can quickly and easily integrate the Novolink modules into your existing B&R system and thus make full use of many B&R applications. For example, simply monitor your equipment in the B&R automation studio.

Easy integration into any other system using OPC UA

Various levels of digitalization of your existing motor starting portfolio are possible with the Novolink modules. Select and mix as needed, the choice is yours.



Integration into any PLC or higher level system
The integration is easily achieved thanks to the new Smart Gateway. This way you can integrate the Novolink modules into your system based on open standards considering safety right from the beginning.

From conventional to digital

With Novolinks' enhanced capabilities, you can move from corrective to predictive maintenance, continually optimizing your process.

Limited to
- Hardwired (remote) control and interlocks
- Protection and metering functions with conventional devices

Connection
- Seamless integration into the B&R automation studio
- Seamless integration into 3rd party PLCs with OPC UA

Collecting data
- Measurements such as current, voltage, power
- Diagnosis information and maintenance counters

Control & supervision
- Remote control
- Condition monitoring
- Condition based maintenance

Delivering solutions
- Enabling predictive maintenance
- Data analysis
- Create new business models
- Analyze and adapt through machine's lifecycle to improve long-term performance
- Connectivity via B&R solutions for remote service and access (SCADA, audit trail, cloud connection, MRS/ERP links ...)

Digital capabilities to deliver Industry 4.0

Digitalization is no longer optional. Novolink devices offer a smart, competitive edge, improving reliability and reducing maintenance costs.

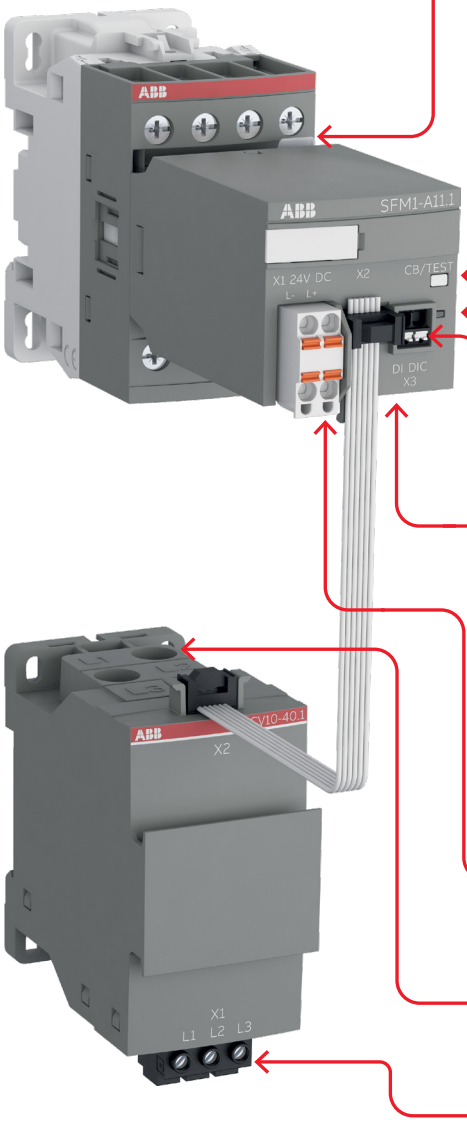
Smart devices enhance traditional control gear with digital capabilities. They enable the predictive maintenance, remote control, fault diagnostics and data analytics required for Industry 4.0. Monitoring is taken to a new level, using collected information to analyze performance data – including current levels, operating cycles and load levels.

This allows operation and maintenance managers to effectively improve reliability and reduce maintenance costs. With B&R PLCs or any other PLC via OPCUA, monitoring can even be managed from a remote location, eliminating the need for maintenance personnel to conduct regular on-site checks.

A closer look at smart devices

Smart function device SFM1
This contactor module snaps onto contactors from AF09 to AF96 with 24 V DC operated coil. It is seamlessly integrated into the B&R automation system via the X2X bus.

- Provides relevant maintenance counters like motor operating hours, trip counters and more
- Allows monitoring of short circuit protection devices using a digital input
- Helps to detect problems in load, supply and feeder side in order to solve problems as quickly as possible



Catch for mounting and dismounting the module

Provides visual feedback of the contactor state. Option for manual contactor operation e.g. during commissioning or test

Status LED

Digital input for checkback monitoring

X2X in and out

24 V supply for SFM1 and contactor

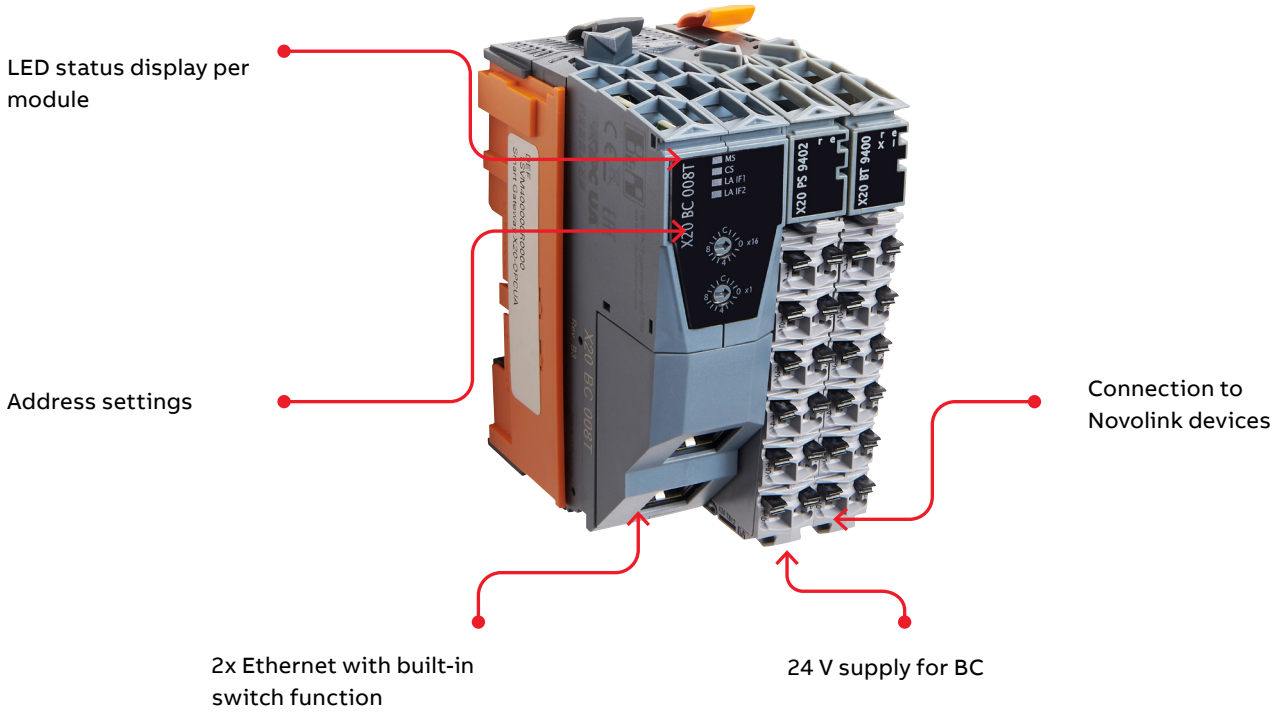
Path-through CT

Voltage inputs (SCV10 only)

Smart current voltage devices SCV10/SC10
These high-end motor protection devices provide an optional extension to the contactor module. They enable the status of the connected equipment to be assessed.

Both types:
- Measure phase currents, frequency, earth fault, total harmonic distortions and other relevant parameters
- Feature an advanced thermal model of the motor which is calculated for selectable trip classes from 5E - 30E
- Time to trip, time to cool and the actual thermal load level are available for optimized control
- Integrated current transformers up to 40 A nominal current

SCV10 only:
- Additional integrated voltage measurement up to 690 V AC
- Cos-phi and real power allows to monitor and protect pumps and other connected loads



Smart gateway SGWX20-OUA
The SGWX20-OUA is a bus coupler that maps the X20 system internal communication to the open standard OPC UA communication. It provides users with a ready-made solution for accessing Novolink devices via OPC UA.

- Open standard communication
- I/O Data Configuration
- Diagnosis Data
- Device Configuration
- Integrated switch for daisy-chaining
- 2x 1 Gbit/s full-duplex mode
- OPC UA and module diagnostics at runtime
- 24 V DC power supply

Novolink devices in low voltage motor applications

Explore a world of potential, from control to distribution panels.

Novolink's ease of commissioning and functionality creates enormous opportunities for a wide range of industrial applications. Applications include:

Pump

HVAC

Textile

Agitator

Fans

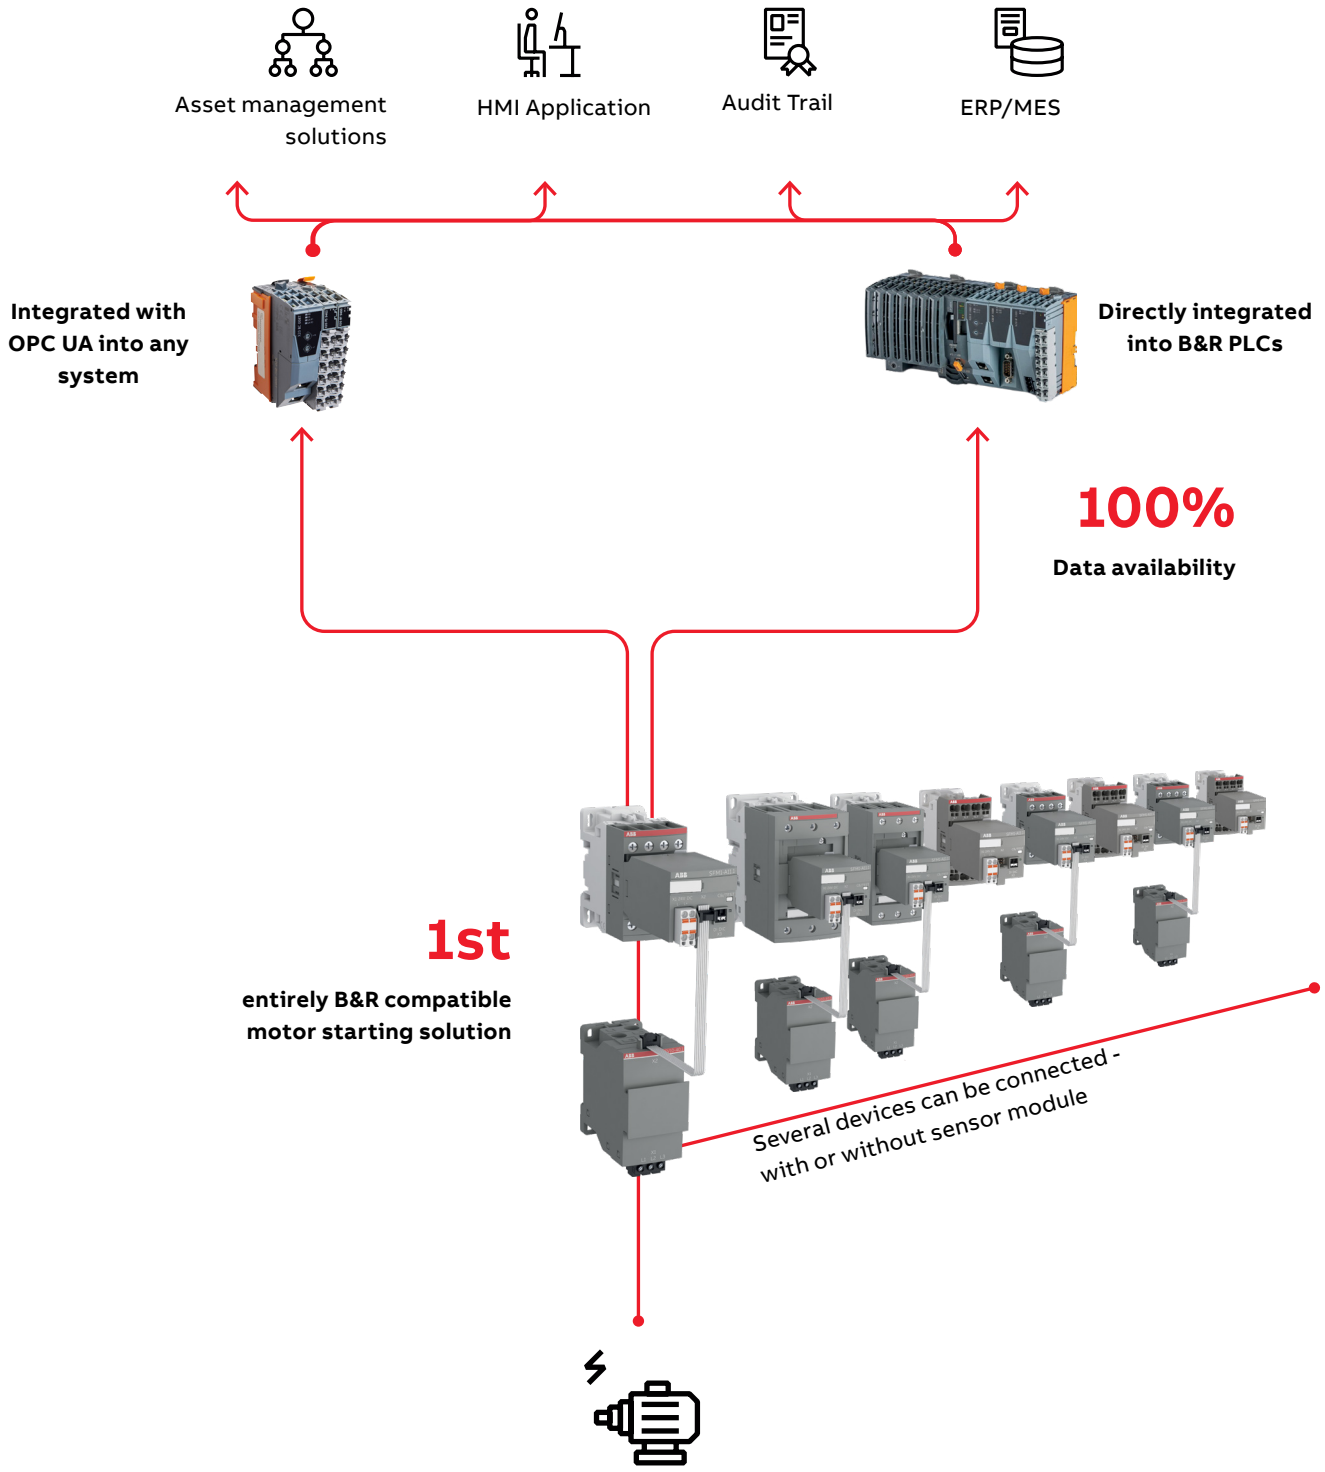
Heating

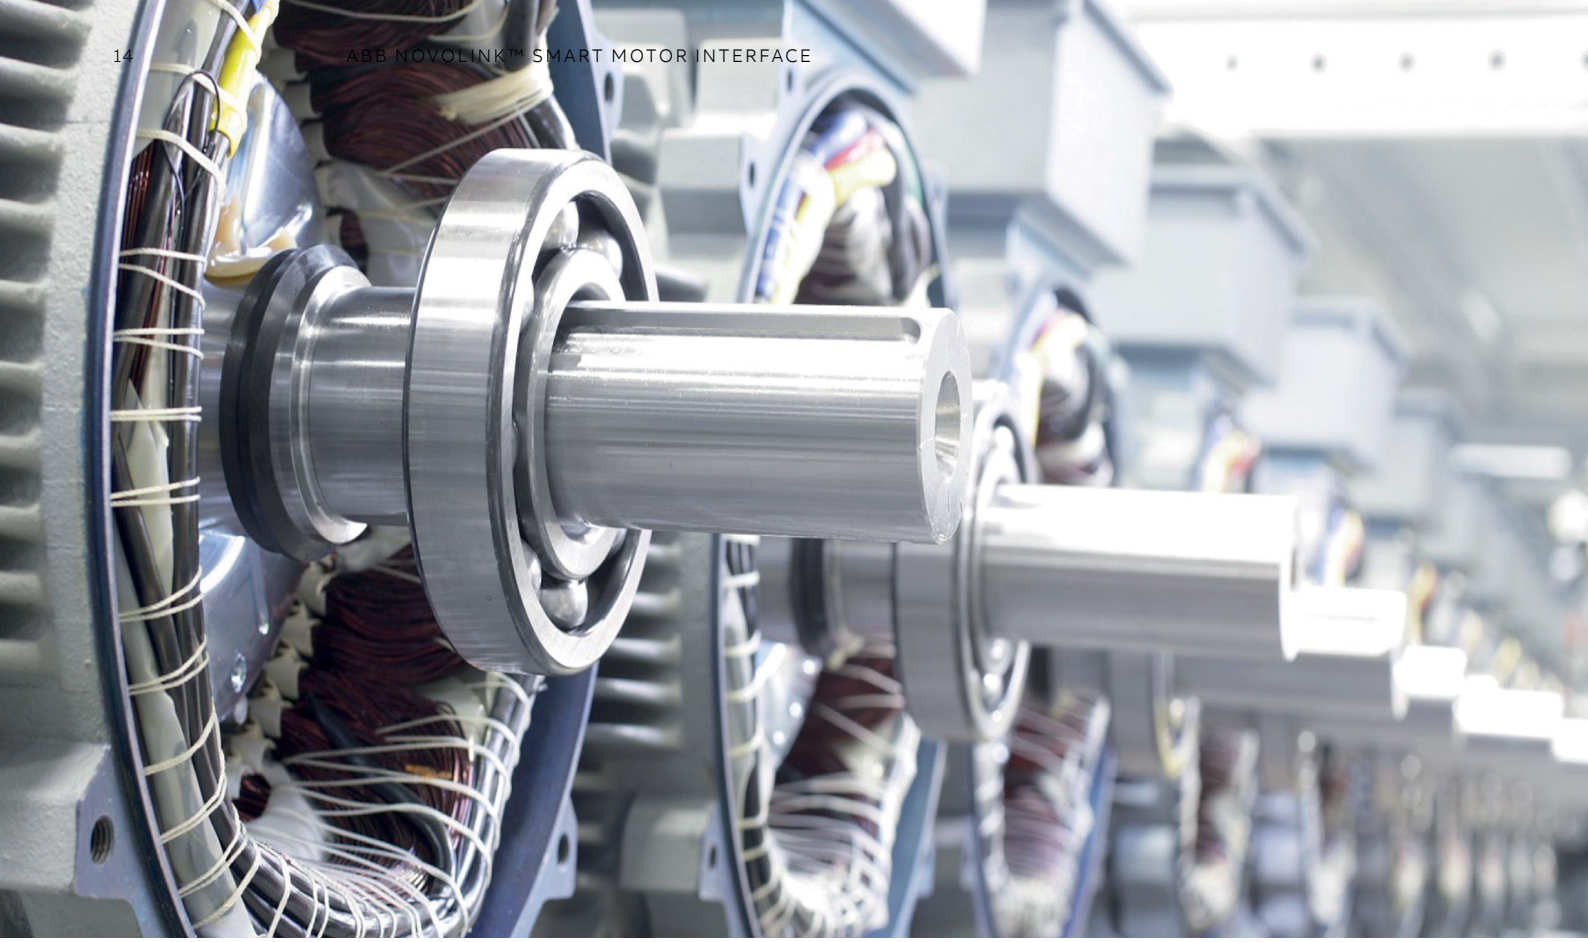
Lighting

Conveyors

The link between motors and digitalization

By effortlessly connecting the factory floor higher level systems or even the cloud, Novolink is essential to increase overall equipment effectiveness.





Engineering efficiency

Only few configurable components cover a wide range of applications, reducing devices where otherwise auxiliary devices are needed.

Preventive machine maintenance

Preventive machine maintenance uses live data from relevant motor parameters

Speed of installation

Reduction of control side wiring. Integration of multiple functions into one device. Reduction of required PLC I/O signals.

Remote control and monitroing

Digitalization allows remote contactor control and condition monitoring

Open communication

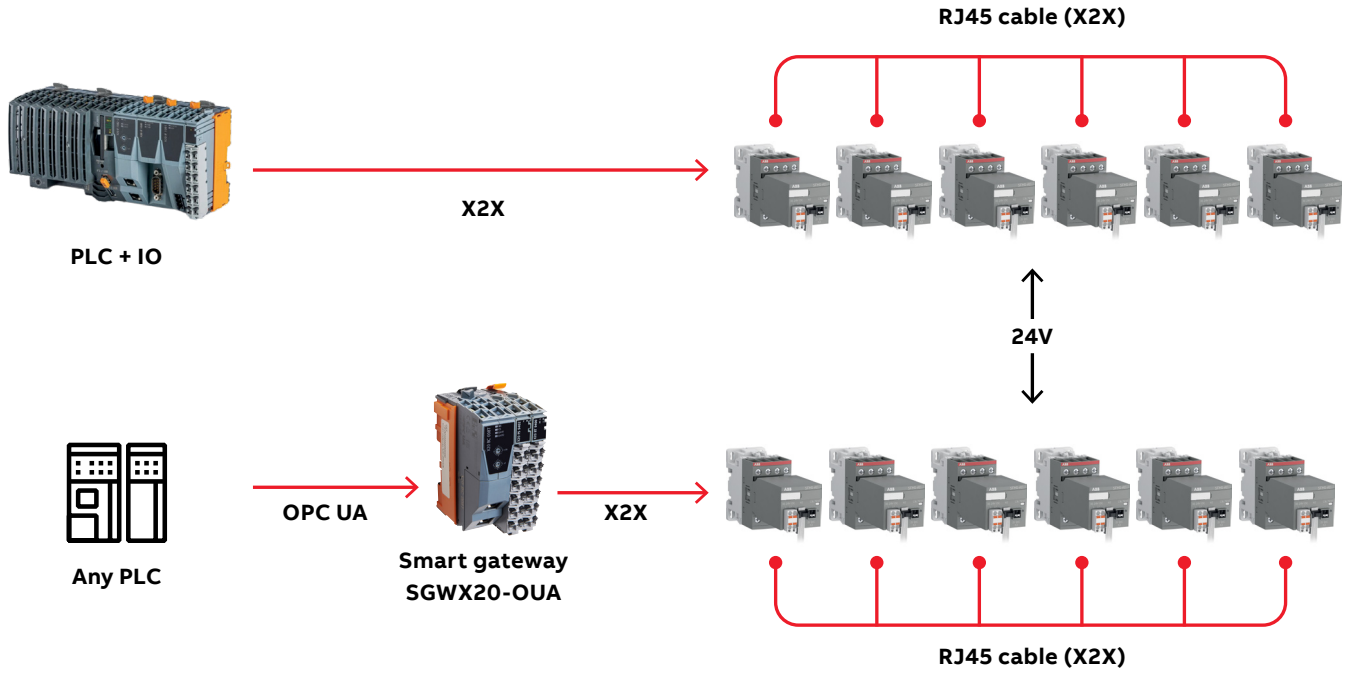
Open communication through OPC UA interface.

Built-in security

Increased security through protected commissioning and access reduces the risk for outages.

Simple integration into your preferred system

The Novolink solution integrates seamlessly into B&R as well as other third-party system solutions, thereby minimizing the time required for installations.



B&R advanced application integration
Data from the Novolink devices can be used directly with a wide range of B&R system applications including SCADA, HMI application, audit trail, ERP/MES and cloud infrastructure.

Integration into other systems
With the new smart gateway SGWX20-OUA an open and secure communication through an OPC UA interface with other PLCs and systems is enabled, allowing the integration of the Novolink solution.

Open communication via OPC UA

Open Platform Communication (OPC) - Unified Architecture (UA) is an industrial communication protocol for establishing machine-to-machine landscapes. OPC standardizes access to machines, devices, and other systems in an industrial environment and enables an uniform and manufacturer-independent data exchange. The Unified Architecture is the latest specification of this standard, which makes it platform independent.

Transform your existing portfolio with the B&R Automation Studio
The B&R Automation Studio offers an integrated software development environment with tools for every project phase. This includes a wide selection of diagnostics for system optimization. You can access extensive target system information via the web with the System Diagnostics Manager. Better still, the controller, drive, communication and visualization are all configurable in one environment, reducing integration time and maintenance costs.

Effortless commissioning
Novolink devices can connect easily to X2OBT9400 with ready-made SFM-CAB-RJTB cables. On one side, the SFM-CAB-RJTB cable has a cable shield clamp which connects to the terminal block (containing all the required wires), while the other side has an RJ45 plug which connects to the SFM1 module. Novolink devices can be connected in a daisy chain with multiple devices working in a sequence by simply using standard Ethernet cables.

Ease of design and commissioning

A closer look at the key benefits

Reduced number of components and simplified wiring
In an increasingly fast-paced world, the need for rapid, effective integration with existing systems is essential.

Simply mount the device on an AF contactor to digitalize operations, without increasing the width of your contactor. Novolink devices are cost-effective and even allow for the retrofitting of an existing 24 V DC supplied AF contactor. In such a case often only the control wiring needs to be changed.

Reduced engineering efforts
An industrial environment is a complex space, which is why Novolink devices were expertly engineered to streamline high-grade motor monitoring and protection. Its out-of-the-box functionality ensures simplicity on the factory floor and beyond.

The standard controls are ready to use without additional engineering and there is no need for expensive specialist cabling or additional training. Programming is drastically simplified because all data is available from a single node representing the feeder. Your motor protection is customizable to the need of your application.

Transform your existing portfolio
Novolink uses standard components like AF contactors, to take your existing solution to another level of innovation. With no need for extensive training, the Novolink opens up new possibilities for your expertise.

Innovation through digitalization

Guiding you on your journey to a digital future

Enhanced analytics for improved performance
Optimize the performance of your machine in real time with data-driven decision making.

The Novolink's fully digitalized approach means that data trends can be analyzed over the long term so processes can be adapted to maximize performance.

Create new business models
With Novolink, you can offer clients digital services like cloud-based predictive maintenance to pinpoint potential faults with speed and accuracy. An increase in overall equipment effectiveness provides added value for your customers.

Enhanced analytics brings machine builders and OEMs closer to their customers and enables more efficient re-stocking via online data.

100% data availability
Through integrated connectivity and seamless integration, relevant information can be derived from raw data.

Integration into other B&R and other syste,s is is easily possible with OPC UA server solutions and other gateways.

Optimized operations and maintenance

Increase your efficiency through innovation

Reduce downtime
Use Novolink's remote monitoring capabilities to reduce costs and increase overall uptime. Operatives can immediately isolate problem areas (such as a malfunctioning load) and suggest solutions before disruption is caused. For ease of use, all control, monitoring and diagnostic signals are fully visible and there is clear fault localization.

Service-on-demand
Avoid unnecessary scheduled servicing by moving from fixed service cycles with Novolink devices. Advanced diagnostic capabilities make it easier to address issues on demand, from switching off idle processes to saving energy through optimizing parameters. You can combine real-time diagnostics with long-term data trend analysis to unlock new service modules.

Enable preventive maintenance
Getting ahead of faults and problems is key to consistent uptimes, maintaining the longevity of equipment and ensuring the ongoing flow of production.

With Novolink, you can set thresholds and receive pre-warnings before equipment failure to reduce energy consumption through optimized operation parameters.

Security, right from the very beginning

With the new Novolink OPC UA smart gateway, you don't have to worry about data security. The protection of your sensitive data and processes has already been considered and integrated into the system from the very beginning.

User role management
SGWX20-OUA supports OPC UA defined "well known roles" for granting tailored access to users.

Password protected
For each user a password must be configurated to prevent unauthorized access to the device. FW-update Updates can only be performed authorized.

Built-in "Always on"-Security
SGWX20-OUA in together with OPC UA Field eXchange is equipped with many security features, that are permanently enabled.

100 % ownership
Access only through pre defined paths and configuration protocols - no default passwords and other backdoors.

Certificate management
Authentication is done through OPC UA defined certificate management.

Smart and safe manufacturing with ABB safety products and B&R solutions

B&R provides industrial automation solutions and is the global center for machine and factory automation within ABB since 2017. B&R offers PLCs with integrated safety for processing lines or machines automated with B&R

Compatible safety products from ABB Jokab Safety

The safety products from ABB Jokab Safety are tested, verified and certified to be connected directly to the B&R safety system. This makes ABB able to offer well-tried and proven safety solutions together with B&R.

Sensors,
switches and locks

Optical safety de-
vices

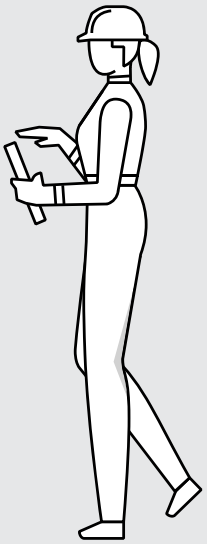
Safe solutions
Reaches the highest level of safety (up to PL e/Cat 4). Certified, verified and reliable safety solutions. Extensive fault detection. Several different types of safety sensors and devices available to suit all safety needs.

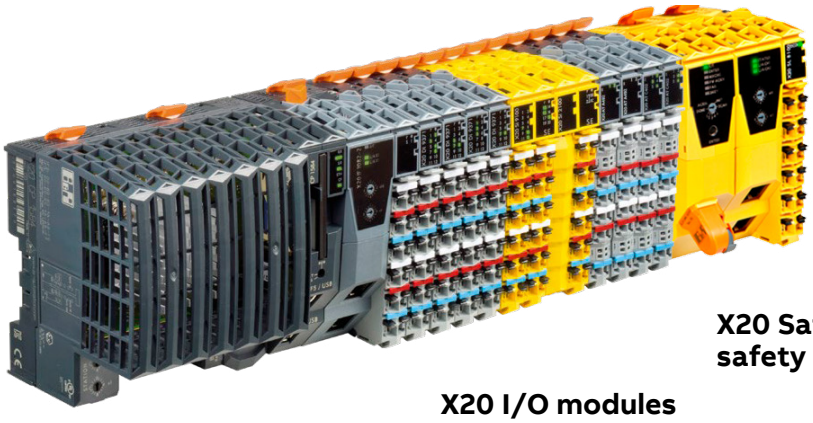
The advantages of DYNlink
The DYNlink signal significantly reduces the required number of cables and safe input channels which leads to more cost-effective solutions.

Developed with installation in mind
Easy connection with M12 connectors. A wide range of adapters and connectors to simplify wairing.
Minimum amount of cabling simplifies installation.

Do you think about safety?

ABB does - find more information on the ABB Jokab Safety offer, details about the products and their applications online.





X20 SafeLOGIC safety controller

X20 I/O modules

X20 CPU

B&R safety controller

In order to supervise ABB safety sensors using B&R controllers the following units are required:

- SafeLOGIC safety controller
- X20 CPU (since the SafeLOGIC is not a stand-alone PLC)
- Safe X20 I/O modules (to connect the safety devices)

Dry contacts (potential free/zero volt)
B&R supports all ABB Jokab Safety products with dry contacts. For this use case, the B&R safe I/O module provides a unique pulse signal which ensures best cable diagnostic.

OSSD
B&R supports all ABB Jokab Safety products with OSSD interface. For this use case, the B&R safe I/O module provides a filter to avoid influencing the application by the OSSD low phase.

DYNlink
B&R supports all ABB Jokab Safety products with DYNlink interface. (Available and TÜV-certified in B&R mapp Safety from version 5.12)

Description

ABB`s Novolink devices consist of the smart function module SFM1 and the sensor module SCV10-40. They allow the remote control and monitoring of AF contactors via X20 bus from within a B&R PLC. The sensor module SCV10-40 is optional and can be connected to the SFM1 module and provides functions for motor and application protection. It provides data for measuring voltage, current, frequency and further derived physical quantities such as cos phi, real power etc.

The SFM1 can be snapped onto AF09...AF96 contactors with 24 V DC coil voltage. The module is equipped with two X2X interfaces for incoming and outgoing connections (daisy chain). The module and contactor are supplied via 24 V DC that are also used for the SCV10-40 module.

Performance data				
Cycle time in contactor module: “switch on signal” received via X2X until contactor control voltage set to 24 V DC			typ. 5 ms	
Update rate of measurement values provided from sensor module and available for X2X communication			typ. 25 ms	

According to the current interpretation of applicable Chinese law the Novolink devices described in this document are imported as industrial automation equipment (they cannot be used without a PLC) and do not need CCC certification.

Technical details
Smart Gateway

General technical data		SGWX20-OUA
Weight		220 g
Typical current / power consumption (complete set without Novolink modules)	24 V DC	200 mA / 4.8 W

For more detailed technical data check the corresponding datasheet from B&R of each part of the Smart Gateway:

Number	Product name	Link
[1]	IO Slice X20BT9400	X20BT9400 datasheet from B&R
[2]	IO Slice X20PS9402	X20PS9402 datasheet from B&R
[3]	Bus controller X20BC008T	X20BC008T datasheet from B&R
[4]	Bus base X20BB80X	X20BB80X datasheet from B&R
[5]	Connector X20TB12	X20TB12 datasheet from B&R
[6]	Bus module X20BM11	X20BM11 datasheet from B&R
