## SD Series Control and I/O

### Automation for a sustainable world.

Introducing the SD Series – a green portfolio of completely scalable control and I/O products. Working across the entire control landscape, the SD Series delivers a total plant automation solution regardless of application type, size, or physical location. Energy efficient, scalable architecture, compact lead-free design, extreme operating range, optimized footprint, field proven technology, and device and electrical integration make SD Series the best solution for your new installation, upgrade or expansion.

**Symphony Plus Total Plant Automation.** The power of a well-orchestrated performance.

#### Simple.

Symphony® Plus is easily adapted to meet the broad spectrum of plant configurations and applications.

#### Seamless.

Symphony Plus enables the seamless integration of field devices, process and turbine automation systems, electrical and SCADA systems, and business and maintenance systems.

#### Scalable.

Symphony Plus' unique system architecture provides flexible and scalable configurations, from the small and server-less to large multi-system, multi-server architectures.

#### Secure.

Symphony Plus provides users with a secure and reliable control environment with built-in security features that prevent unauthorized control system access.

**Achieving total plant automation with a single control and I/O platform.**
