WavePro-II

Low Voltage Busway

- Unparalleled safety and protection measures
- Wide range of designs meeting customer's stringent requirements
- Lower installation and maintenance costs

ABB WavePro-II low voltage busway is a compact design, featuring high quality copper busbars and low temperature rise. All-aluminium housing and sandwich structure provides perfect heat dissipation performance, high level of mechanical strength and corrosion resistance.

ABB WavePro-II series busway is suitable for a broad range of low voltage applications such as medium and large commercial buildings, factory and critical public facilities.

WavePro-II Busway Overview

WavePro-II low-voltage compact busway features rated currents from 400A-6300A, the ability of providing a neutral busbar with 100% and 200% capacity, and has two options available: 50% integrated housing PE and 50% internal PE, which can meet the requirements of various power distribution systems.

The ingress protection grade is up to IP65, suitable for indoor application, the users can select according to the installation environment.

Technical Data

Standards	IEC 61439-1 2011: LV switchgear and control gear assemblies – Part 1: General rules IEC 61439-6 2012: LV switchgear and control gear assemblies – Part 6: Busbar trunking systems (busways)
Test certificates	KEMA KEUR
Electrical data	
Rated frequency (fn)	50 / 60Hz
Rated current (InA)	400A - 6300A
Rated short-time withstand current (Icw)	30kA / 1s - 120kA / 1s
Rated peak withstand current (Ipk)	63kA - 264kA
Rated operational voltage (Ue)	690V
Rated insulation voltage (Ui)	1000V
Rated impulse withstand voltage (Uimp)	8kV
Construction	
Construction	Sandwich busway
Degree of protection - Busway	Feeder: IP41, IP54, IP65 Plug-in: IP41, IP54
Degree of protection - Tap-off unit	IP41, IP54
Housing	aluminium alloy
Busbars	Cathode copper Tin plating over full length, silver plating as an option
Main insulation material	Polyester film (PET), Class B
Resistance to flame propagation	KEMA report
Fire resistance in building penetration	240 min, KEMA report
Service conditions	
Ambient air temperature – Lower limit	Indoor: -5 °C
Ambient air temperature – Upper limit	40 °C
Ambient air temperature – Daily average maximum	35 °C
Maximum relative humidity	Indoor: 50 % at 40 °C
Pollution degree	III
Altitude	≤ 2000 m

Product Features

Busway construction

- The housing is made of an aluminium alloy profile which is low magnetic material and effectively minimizes the hysteresis loss during busway energisation
- The aluminium alloy profile has excellent heat dissipation performance, ensuring the maximum temperature rise of the busway not exceeding the limit at rated current
- The housing is powder coated and has been tested to withstand 1000 hours of salt fog test
- Optimized housing design, compact structure, stronger busway overall protection

Busbars

- The polish-saw process is used to cut the conductors to ensure a high quality bar end finish. This process is better than cutting and avoids secondary damage to insulation materials
- The conductor is machined and then tin-plated

Reliable insulation material

- WavePro-II busway is wrapped with two layers of polyester film as insulation, insulation level is class B
- Prior to the busway leaving the factory it is tested to withstand 3750V AC high voltage, which ensures 100% qualified insulation performance

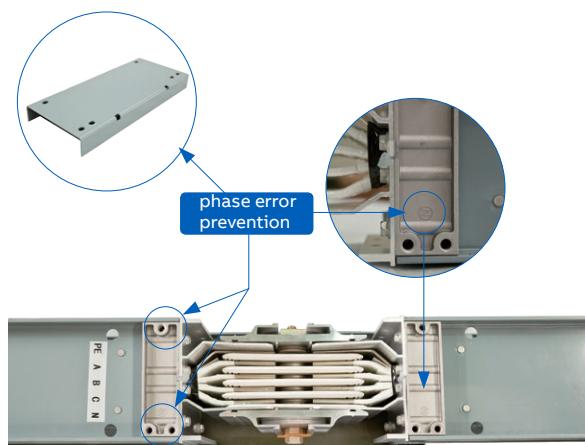

Joint

- It has a stopper mechanism which ensures quick and reliable joint installation
- It uses the double-headed torque limiting joint bolt, with standard tightening torque of $70 \pm 5\text{ N}\cdot\text{m}$. When the bolt is properly tightened with required torque, the orange identification label is released naturally
- Each joint has a +/- 4mm adjustment range to compensating for the length change due to thermal expansion

Degree of protection

- Standard IP ratings include: IP41/IP54/IP65 (feeder busway), IP41/IP54 (plug-in busway), IP41/IP54 (plug)
- The plug outlet protection module is embedded with waterproof silicone rubber. The joint is protected with an all-round protection cover plate suitable for the busway of IP54 or above
- Suitable for indoor application

Busway phase error prevention mechanism

- Aluminium cast terminal of the busway is of asymmetrically fixed hole construction, and it combines with joint cover to effectively prevent phase error

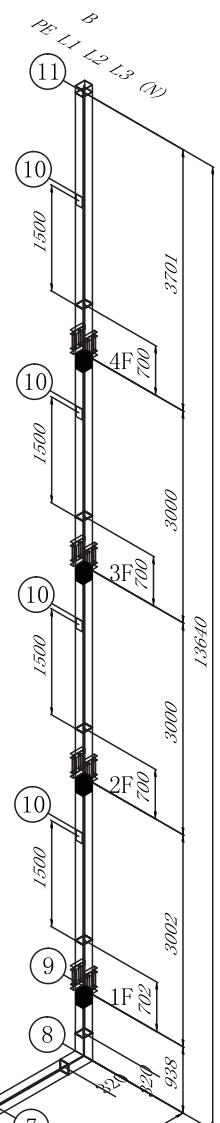

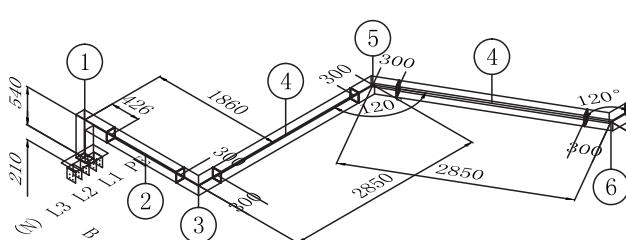

BDM Software

BDM is a software dedicated for WavePro busway routing design, segmentation and BOM generation.

BDM built in detailed busway product parameters and related design standards, seamless integration with ERP system:

- 3D layout generation (direct drawing or generate from polyline)
- Non-standard unit customization
- Wall / floor setting up
- Tap-off units, hangers and customized units' insertion
- Busway segmentation automatically or manually
- Labeling
- BOM output

Electrical Data

Ground resistance

WavePro-II busway all-aluminium housing provides excellent integrated housing ground path, with the equivalent grounding capacity more than 50% of capacity. An internal ground bus bar (50% capacity) is also available to meet customers' special needs.

Ground resistance (DC)

($10^{-6}\Omega/m$) @ ambient temperature of 20°C

No.	Rated current	50% housing ground	50% internal ground
1	400	46.5	148.3

11	5000	9.1	14.1
12	6300	6.3	11.8

Voltage drop

WavePro-II busway features low voltage drop. High-purity copper conductor provides extremely low resistance. The aluminium housing designed with compact sandwich construction and low magnetic materials can minimize the conductor reactance. Electrical impedance and voltage drop data of the busway straight lengths are shown below. The following data is for a 50Hz systems, for 60Hz applications multiply the Reactance by 1.205, there is no change to the Resistance. For distributed loads when using plug in busway, the voltage drop is divided by 2.

[Data source: calculation]

Rated Current ¹	Rated short-time withstand current (Icw)	Rated peak withstand current (Ipk)	20°C		100% Rated Load/steady state (50Hz), 20°C Amb.					Line-to-line voltage drop (V/m) - Concentrated load, 20°C Amb. ²

Note:

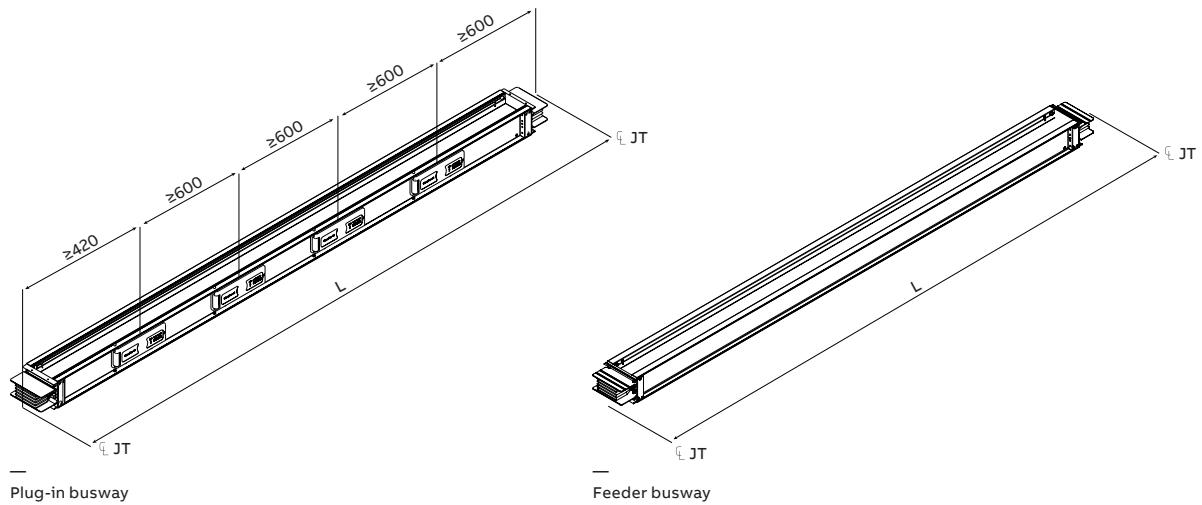

1. With an average ambient temperature of 35°C, the busway can continuously operate at rated current. If the busway is continuously operated at higher ambient temperature, please contact with local ABB office.

2. Concentrated load: Voltage drop = $\sqrt{3} I (R \cos\Phi + X \sin\Phi)$ Distributed load: voltage drop = $[\sqrt{3} I (R \cos\Phi + X \sin\Phi)]/2$

To determine Actual voltage drop = Voltage Drop from Table x actual load/rated load

Physical Data

Straight lengths

Feeder busway minimum length is 400mm, maximum length is 3000mm. Other lengths can be customized. Plug-in busway with 1 plug outlet, the minimum length is 720mm. The outlet is set in the center.

Both sides of the plug-in busway can be customized with plug outlets. For the busway with standard length of 3 meters, one side can be customized with up to 4 outlets.

Physical Data

Transformer Connection

For the mechanical connection between busway and transformer outgoing bar on low voltage side, the busway flange end, flexible connection and connecting copper bar are needed. The flexible connection is to isolate the vibration from transformer. The connecting copper bar shall be made locally according to the specific size measured on site, and provided by users.

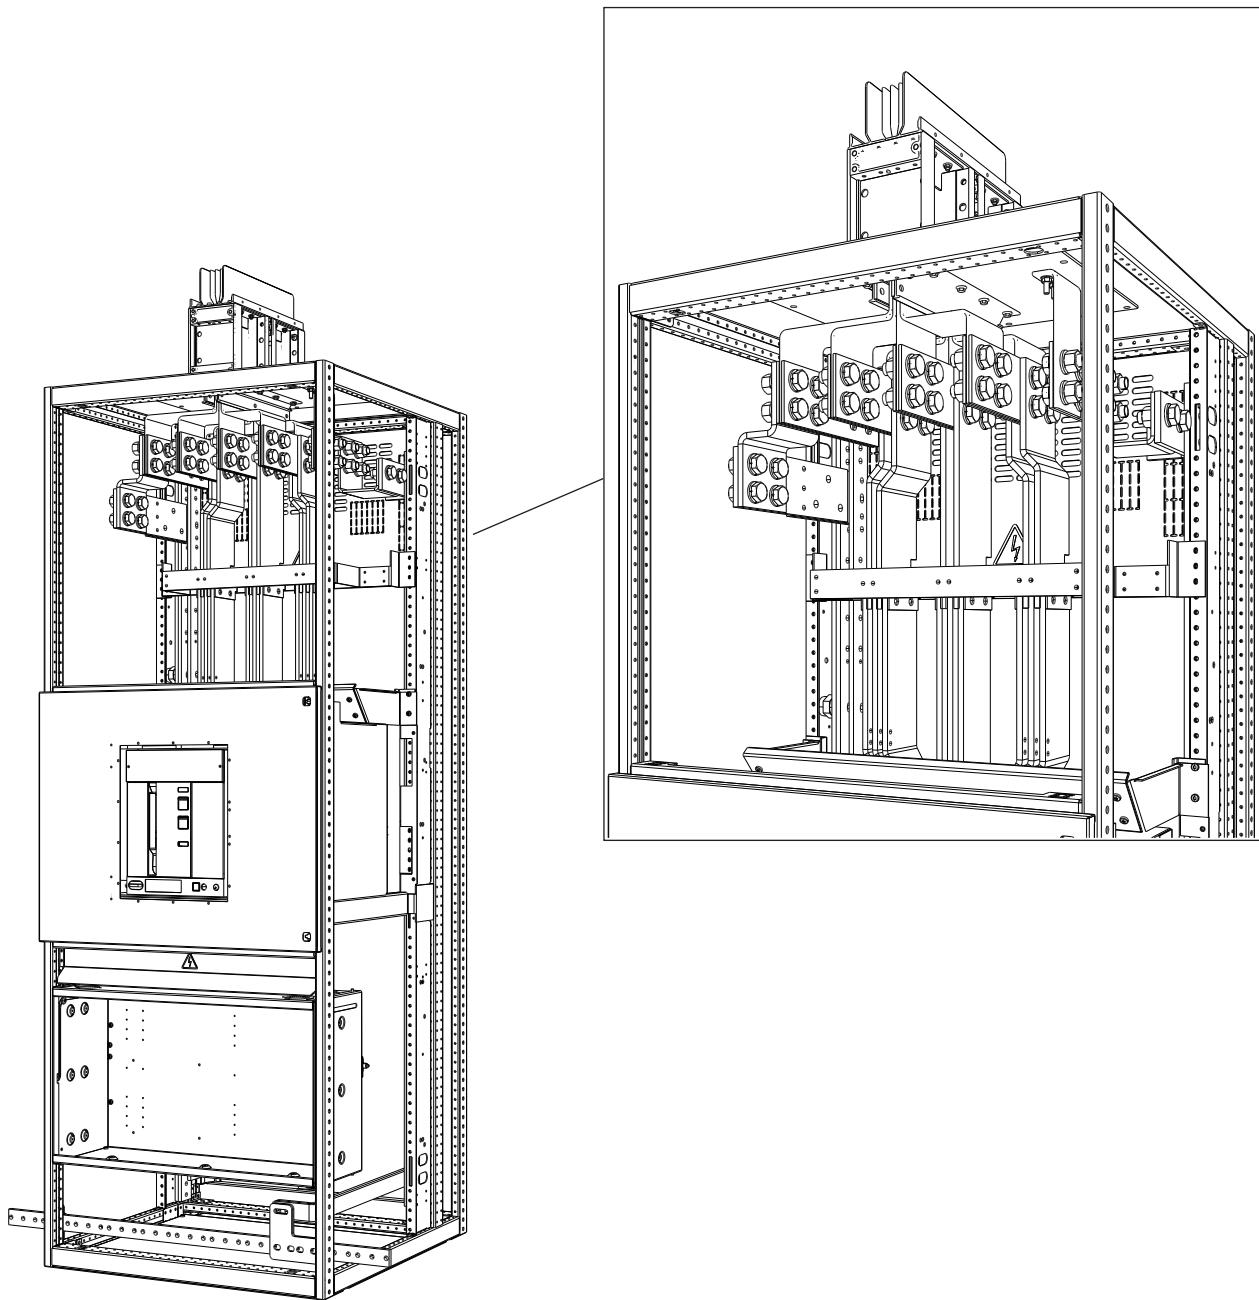

Physical Data

Switchgear Connection

The mechanical connection of busway and low-voltage switchgear need flanged end and connecting copper bar.

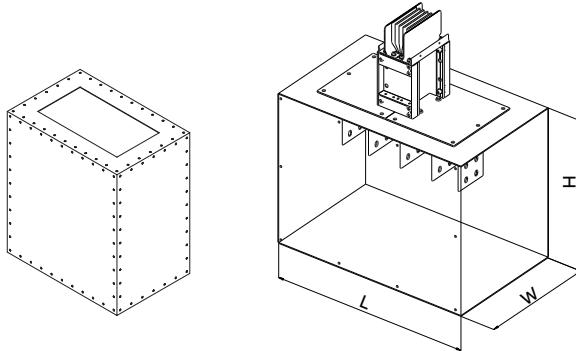

The copper bar shall be made locally according to the specific size measured on site and provided by users.

Physical Data

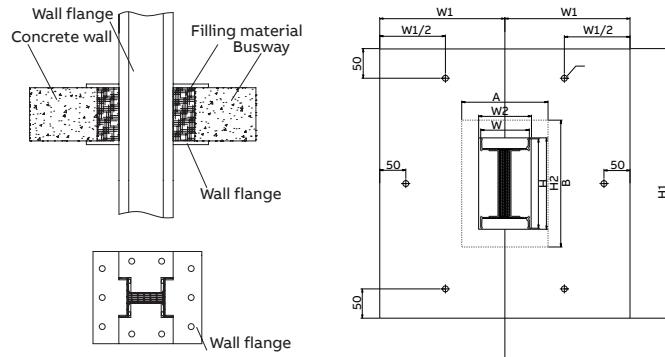

Other Fittings

End tap box

End tap boxes are used where a run of busway is fed by cable. The standard size is 1000mm × 1000mm × 1000mm, while we also able to supply with nonstandard box according to customer requirements.

Wall Flange

Wall flanges are used when the busway is penetrating a wall. To meet the fire resistance specification the wall flanges are required to be installed.

Wall flange and cutout dimensions

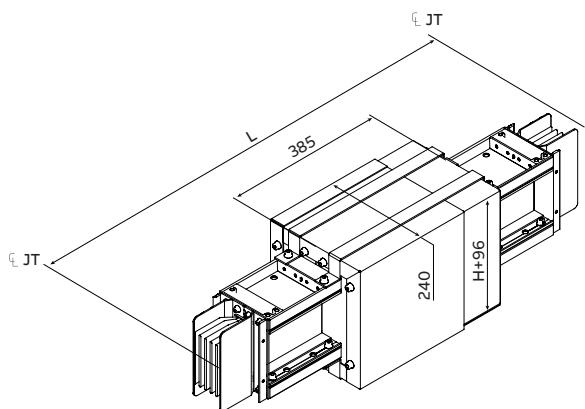

Rated current (A)	External dimension of busway W×H	Dimension of cutout A×B (≥)	External dimension of wall flange W1×H1 (≥)	Internal dimension of wall flange W2×H2 (≥)	mm
400	135×104	240×205	225×405	150×115	
630	135×104	240×205	225×405	150×115	
800	135×114	240×215	225×415	150×125	
1000	135×129	240×230	225×430	150×140	
1250	135×149	240×250	225×450	150×160	
1600	135×184	240×285	225×485	150×195

3200	135×354	240×455	225×655	150×365	
4000	135×434	240×535	225×735	150×445	
5000	135×534	240×635	225×835	150×545	
6300	135×764	240×865	225×1065	150×775	

Notes:

1. One SKU includes two wall flanges (one per side)
2. Wall flange is fixed against the wall with internal expansion bolt

Expansion length

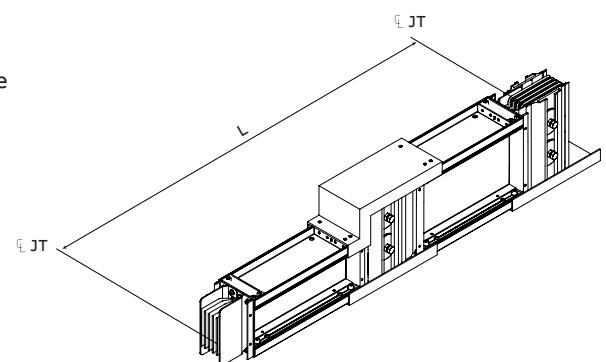

An expansion length is the section compensating for thermal expansion of the busway when it is run either across or up a building. The expansion range of each expansion length is $\pm 25\text{mm}$. It is normally set each 60m on the straight length. When the busway run straight length is 60m or more, particularly if the Busway is not free to move at the ends of the run, the expansion length may be necessary.

Note: The standard length L is 1000mm

Reducer

The reducer is the transition section used for reducing the current. It provides users with more economic power transmission and distribution method.

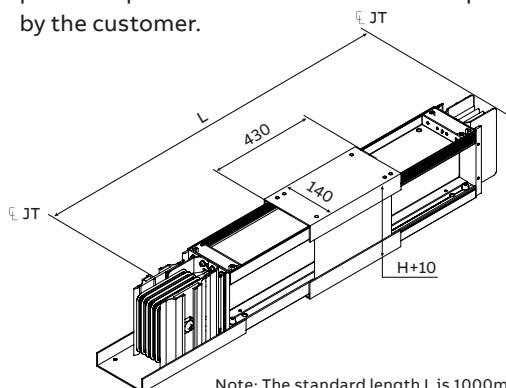

Reducer

Note: The standard length L is 1000mm

Busway rating	Rating after reducer										
SKU suffix	400	630	800	1000	1250	1600	2000	2500	3200	4000	5000

4000	-	-	-	-	-	R16	R20	R25	R32	-	-
5000	-	-	-	-	-	-	R20	R25	R32	R40	-
6300	-	-	-	-	-	-	-	R25	R32	R40	R50

Transposition section

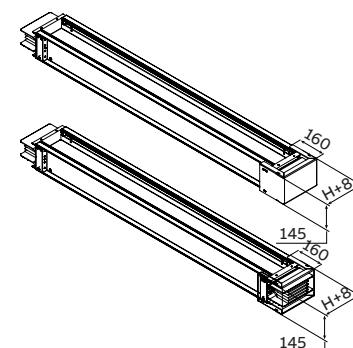

Transposition section is the transition parts used for changing phase sequence of the busbar. The phase sequence of both sides has to be provided by the customer.

Note: The standard length L is 1000mm

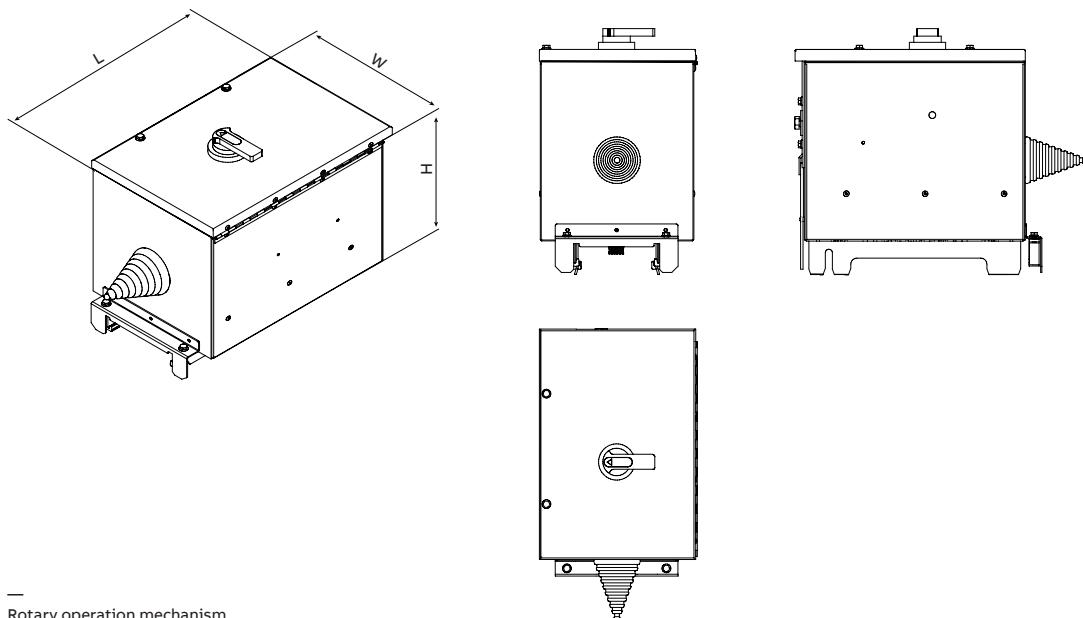

Terminal Cover

Terminal cover is installed to terminate the busway run to prevent ingress of external materials/particles and contact with live parts, thus enclosing the whole busway system.

Note: Additional 50/54mm is considered for installing the rotary handle

Busway Installation

Minimum distance required for feeder busway installation

Minimum distance required for plug-in busway installation

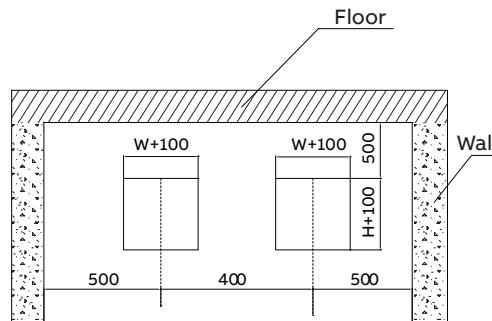

Relationship between the bus plug rated current and the spacing L

When the busway is installed against the wall horizontally or vertically, there should be certain spacing reserved for bus plug installation.

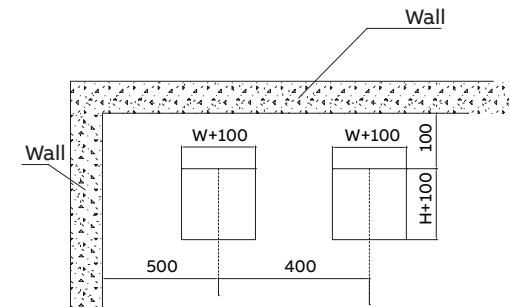

Rated current of bus plug (A)	100	160	250	400	630	800	1000
L (mm)	150	175	195	210	230	260	300

Reserved holes for busway installation

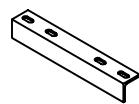

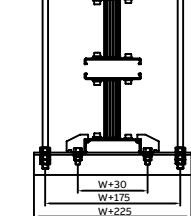

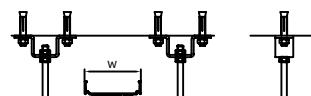

Dimensions of cut holes for busway horizontal through-the-wall installation

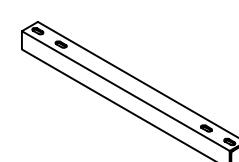

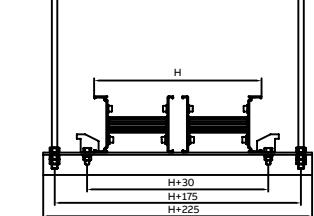

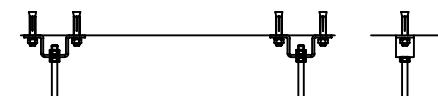

Dimensions of cut holes for busway vertical through-the-floor installation

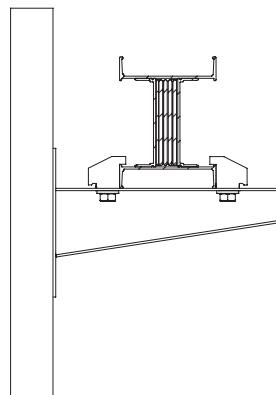

Trapeze - Edgewise

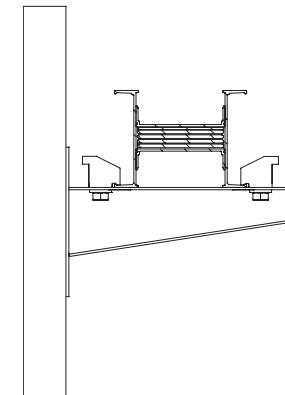

Trapeze - Flatwise

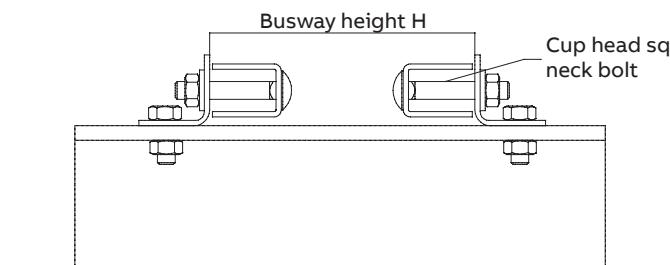

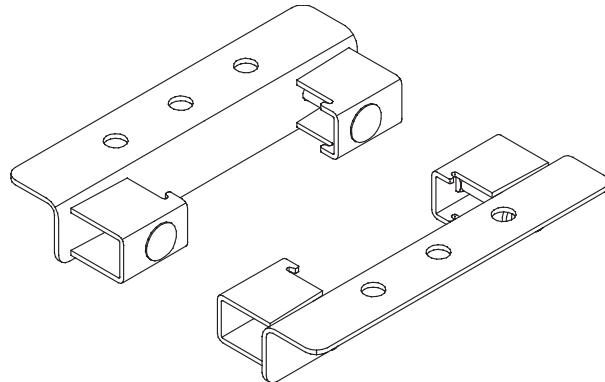

Wall mounted hanger - Edgewise

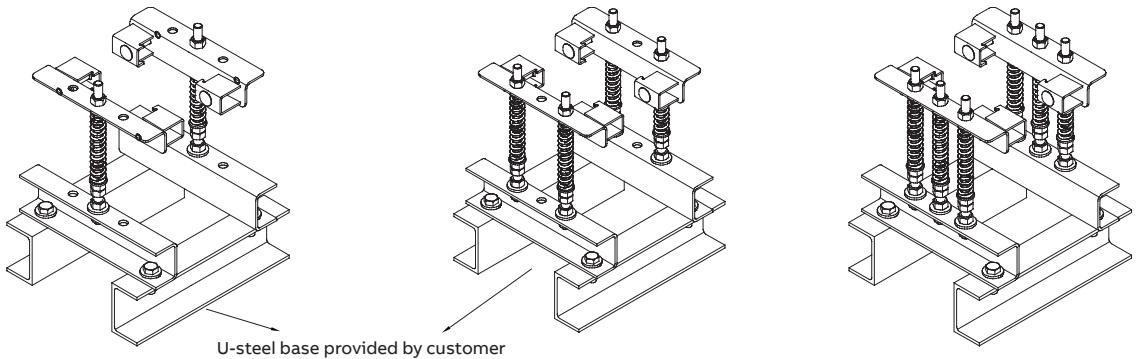

Wall mounted hanger - Flatwise

Vertical hanger

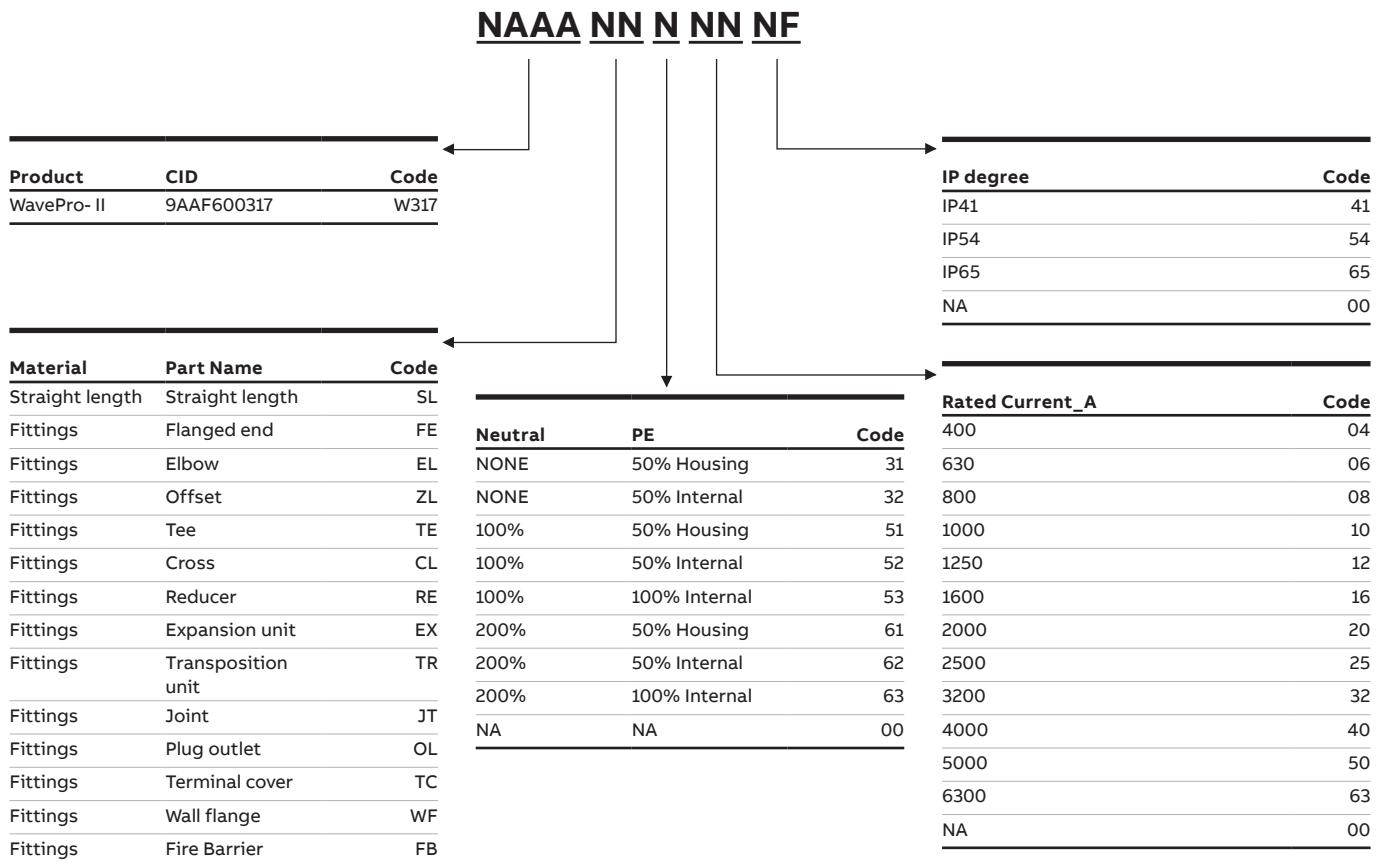

Rated current (A)	Number of springs
400-800	2
1000-2500	4
3200-6300	6

Vertical spring hanger

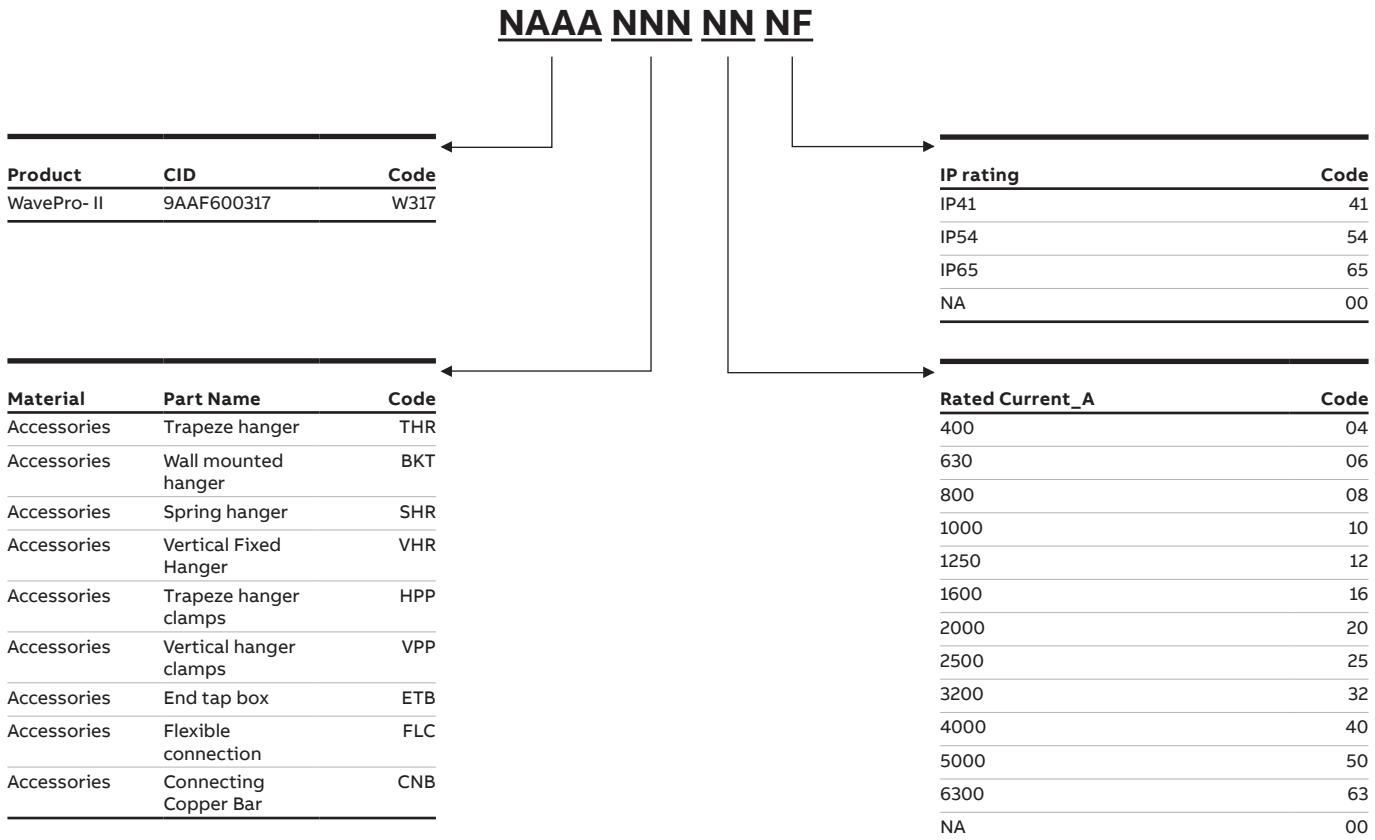

Note 1: For flatwise busway installation, it is recommended the hanger spacing should not be greater than 2 meters
 Note 2: For edgewise busway installation, it is recommended the hanger spacing should not be greater than 4 meters

ABB Connect

The digital assistant for all your electrification needs

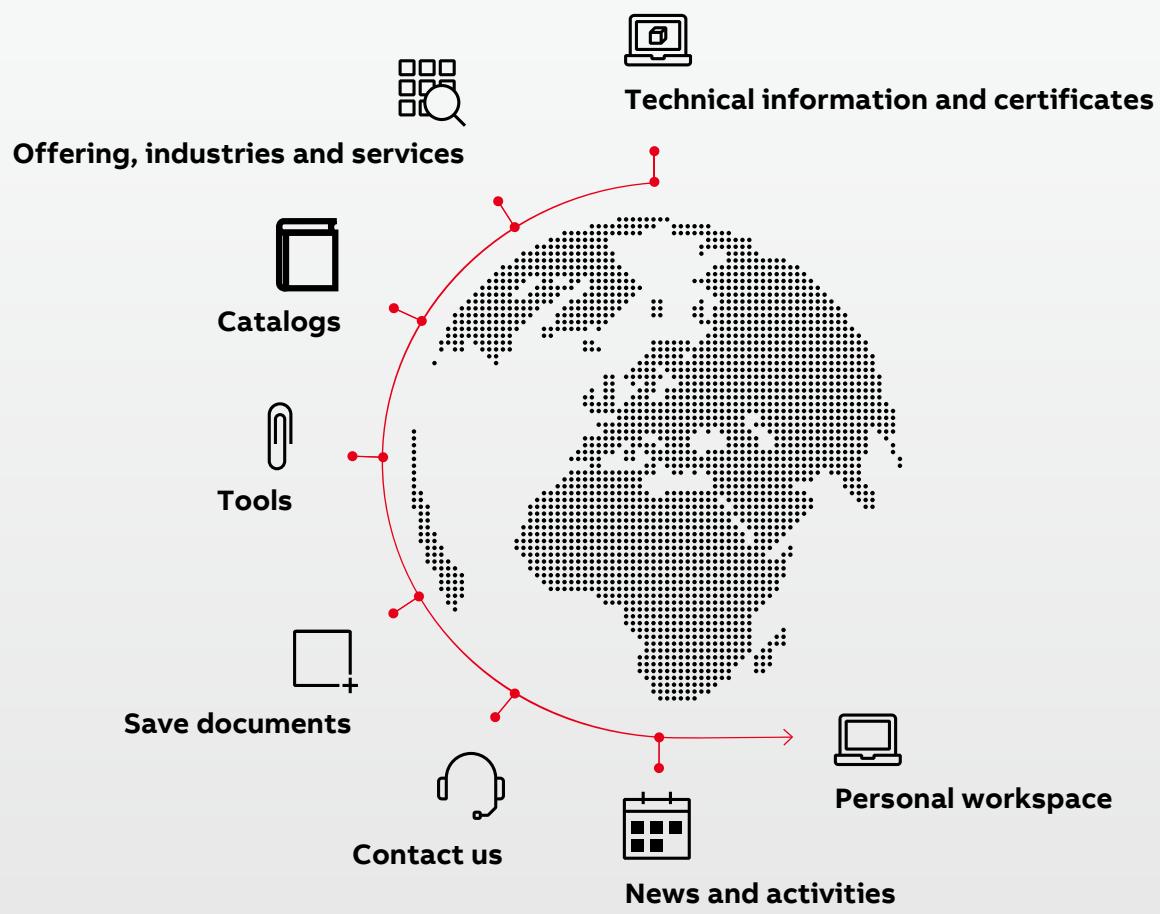

ABB Connect helps you to find product information and stay connected to the latest news and tools. It's a digital assistant that enables customers to connect to the broadest range of electrification solutions in one place.

- Easy to find what you need by search
- Get all information about our products, applications, selection guides, installation manuals, service, certificates, and engineering tools, etc.
- Saving documents locally, updating automatically.
- Receive your expected messages
- Online customer service

You can use ABB Connect on iOS, Android and Windows 10 device
