## Energy meters

Fast installation and easy configuration,  
available at your wholesaler

The new Energy meters from ABB are developed with the installer in mind. Their user friendly installation is straight forward, no problem. The informative display and buttons in front quickens the setup with easy settings. The Energy meter tells you if it's installed correctly and an indication of even the smallest current flow means you do not have to wait for the first kWh blink on the LED to confirm that it is working.
