indirect lightning strikes causing induced or conducted overvoltages on the power distribution network.

Type 2 SPD's are designed to discharge the currents generated by

They are characterized by an 8/20µs waveform (Imax). Higher is the Imax, more powerful they are.

They are installed in the main distribution switchboard but also in subdistribution board.

They have a low residual voltage Up often compatible with the withstand voltage of the equipment to protect.

Thanks to the patented Safety Reserve system, you can extend the lifespan of the installation plan maintenance to reduce downtime risk.
