

Energy meters

We take the sub-metering to the next level

ABB's MID-approved Energy meters offer the same quality as revenue meters, approved meters and verified meters. Energy meters are certified and have verified meter accuracy, which is a critical factor in establishing fairness in cost allocation and distribution among tenants. Many Energy meters are also delivered directly from our factory with first time verification. ABB's Energy meters are high-performance, modular DIN rail-mounted electricity meters that are safe, easy to install and can be integrated with existing and future electrical installations. Energy meters are designed to fulfill any type of sub-metering requirement.
