MEDIUM VOLTAGE PRODUCT

## IHBF

### Indoor current transformers

- 01 Non-reconnectible transformers
- 02 Transformers with reconnectible secondary
- 03 Primary reconnection for IHBF 12 A; 17 A and 24 C

Technical parameters	Value
Design voltage	12 - 24 kV
Frequency	50 and 60 Hz
Maximal primary current	10 - 2 000 A
Number of core	1; 2 or 3
IHBF 12 A, 17 A and 24 C are delivered with a reconnectible primary for 2 ratios.	
Class	0.2; 0.5; 1; 5P

### Description

#### Design voltage 12-24 kV

- The transformers can be mounted in any desired position
- The cores and windings are moulded entirely in epoxy resin
- The transformers have smooth surfaces and are adapted for installation in switchgear
- A- and C-type transformers can be provided fitted with a baseplate

In the type designation, e.g. IHBF 12 A 2-1 the number (12) signifies the design voltage in kV, the letter (A) the size and the figure (2) the number of cores. The last figure determines the type of secondary terminals and whether the transformer has a baseplate for mounting or not:

- (1) = plug-in type terminals, no baseplate
- (2) = clamp type terminals and baseplate
- (3) = plug-in type terminals and baseplate

#### Rated burden and accuracy

The transformer cores are manufactured of high-grade magnetic material. Different sizes of cores can be selected depending on the accuracy, burden and accuracy limit factor.

#### Standards, test voltages etc.

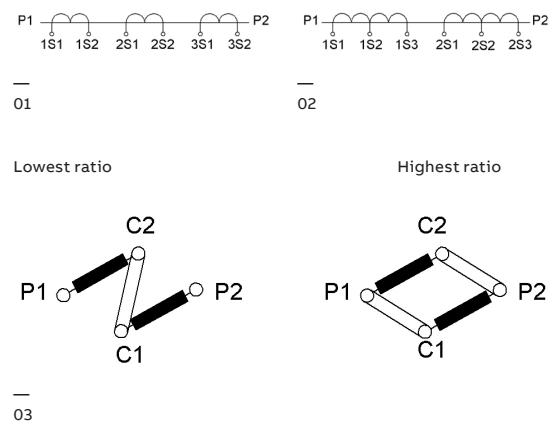

The current transformers fulfil the insulation requirements of the following standards

Type	International IEC 185	American ANSI C57.13	Canadian CAN 3 C13	Test voltage		Maximum permissible physical force on primary terminals
				Swedish SEN 270811	Type tests	
	Design voltage	Nominal system voltage	Design voltage	Impulse 1.2/50	Dry test 50 Hz 1 min	
IHBF	kV	kV	kV	kV/pea	kV	kN
12	12	13.8	15	95	34	3 750
17	17.5	-	-	95	38	3 750
24	24	25	27.5	125	50	3 000

#### Short circuit strength

The maximum thermal short-circuit current for 1 second = 50 kA at the highest ratio. For shorter periods than 1 second, the transformers can withstand higher short-circuit currents. (The maximum thermal short-circuit current = the permissible surge current/2.5). At lower rated currents, the short circuit strength is reduced.

#### Diagrams

P1, P2	Primary terminals
1S1, 1S2	Secondary terminals for core 1 (for transformers with 1 core: S1, S2)
2S1, 2S2	Secondary terminals for core 2
3S1, 3S2	Secondary terminals for core 3

## Summary

Type IHBF	Max. primary current [A]	Max. number of cores	Primary reconnectible
12 A	1 200	2	Yes
12 B	2 000	3	No
17 A	1 200	2	Yes
17 B	2 000	3	No
24 B	2 000	3	No
24 C	1 200	2	Yes

### Selecting current transformers

When ordering, state the type designation and the Catalogue/Code number including the technical data. Current transformers are selected from the ordering tables as follows:

### Insulation level

Select a transformer that has the required insulation level and the required number of cores, from the tables.

### Rated current and short-time current

Select the associated rated current and short-time current from the tables.

### Cores and secondary windings

These are selected from the tables. The available core space in the transformer can be divided among a number of cores. Cores of different sizes are listed in the catalogue and are marked with the percentage of the total space required by each size of core, e.g., for IHBF 12 A: 2 pcs 35 % cores or 1 pc 100% core or 1 pc 35 % + 1 pc 65 % core can be accommodated, i.e., a total of max. 100 %.

### Non-catalogue listed transformers

Versions which are not covered by the catalogue can, to a certain extent, be quoted for on request. This will involve an extra charge. Full information must be provided with the enquiry. At rated primary currents that are between two tabulated values, the maximum burden will be equivalent to that for the next lower rated primary current. Additional terminals on the secondary winding for another lower ratio:

For measuring transformers, the reduction in burden is approximately proportional to the square of the rated ampere turns when the secondary rated current is unchanged. In certain cases, this may mean a lower accuracy class. In the case of relay cores, the reduction in burden is approximately

proportional to the rated ampere turns.

### Ordering

When ordering, state:

- Type designation
- Primary current
- Short time current and surge current
- Standards
- Frequency
- Core 1
  - A Core size
  - B Rated secondary current (1, 2 or 5 A)
  - C Burden 1
  - D Class
  - E Burden 2 (not obligatory)
  - F Class 2 (not obligatory)
- Core 2 (compare with particulars for core 1)
- Core 3 (IHBF 12-24 B only)
  - (compare with particulars for core 1)

### When required

- Fault characteristics for core no.
- Magnetisation curves for core no.
- Test certificate
- In case of a transformer without a base plate state if no secondary plug is needed. Otherwise it will automatically be delivered and charged for.

## Preferred transformers for 12 and 24 kV

### Technical data and ordering information

#### IHBF 12 and 24 kV

A selection of current transformers type IHBF are made as preferred-types which have two advantages:

1. The transformers are ready-designed and complete with documentation for the most common types to ensure a short delivery time for urgent orders.
2. Simplified ordering process with every preferred IHBF having a unique ordering code.

When ordering transformers in accordance with the following table, please state ordering code and quantity.

#### Ordering details

Current transformers	IHBF 12 A 2 and 24 C 2
International standard	IEC 60044-1
Swedish standard	SEN 270811
Secondary rated current	5 A
Number of cores	2
Weight	16 and 22 kg

E.g. IHBF 12 A2-2-AF 17 specifies a transformer for a nominal voltage of 12 kV, with base plate and with ratings as detailed on the first line of the table above.

## Custom designed transformers

### IHBF 12 A, 17 A and 24 C

Technical data and ordering information

#### Ordering data for type IHBF 12 A, 17 A and 24 C

Transformers where the difference between short-time current and rated current is too large, must in these cases be loaded with a min burden which is marked on the rating plate.

#### Ordering details

### IHBF 24 B

Technical data and ordering information

#### Ordering data for type IHBF 24 B

International standards IEC

Swedish standards SEN 270811

Short-time current 50 kA for 1 second

Surge current 140 kA

Rated secondary current 1; 2 and 5 A

Number of cores 1-3

Mass 32 kg

Values of  $U_k$ ,  $I_o$  and  $R_{ct}$  applies to a rated secondary current of 5 A

Rated sec. current 1 A: Multiply  $U_k$  by 5

Divide  $I_o$  by 5

Multiply  $R_{ct}$  by 25

Rated sec. current 2 A: Multiply  $U_k$  by 2.5

Divide  $I_o$  by 2.5

Multiply  $R_{ct}$  by 6.25

Rated primary current	(Core size 30 M)				(Core size 35 M)				(Core size 30)

(1) For rated secondary current of 5 A only.

(2) Class C according to ANSI C57.13 and class 2.5L according to CAN 3-C13.

Transformers where the difference between short-time current and rated current is too large, must in these cases be loaded with a min burden which is marked on the rating plate.

## Custom designed transformers

### IHBF 12 B

Technical data and ordering information

(1) Class C according to ANSI C57.13 and class 2.5L according to CAN 3-C13.

Transformers where the difference between short-time current and rated current is too large, must in these cases be loaded with a min burden which is marked on the rating plate.

**Secondary terminals**

## Accessories

Plug-in contact without protective shroud

- max. number of terminals:
  - 6 for IHBF 12 A and 24 C
  - 9 for IHBF 12 B and 24 B

Terminal box with

- two entrance holes for 22.5 mm threaded steel conduit
- clamp terminal for a cross-sectional area of max. 6 mm<sup>2</sup>
- max number of terminals
  - 6 for IHBF 12 A and 24 C

Earthing clamp

- in secondary terminal box, for a cross-sectional area of max. 6 mm<sup>2</sup>
- on the baseplate, for max. 15 mm diameter or square conductor
