

# Gemini. The new resistance.

Flexible thermoplastic enclosures  
for harsh environments.

- High degree of protection for harsh outdoor environments
- Easy to install
- Flexibility and Strength

---

**Durability and resistance are crucial for the protection of your control panel infrastructure.**

**Thanks to the co-injection technology, Gemini thermoplastic enclosures guarantee excellent performance, great resistance to chemicals, IP66 protection and continuous operation in any environmental context, even in particularly severe operating conditions.**

---

# Automation and multi purpose enclosures

## Strong outside and versatile inside

Whether you are near the sea or close to a swimming pool, from scorching to icy temperatures, in a dusty, dirty and harsh environment, Gemini insulating enclosures fully protect the integrity of your control panel infrastructure.

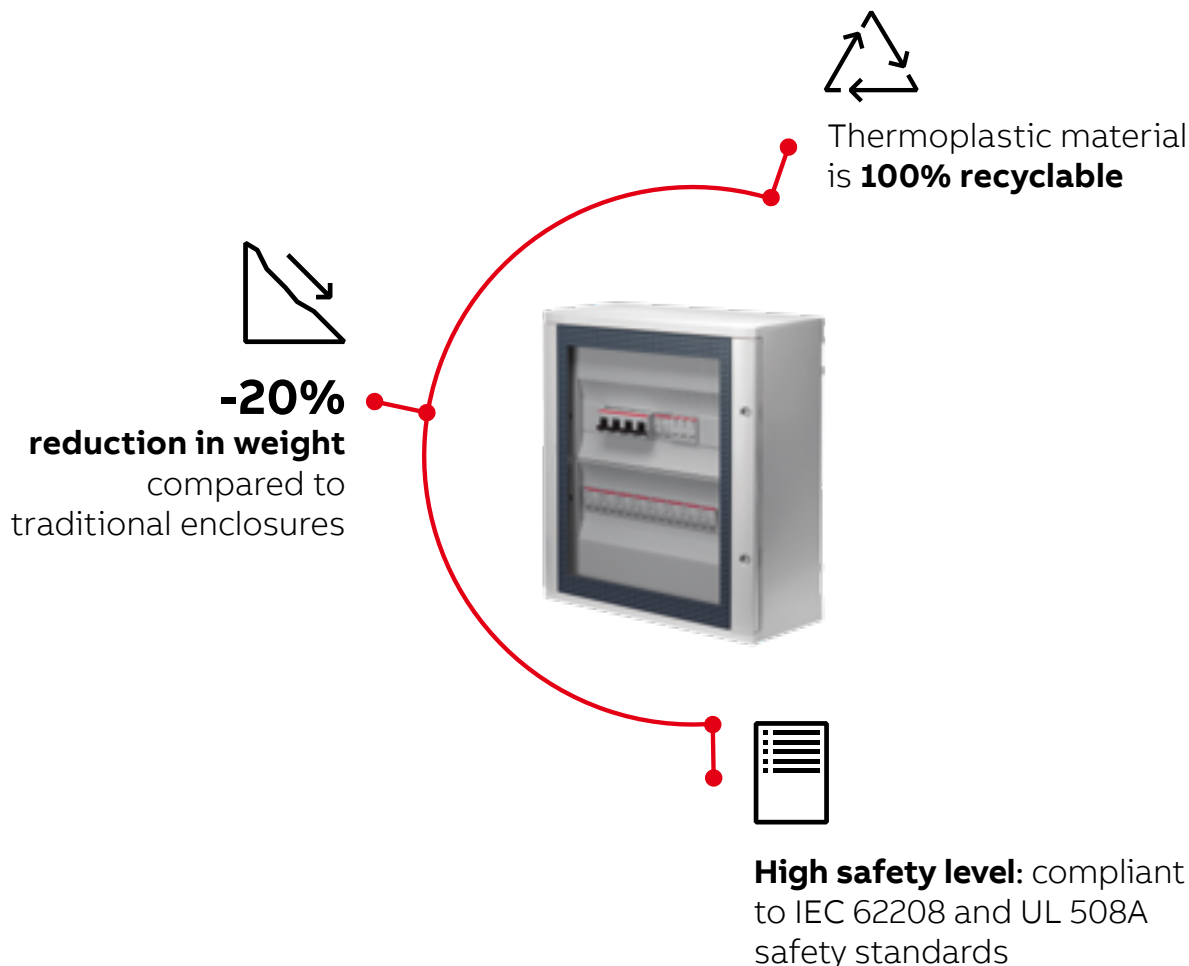

ABB's Gemini thermoplastic enclosures are designed for use in demanding environments since they are resistant, durable and extremely sturdy.

Moreover, they are developed according to current international regulations and standards, in order to provide a safe solution to meet our customers' requirements.

In particular, Gemini complies with IEC 62208 and UL 508 safety standards and it guarantees IP66 degree of protection from infiltration of any solid bodies, even those which are extremely small like dust particles or grains of sand as well as protection against harmful water and humidity.

In addition to this, Gemini retains its characteristics for a long time since it is not subject to corrosion by chemical or atmospheric agents. According to test performed on:

- Saline environments (IEC 60068-2-52)
- Weathering (IEC 60068-2-5)
- Permanent sun exposure (IEC 60068-2-5)

01 From left to right:  
SRX, Gemini and SR2  
enclosures

ABB can offer a complete, integrated range of enclosures for electrical distribution safety and reliability which guarantees the protection of people and assets.

SR2, SRX and Gemini are the most resistant range of enclosures: reliable in extreme conditions and suitable for outdoor installations thanks to the special mechanical properties of stainless steel and plastic material.

Gemini's plastic enclosures, combined with the SR2 and SRX metal enclosures, represents the perfect solution for all the installation needs for automation, control & command and distribution applications.

Designed for harsh  
environments

Types  
1, 3R, 4, 4X, 12

Eco-compatible  
materials

## Gemini: the improved range

Robust and flexible thermoplastic enclosures

Six different box sizes with internal space which accommodates from 24 to 216 DIN modules

Opaque or transparent doors, opening at more than 180°.

A single handle operates the door closing mechanism and it can be ordered separately.

Gemini is compliant to IEC62208 and UL 508A standards. IP66 certifies Gemini is completely protected against the infiltration of solid bodies and is resistant to the penetration of jets of water similar to sea waves.

High resistance: flexible and extremely sturdy. Resistant to harsh environments, chemical and atmospheric agents.

Suitable for outdoor installations, in any operating conditions: IP66, IK10, GWT=750°C, -25°C to 100°C

### Easy to install

Ready-to-use solutions are available to quickly install all the devices without using tools.

### High degree of protection

Extremely sturdy, even against 20 joules impact, dust and water jets (IK10 and IP66 degree of protection), able to operate in a wide range of temperatures (25 up to 100°C), exceptionally resistant to UV and chemical agents and compliant with IEC 62208 and UL 508A standards.

### Adaptable to customers' requirements

Available in 6 sizes and with transparent or blind door, with full metal and plastic base plates. Gemini can be used even in very difficult application circumstances and extreme weather conditions.

### Eco-friendly

Thanks to co-injection technology, Gemini's thermoplastic not only ensures sturdiness, mechanical features and resistance to oils but it also reduces at the same time the environmental impact at the end of its useful life since it's 100% recyclable.

### The thermoplastic co-injection molding process

It's like a "sandwich" of two materials: a compact external covering and an expanded core. This technology ensures the highest level of mechanical protection against impacts (IK10).

---

## Easy to install

# Versatile and simple. To meet any application.

Offering the best technology for more reliable energy distribution solutions, by protecting people, equipments and resources.

ABB's Gemini enclosures provide a real system of integrated and complementary functions making them configurable into different applications: for automation, distribution and combined automation and distribution.

Gemini is designed to be perfectly compatible with ABB components for low voltage control and monitoring. In mixed applications, the Gemini enclosure is designed to be fitted with System pro M modular devices and Tmax XT moulded-case circuit breakers. To respect safety standards, all the enclosure components are easy to fit and can be fixed to the base plate or to the box frame without using any tools.

Wiring operations are carried out from the front followed by snapping the base plate or the distribution frame onto the box.

The patented frame is fitted with the cable duct incorporated in the uprights.

For control and command applications, three typologies of base plates are available: standard metal, perforated metal and insulated.

Lightweight thermoplastic material makes handling operation easier compared to traditional enclosure, for easier handling.

- Few parts: **snap-on fixing, no tools needed**
- **Pre-assembled hinges**
- Door with **180 degree rotation**
- Frame with **integrated vertical wiring duct**
- Frontal cabling: **comfort in the wiring process**
- **A wide range of accessories for automation and distribution applications**

---

Gemini is also flexible thanks to six different box sizes and internal space to accommodate from 24 to 216 DIN modules.

—  
01 Gemini doors open at an angle of more than 180° giving easy access to the devices installed inside the switchboard.

—  
02 No tools are needed for installation. The doors hook onto the hinges with special hinge pins and are reversible.

—  
03 The frame can be extracted to make wiring operations easier at the workbench.

—  
04 The fixing hooks supplied in the standard versions are applied without having to use tools.

—  
05 Fixing hooks and feet allow the frame to be snap-mounted inside the box.

# High degree of protection

## Designed to operate in harsh environments

Gemini is developed and designed by ABB together with the direct collaboration of panel builders, installers and designers in order to create insulating enclosures to better face extreme weather conditions.

Gemini represents the best solution for both distribution and automation (control and command) applications.

For a valid enclosure, the degree of protection is an important factor. Gemini thermoplastic enclosures are totally protected against the infiltration of solid bodies thanks to an IP66 degree of protection (IP30 with the door open and with the appropriate components installed) and a double insulation, even in the event of indirect contact.

—

They are suitable for environments with extreme temperatures, in outdoor applications and severe conditions.

Thermoplastic material retains its characteristics for a long time since it's not subject to corrosion from chemical and atmospheric agents such as dust and sand. In Mining or Construction applications as well as manufacturing plants, Gemini withstands harsh chemicals with high levels of performance.

Typical examples of some Gemini applications can be seen in Manufacturing sites, Solar power plants, greenhouses, chemical plants and in any other environments where distribution and automation demand specific safety requirements and service continuity.

It is particularly recommended in photovoltaic and greenhouse applications, also because of its strong resistance to UV rays.

- **IP66 degree of protection** (IP30 with the door open and with the appropriate components installed)
- **Double insulation from dust and water jets**, even in the event of indirect contact
- Adaptation to environments with extremely high or low temperatures (**-25°C to 100°C**), in outdoor applications and in severe conditions
- **Resistance to aggressive chemical agents and UV radiation**
- Resistance to fire and abnormal heat (**GWT up to 750°C**).
- Insulation Voltage: **1000 Vac; 1500 Vdc**
- UL Type **1, 3R, 4, 4X, 12**

#### Additional tests completed

- Dust/sand resistance (factory internal tested)
- Saline environments (according to IEC 60068-2-52)
- Weathering (according to IEC 60068-2-5)
- Permanent sun exposure (IEC 60068-2-5)

---

## Photovoltaic

In a typical photovoltaic plant the direct current section comprises a generator consisting of strings composed of photovoltaic modules connected in series. The Gemini series of IP66 enclosures are ideal for use as field combiners or as parallel switchboards, i.e. for outdoor installation near the modules. ABB has a range which is currently unique on the market, and has developed a family of plug & operate solutions, i.e. a series of finished, wired and certified switchboards to meet the needs of a huge range of plant types: from single string for residential applications to large-scale solar fields (for more information see specific documentation on [abb.com](http://abb.com)).

## Adaptable to customers' requirements

Widest range and numerous accessories for a complete solution

With Gemini, you can benefit from a wide range of enclosures with different dimensions and the possibility to arrange the devices into the DIN-Rail as you need. Moreover, Gemini enclosures have a wide range of accessories for both automation and distribution applications, ensuring maximum versatility and integration.

### Accessories

- Various locking systems can be installed (triangular, squared, with handles and ciphered type)
- Ventilation and anti-condensation kits: protecting devices from the effects of heat and humidity
- Wall brackets, pole mounting kit and pedestal make it easier to install the enclosures in any context.
- Kit for installing Tmax XT circuit-breakers
- The universal drill bit can be used to create the holes to install the cable glands for cable derivations
- Doors with single central handle (as per picture beside) can be fitted with half cylinder locking systems and/or padlock

—  
01—  
02—  
03

—  
01 Doors with central single handle are also available.

—  
02 Wall-mounted installation is possible using the special mounting brackets.

—  
03 ABB logo with its minimal graphic design fits well to hinged doors.

—  
04 Pole-mounted or mounted on a special pedestal installation is also possible.

—  
05 The standard double-bit locks supplied can be replaced by the version with ciphered key and handle or with square or triangular impression.

—  
04—  
05

# Components for automation applications

Gemini enclosures are designed to be perfectly compatible with ABB components for low voltage control and monitoring.

For these applications they can be equipped with modular devices belonging to the System pro M range, with Tmax XT moulded-case circuit-breakers and control and signaling devices, creating a truly integrated automation system. When deciding the Gemini layout for control and command applications, you can rely on base plates available in three versions (metal, perforated metal, insulated). base plate in one of the three versions in the range.

After wiring with the ducts and the Fix-O-Rapid device, the special standard adjustable feet and hooks must be fitted onto the base plate, allowing it to be inserted inside the box at up to seven different depths and three further levels of adjustment: no tools need to be used to carry out these operations. To finish the job, the inner door can be mounted (reversible and in insulating material), guaranteeing IP30 degree of protection when the switchboard door is open.

No tools are needed unless the inner door is equipped with buttons, warning lights, etc.

01

01, 02 and 03 Example of the configuration of a switchboard for an automation application: some ABB control and protection devices are installed on the plate. The inner door is fitted with light-signaling devices.

02

04 The feet supplied in the standard versions is applied without having to use tools.

03

04

# Components for distribution and mixed applications

In distribution and mixed applications, the Gemini enclosure is designed to be fitted with System pro M modular devices and Tmax XT moulded-case circuit breakers. The frame is the load-bearing element of the configuration: DIN-rails, partial modular plates and the special Tmax XT mounting and cabling kits are snapped onto the uprights. All the components can be adjusted to six different depths with a pitch of 12.5 mm and arranged at heights with standard installation pitch of 150, 225 and 300 mm and a distance of 75 mm between the rows.

Blank or windowed front panels are applied to protect the equipment and these can be hinged onto both sides; the cables are housed inside the vertical wiring duct integrated in the uprights according to an exclusive ABB patent. Wiring is carried out by pulling out the frame and working from the front; the ergonomic grip and the standard feet and snap-on hooks supplied make it easy to insert it inside the enclosure after the job is finished.

01

01 Fixing hooks and feet allow the frame to be snap-mounted inside the box.

02

02 The DIN-rail is supplied with special hooks already in position for attaching to the uprights.

03 The depth at which the DIN-rail, the modular plates, the kit for fixing the Tmax circuit breakers and the wiring duct are positioned can be adjusted with a simple sliding movement.

03

04 The blank and drilled panels are hinged onto both sides; the description of the installed components can be kept in the special compartment protected by a transparent, hinged flange.
