## Low voltage products spare parts

For circuit breakers, Switches, Contactors,  
Arc Guards and Softstartes

**You will find ABB products supporting all applications you can imagine. Approved by local and international standards, the strength of ABB's solutions is supported by our global service network to provide peace of mind.**

**The focus for ABB is to think of the customer's application first. ABB engineers continuously evaluate ways to simplify the installation. Use of an ABB product can improve productivity and machine quality.**

# Introduction

## ABB Service

ABB Service is more than a simple Service!

ABB is a pioneering technology leader for utilities, industries, transportsations and infrastructures.

The company was found in 1988 by the merger between ASEA and Brown Bover & Cie (BBC), two of the most important electrical companies of the last century.

ABB has extensively invested in Service developing advanced solutions aim to guarantee the continuous revamping of products and systems according to the technology progress.

### Spare parts

Spare parts availability is the key of a successful Service!

A spare part is a replaceable product's component fundamental to ensure the functioning of the system to which it belongs.

Having original spare parts always at your disposal means guarantee the highest level of performance to your plant reducing significantly the risk of failure as well as the down-time due to the maintenance.

ABB guarantees a 100 % of compatibility of all Spare parts that are going to replace the defective components of your equipment.

All Spare parts are equipped with instruction sheets to enable a correct and safety assembly and are delivered in short times in order to fulfill customer's needs.

# Introduction

## Service for low voltage products

ABB provides a full range of low voltage solutions to connect, protect, control and measure electrical installations, enclosures, switchboards, electronics and electromechanical devices.

Low voltage service portfolio includes a wide range of solutions resulting from the research and realized in order to keep your plant operating reliably and efficiently.

### Retrofitting kits

When repairing an asset is no longer possible or convenient, ABB offers standard and advanced Retrofitting solutions consisting in the addition of new technologies or features to the existing systems in order to upgrade and to enhance your devices.

### Maintenance

ABB Service presents different maintenance solutions with the aim to ensure the continuous operation of your plant.

ABB offers corrective and preventive maintenance programs as well as predictive maintenance tools developed to guarantee a relevant reduction of the total cost due maintenance and repairs.

### Training

ABB Service performs accurate training sessions intended to supervisors, technicians, engineers, users and maintenance workers aim to teach how to respond rapidly and efficiently in different critical situations.

ABB's training courses are opened to customers, partners and own personnel.

### Spare parts

Spare parts for our products are available in every moment and, in accordance to the difficult of the replacement process, can be applied by customers or by ABB's technical experts. In the first case, ABB Service provides specific mounting instructions.

### Replacement

ABB offers the possibility to replace own products with completely new ones.

ABB Service guarantees a total availability of a product as long as it is in the Classic phase of the Life Cycle Management and a partial availability during the Limited phase.

More details of the Life Cycle Management of ABB products are explained in the next paragraph.

Our competent network of service units is spread around the world and is always ready to ensure the satisfaction of your demands with the utmost care.

# Introduction

## LCM

### LCM

Every year, ABB SACE reviews the Life Cycle Management policy (LCM) for every product and publishes information on the exact product's phase. There are 4 phases: Active, Classic, Limited and Obsolete.  
 (For more details visit our website: <http://new.abb.com/service/lifecyclemanagement>)

- Active** = standard development, production and sale.
- Classic** = maintenance phase of the product: spare parts availability is guaranteed for replacing in existing plants.
- Limited** = spare parts are available. The production of the CB's whole range is not guaranteed and the technical support is limited.
- Obsolete** = technical support is no more guaranteed. The production of the CB's whole range has ended but spare parts might be available. Retrofit solutions are available.

# Circuit-breakers

ABB SACE means quality and innovation inside the low voltage world. ABB has celebrated success with various ranges of air (ACB) and moulded case (MCCB) circuit-breakers by the acquisition of SACE (Società Anonima Soluzioni Elettromeccaniche), a market leader in low voltage circuit-breakers that was founded in 1918 in Bergamo – Italy. ABB circuit-breakers have been designed to be adapted in different utilizations, such as industrial and naval applications, power generation installations, buildings, data center and shopping centers.

These devices ensure high performances, safety and guarantee an easy replacement of components. The continuous functioning of every single circuit-breaker is essential for all its applications and ABB Service is constantly looking to efficient solutions in order to maintain customer's devices. The table below shows all the service solutions for circuit-breakers that are currently available.

# Circuit-breakers

With the integration with General Electric at the end of 2018, new devices are now part of ABB portfolio and, consequently are supported by ABB in terms of maintenance and spare parts.  
ABB announced the finalization of the acquisition

of GE Industrial Solutions (GEIS), GE's global electrification solutions business, on June 30, 2018. In this regard, in this document there is also the spare parts list of the last GE air circuit breakers: Mpact, EntelliGuard G, EntelliGuard L.

## Retrofitting kits

### Retrofitting kits

ABB offers three different solutions to retrofit your circuit-breakers: Hard Bus Retrofill, Cradle in Cradle, Direct Replacement.

**Hard Bus Retrofill:** This solution is a complete substitution of the old circuit-breaker.

The kit consists of:

- special adapter copper bars to connect the terminals of the new circuit-breaker to the busbars designed for the old breaker;
- where the dimension of the new circuit-breaker is more compact, an insulating layer is added, as part of the solution, to create shield for the live electrical parts;
- Adhesive template and metal adapters to facilitate panel door cutout.

ABB SACE offers even more advanced retrofitting solutions for withdrawable version circuit-breakers. The fixed part of the old circuit-breaker is not removed\*:

For more details, visit our website <http://new.abb.com/low-voltage/service/service-breakers-switches/extensionupgrades-and-retrofits>) and it is necessary to check panel dimensions especially if there are external devices like heating elements, wiring accessories, fuseholders, CAM switches, etc.

**Cradle in Cradle:** modifications are made to the fixed part of the old circuit-breaker that usually has bigger dimensions. A special fixed part for the new circuit-breaker is mounted into the old fixed part, so that the standard moving part of the new circuit-breaker can be easily racked in and out.

Before choosing any of the advanced solutions, it is necessary to verify that the fixed part is in good conditions: if it is irrevocably broken, it must be substituted. See our Fixed part checklist document (1SDH001279R0002).

**Direct Replacement (DR):** This is the most advanced solution for the end user which requires the shortest downtime for replacement: the moving part of the old circuitbreaker is removed and a special moving part of the new circuit-breaker is suitably modified and tested to fit into the existing fixed part. This implies very short plant shutdown of the single user. The kit, pre-mounted by ABB SACE, changes the fixed circuit-breaker into a proper moving part to be fitted into the existing fixed part. The only other work that needs to be completed is the cutting of the switchboard panel to suit the size of the new breaker. All standard accessories are already precabled.

## Spare parts

ABB Service continuously ensures that Spare parts are available to support customer during maintenance activity.

**Management:** Every time that a new circuit-breaker family is launched ABB defines the list of spare parts to facilitate the customers during maintenance activity. During the product life new spare parts can be defined to upgrade the components of the circuit-breakers.

**Product Quality:** ABB provides guaranteed and genuine spare parts with all the components tested and equipped with instruction sheets to enable a correct and safety assembly.  
The spare parts are classified in "Type A" and not "Type A".  
A lot of ABB original spare parts can be easily replaced by the equipment owners. However there are some parts which require more complex, and/or potentially dangerous installation procedures. There last are categorized "Type A" and can only be replaced by qualified ABB technicians who possess the correct tools and competences.  
The technicians take part of the Service Network which is accessible to you.

**Efficiency:** all spare parts are delivered in a short time to fulfil customer's needs.

**Only for GE product:**

- 3 - Operating mechanism
- 4 - Closing spring
- 6 - Kit Jaw contacts UL
- 7 - Moving part Terminals
- 18 - Right plate for accessories (Right MID)
- 20 - Racked in and out device (CD)
- 21 - Spring Charging lever
- 24 - Conversion kit from automatic into switch-disconnector MS
- 29 - Conversion kit from fixed to moving part
- 31 - Conversion kit from moving part into fixed version
- 32 - Signalling charged spring lever
- 34 - Measuring chain - Main board + Sensors + cables for Trip unit M3 - Grey platform
- 35 - Measuring chain - Main board + sensors + cables for Trip unit M4 - Black platform
- 37 - Terminal box fixed part
- 38 - Support for terminal box of fixed part
- 40 - CD lock lever
- 41 - Lateral guides for fixed part
- 42 - Tripping mechanism
- 44 - Spring charging device
- 46 - Standard maintenance kit

This kind of spare part requires an ABB level 3 certified field service engineer.  
Please contact your ABB local service organization for further information.

\* Check the Serial Number before ordering.

After serial number BM41037654, Emax E2.2 IEC versions changed their arching chambers to the one used for E2.2 UL versions.

After serial number BM31123914, Emax E4.2/E6.2 IEC versions changed their arching chambers to the one used for E4.2/E6.2 UL versions.

Min quantity = min quantity to complete a circuit-breaker: The quantity is related to the number of phases (3 or 4 poles) of the circuit-breaker (E6.2 has half phases so quantities are double)

## ACB Spare parts - New Emax E1, E2, E3, E4, E6

### TYPE A:

- 1 - Single phase pole
- 3 - Operating mechanism
- 4 - Closing spring
- 10 - Not programmed Measuring chain - Part 4/4
- 13 - Spring charged flag set
- 14 - Closed door withdrawing mechanism (CD)
- 28 - Conversion Kit from fixed version to moving part
- 29 - XK3 cable PR122-PR123
- 30 - XK2 cable PR122-PR123
- 31 - Standard maintenance kit
- 32 - Lateral guides for fixed part
- 33 - Spring charging device

This kind of spare part requires an ABB level 3 certified field service engineer.  
Please contact your ABB local service organization for further information.

## MCCB Spare parts - Tmax T7, T7M, New Emax X1

### TYPE A:

#### 1 - Opening solenoid for electronic overcurrent release

This kind of spare part requires an ABB level 3 certified field service engineer.  
Please contact your ABB local service organization for further information.

#### 2 - Extended operating lever + lucid plate

Size	Poles	Version	IEC/UL	Code	Min quantity
T7	3p/4p	F; W (MP)	IEC/UL	1SDA069236R1	1

#### 3 - Fixing screws

# Switches

Providing spare parts for our products guarantees that our customers will be able to minimize unwanted down-time of their processes.

ABB has a wide range of low voltage switches with ratings between 16 and 4000 Amperes. ABB's offering includes diverse fusible and non-fusible solutions suitable for numerous applications that can be operated manually, remotely or automatically.

In particular, our portfolio includes switch-disconnectors, switch fuses, change over and transfer switches, enclosed switches and cam switches. ABB have launched the first low voltage switch in 1970 and today offers spare parts suitable for the latest version of motorized change over switches.

### Controller module

Including the controller module for TruONE ATS.

Please provide the full TruONE part number (one example OXB250E3S3QB) when ordering as the controller module will be pre-configured at the factory.

Important notice: Firmware update of the HMI module might be required when replacing the controller.  
Please consult ABB for more details.

### Complete mechanism

Including the complete mechanism with power module, controller module and I/O terminal cover. HMI module must be ordered separately if needed. Please provide the full TruONE part number (one example OXB250E3S3QB) when ordering as the controller module will be pre-configured at the factory. Important notice: Firmware update of the HMI module might be required when replacing the controller. Please consult ABB for more details.

It's recommended to replace the complete mechanism in case there's a need for replacing the power module or controller module as it's easier to replace the complete mechanism instead of replacing individual modules.

# Contactors

—

ABB has developed contactors for over 100 years and has continuously pushed the limits of the technology.

ABBs contactors initially were produced by CEM (Compagnie Electro Mecanique), a company founded in Paris in 1885 that built its first factory in Le Havre in 1895. CEM was a subsidiary of Brown Boveri & Cie and its activities were engineering and production of Electrical machines. Primarily designed only for motor starting applications, ABBs versatile contactors are today installed in a wide range of applications, from railway to wind power. Featuring AF technology as standard, the latest range of ABB's contactors establishes a new industry benchmark. The electronically controlled coil offers multiple benefits over conventional alternatives, and together with ABB's wide product offering – an optimal configuration, every time.

### Surge suppressors for contactor coils

#### Description

The operation of inductive circuits causes overvoltages, in particular on opening of the contactor coil. The electromagnetic energy stored in the coil during contactor closing is restored on opening in the form of surges, the slope and amplitude of which may rise to several kilovolts. A number of drawbacks are observed ranging from interference on the electronic devices to breakdown of insulators and even destruction of certain sensitive components. The graph opposite reproduces the oscillogram showing voltage discharges at the terminals of a 42 V / 50 Hz coil without peak clipping. The coil was switched by 8 series-connected poles of a contactor relay.

Following a burst of discharges with a very steep slope a damped oscillation emerges with a peak value of 3500 V.

#### Overvoltage Factor

The overvoltage factor  $k$  is defined as the ratio of the maximum overvoltage peak value  $\hat{U}_s$  to the peak value  $\hat{U}_c$  of the coil rated control voltage  $U_c$ :

$$k = \frac{\hat{U}_s \text{ max.}}{\hat{U}_c} \quad \text{in DC: } k = \frac{\hat{U}_s \text{ max.}}{U_c} \quad \text{or in AC: } k = \frac{\hat{U}_s \text{ max.}}{U_c \sqrt{2}}$$

For example the following is obtained for the above graph:  $k = \frac{3500}{42 \sqrt{2}} \approx 60$

To reduce the harmful effects of these overvoltages, ABB has developed a range of surge suppressors designed to reduce the  $k$  factor defined above and to limit or even completely eliminate the high pre-damping voltage frequencies.

Each case is different, but the technical data tolerances and the generous sizing of parts have enabled us to reduce the number of variants.

We have chosen the following solutions: transil diodes, varistors and RC blocks.

Note: A varistor is a resistor whose value decreases to a very large extent when a certain voltage is applied at its terminals.

## Auxiliary contact blocks

### Description

The auxiliary contact blocks are used for the operation of auxiliary circuits and control circuits.

Types of auxiliary contact blocks for standard industrial environments:

- CAL instantaneous with N.O. + N.C. contacts
- CCL N.O. leading contact + N.C. lagging contact.

The auxiliary contact blocks are equipped with screw type connecting terminals delivered open, protected against accidental direct contact, and bear the corresponding function marking.

Mounting: Screwed onto the right and / or lefthand side of the EK110 ... EK1000 contactors.

# Softstarters

## Motor starting matters

ABB's softstarters increase a motor's lifetime by protecting it from electrical stresses. They do so by letting you optimize starting currents that with conventional starting methods put lots of stress on the motor. With many built-in motor protection features, your motor is safe in its hands. ABB's softstarters are also installation-friendly and can cut your assembly and startup time by being easy to use and easy to learn.

With everything that you need in one unit, from bypass contactor to overload protection, a single softstarter makes for a compact and complete starting solution. Furthermore, with many application specific features, ABB's softstarters can ultimately help you increase productivity. Torque control, pump cleaning and many more features let you do more than simply softstarting.

## Motor starting matters

You're in control of every life cycle phase of your softstarter. This table defines the services recommended and available throughout softstarter lifespan.

- Secure motor reliability
- Improve installation efficiency
- Increase application productivity

### Legend of the column titles

<b>For softstarter type</b>	The softstarter type the spare part is intended to
<b>Name</b>	A short description of the spare part
<b>Pcs per softstarter required</b>	The amount that is required for one softstarter
<b>Pcs/softstarter unit</b>	The amount that is delivered per type code
<b>Type</b>	The type code of the part
<b>Code/ID</b>	The global catalog number
<b>Weight/pkg</b>	The total weight of the package
<b>Main voltage</b>	If this is specified, it means that the part can handle the specified voltage. Otherwise, it will be applicable for all softstarters for this particular model and size.

**Example 1:** The cooling fan with ID 1SFA899215R1040 and type code PSFA-40 is delivered individual. If all three should be replaced, please order 3 x 1SFA899215R1040

**Example 2:** The thyristors in a PSTX470 for 600 V need to be replaced. The pkg quantity is 2, and the pcs per softstarter required is 6. If all thyristors should be replaced, 3 x 1SFA899211R2880 should be ordered.

<sup>1)</sup>Note: There are two different PCBA's for PST(B): One high voltage and one low voltage. It is recommended to replace both cards if a replacement is done. There are also two versions of each card: coated and non coated. The coated board is more resilient against harmful airborne particles.
