PRODUCT GUIDE

# ReliaGear™ OEM lighting panelboards

Building smart, reliable, and flexible solutions together

—  
by ABB

## ReliaGear™ OEM lighting panelboards

It is not only about delivering a product, it is also about delivering future proof solutions

When we designed ReliaGear™ OEM lighting panelboards, we not only thought about adding technical features that meet standards, we also thought about the way they will contribute to the success of our OEM partners. That is why we do not skimp on investing in R&D, product development, or adapting our process. The result, future proof solutions that will help you adapt to the ever-evolving industry requirements, improve performance and for your end customers, all while growing your business.

ReliaGear™ OEM lighting panelboards offer the compactness and flexibility you need to design and complement your solutions. Their performance and protection capabilities will help you ensure continuity of service and protection of equipment at all times. ReliaGear™ OEM lighting panelboards are well suited for commercial or light industrial applications to advanced heavy-duty applications.

## ReliaGear™ OEM lighting panelboards

It is not just about high-quality components, it is also about a partner you can trust and count on.

### Vast engineering documentation

Having complete information is essential to make sure that the components used in the design will deliver the desired performance. Even more, having access to hundreds of drawings and 3D models of different panelboard configurations will help you complete your design faster and reduce errors.

### Space optimization

Space optimization is key for OEM customers.

Type L shorter rail alternative provides a smaller footprint by shortening the side rails and therefore reducing the total height of the interior, allowing customers to develop a higher power density solution.

### Advanced flexibility

Being able to comply with unique sets of requirements can be critical to win or lose a project. ReliaGear™ OEM lighting panelboards offer the flexibility you need to design customized solutions by incorporating ReliaGear lighting panelboards configurations into two OEM arrangements, Type G and Type L.

### Count on us 24/7

Doing business with us gives you the confidence and tranquility you need. We continue to invest in R&D, manufacturing capacity, innovative tools, and more importantly, our people to deliver best-in-class solutions. It is not just about a component, it is also about a partner you can trust and count on.

### Continuous operation

Flexibility is nothing without performance, and ReliaGear™ OEM lighting panelboards are able to handle the most extreme breaking capacities. This functionality, combined with the most precise electronic trip units in the smallest of frames, help ensure continuity of service and equipment protection at all times.

### Speed up your projects

Ease of installation is equal to savings in project costs.

ReliaGear™ OEM lighting panelboards enable to complete more projects in less time. Both, Type G and Type L, include four keyhole hangers to effortlessly and safely secure screws through them to mount the panelboard interior enabling easier and faster installation. Plus, the extruded split neutrals and NEMA enclosures offer ample gutter space to simplify wiring in the type G.

## ReliaGear™ OEM lighting panelboards

It is not just about a component, it is also about the flexibility and performance you expect.

ReliaGear™ OEM lighting panelboards are assembled on rigid steel frames and equipped with circuit breakers from 15 A to 600 A. The maximum short circuit rating is equal to 65 kAIC at 240 V AC and 480/277 V AC.

ReliaGear™ OEM lighting panelboards are available as type G or Type L.

### Type G

Reliagear OEM Type G panelboards include the interior, enclosure, front, and shield.

### Type L

Reliagear OEM Type L panelboards provide the interior construction only.

ReliaGear™ OEM lighting panelboards Type G or Type L incorporate the best features you find in the ReliaGear RQ, RL, RE, RS, and RD lighting panelboards.

Advanced FORMULA A2 and SACE Tmax® XT circuit breakers as mains and sub-feeds are in charge of protecting against destructive overloads or short circuits. High-strength, impact resistant bus supports provide both isolation and structural durability.

### System voltages

- United States and Canada
  - 480 V AC; 3-phase, 3-wire
  - 600 V AC; 3-phase, 3-wire
  - 208Y/120 V AC; 3-phase, 4-wire
  - 480Y/277 V AC; 3-phase, 4-wire
  - 600Y/347 V AC; 3-phase, 4-wire
  - 120/240 V AC; 1-phase, 3-wire
  - 240 V AC; 3-phase, 3-wire
- International
  - 380 V AC, 3-phase, 3-wire
  - 400 V AC, 3-phase, 3-wire
  - 415 V AC, 3-phase, 3-wire
  - 220Y/127 V AC, 3-phase, 4-wire
  - 230Y/127 V AC, 3-phase, 4-wire
  - 380Y/220 V AC, 3-phase, 4-wire
  - 400Y/231V AC, 3-phase, 4-wire
  - 415Y/240V AC, 3-phase, 4-wire

## ReliaGear™ OEM lighting panelboards– Type G and Type L

Choosing the right configuration for your business

Type G or Type L panelboards are built from the ReliaGear lighting panelboard family of configurations RQ, RL, RE, RS and RD.

<sup>1</sup>125-600A Main Breaker; 125-800A Main Lug Only

<sup>2</sup>Series rating capabilities are indicated in panel configuration in Empower or DET-008 document

## ReliaGear™ OEM lighting panelboards – Type G

Design flexibility for an advanced level of customization

ReliaGear™ OEM Type G includes the same standard components as the ReliaGear™ lighting panelboards: enclosure, shield, front and Interior<sup>1</sup>. Designed for facility electrical systems where main and branch connections are made in the field, this interior contains a full height deadfront shield that provides NEC

compliant wire bending space when utilized with ReliaGear or equivalently sized enclosures. UL labeled and listed, Type G is available in main lug or main breaker and gives you the full capabilities of the factory assembled panelboard with the ability to stock and ship as needed.

### Available environmental enclosure types

- NEMA 1
- NEMA 3R
- NEMA 4/4X
- NEMA 4/4X/12

### Fronts for NEMA1 enclosures

- Standard
- Door within door
- Front hinged to box
- Standard with quarter turn lock

<sup>1</sup> Enclosure and Front can be excluded from the provision by selecting "Interior only" option in the Empower configurator. In this case, customer will receive only the interior and shield. Product configuration as shown in the illustration: AQG, XT5 Main Breaker, 42 ckt

## ReliaGear™ OEM lighting panelboards offering – Type L

Compact interiors to make the best use of available space

Reliagear OEM Type L provides the interior construction which is the core component for any power distribution solution. This UL recognized interior is the perfect choice for customers who desire to incorporate Reliagear interiors in their electrical distribution equipment. Originally designed for power conditioning equipment, it can be utilized anywhere mounting space is at a premium and wiring terminations will be made at the factory. Type L interiors are furnished without a deadfront shield, and do not include the enclosure and front. They are available in

125-800A main lug and main stud and 125-600A main breaker. Developed with customer input, the new Type L shorter rail alternative provides a smaller footprint by shortening the side rails and therefore reducing the total height of the interior. This brings even more flexibility allowing OEMs to optimize the final design/solution. Type L shorter rail alternative can be easily selected in our empower configurator tool and is available for main lug interiors only.

---

**Type L**

AQL, 42 ckt, Conventional Rails, Main Lug

---

**Type L – Shorter rails**

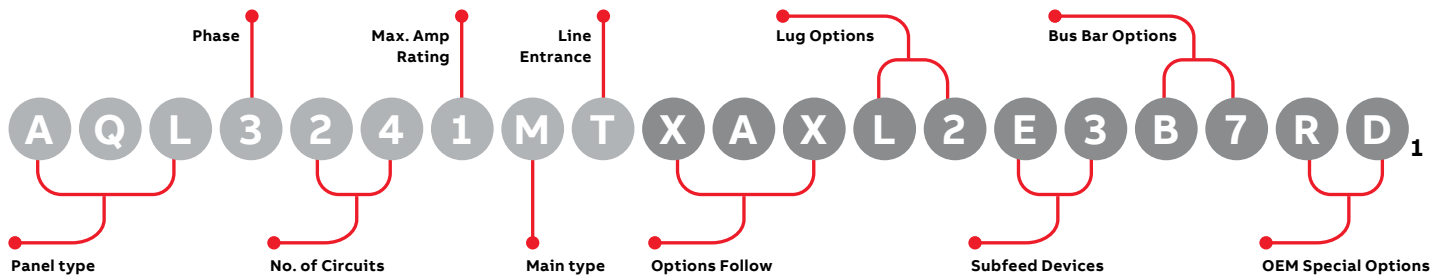

AQL, 60 ckt, Shorter Rails, Main Lug

<sup>1</sup>Pressure lug = Standard lug; Compression lug = Crimped.

Oversize: Bigger holes for larger cable diameter which are used to mitigate voltage drop on larger distances.

<sup>2</sup>XT breakers occupy 3P spaces but can be used as 2P.

Only standard options are included in this table and example interior product number structure. Please visit our Empower configurator tool for options not included in this document

Molded case circuit breakers

From design to manufacturing, FORMULA A2 and Tmax XT circuit breakers set the standard for edge technologies to deliver XTreme performance. With superior quality and advanced features such as higher interrupt ratings (up to 200 kA), Ekip DIP and thermal magnetic trip units, FORMULA A2 and Tmax XT circuit breakers support low tier to high tier customers.

Tmax XT, FORMULA A2, and legacy GE circuit breakers

Thermal magnetic adjustable

- Key:
- 1. Current threshold for short circuit protection.
  - 2. Rotary switch for short circuit protection.
  - 3. Current threshold for overload protection.
  - 4. Rotary switch for overload threshold setting.

### Ekup DIP LSI or adjustable L, S, and I

Key:

1. DIP switches for overload protection setting.
2. DIP switches for short circuit and time-delayed short circuit protection settings.
3. Slot for lead seal.
4. Test connector.
5. Power-on LED.
