遵循安全指导

警告！ 请遵循这些指导。如果您忽略指导，可能会导致受伤、死亡或设备损坏：

- 如果您不是具有资格的电工，请勿进行电气安装工作。
- 当接上主电源时，切勿在变频器、电机电缆或电机上操作。如果变频器已经连接到了输入电源，请在断开输入电源后等待 5 分钟。
- 当变频器或外部控制电路连接了电源时，切勿操作控制电缆。
- 在安装时，确保不让钻孔和研磨出的碎屑进入变频器。
- 确保变频器下方的地面和安装变频器的墙面是阻燃的。

检查电容是否需要重整

如果变频器已经有一年或更长时间未通电（存放或未用），则必须重整电容。

您可以从序列号来判断生产时间。序列号可以在变频器所贴的型号标签上找到。序列号的格式是 MYYWWWRXXXX。YY 和 WW 以下方式说明生产年份和周次：

YY: 13、14、15、... 分别代表 2013、2014、2015、...

WW: 01、02、03、... 分别代表第 1 周、第 2 周、第 3 周、...

有关电容重整的信息，请参阅互联网上的 *Converter module capacitor reforming instructions*（变频器模块电容重整说明）(3BFE64059629 [英语])，网址：www.abb.com/drives/documents。

ZH

选择电缆

应根据当地规范选择能承载变频器型号标签上标称电流的电缆规格。

确保冷却

R0-
R4
请参阅第 [13](#) 上的表 [I](#) (UL: 第 [13](#) 页上的表 [II](#)) 了解 散热信息。变频器的允许操作温度范围是 -15 到 +50°C (+5 到 +122°F)。不允许凝露或结霜。如需了解环境温度和降低额定值的更多信息 , 请参阅 *ACQ580-01 (0.75 至 250 kW) 硬件手册* (3ABD00045442 [中文]) 中的 [技术数据一章](#)。

保护变频器和输入电缆

请参阅表 [III](#) (第 [14](#) 页) 和 [IV](#) (第 [14](#) 页) ; (UL : 第 [15](#) 页的表 [V](#)) 了解熔断器的信息。

如果使用 gG 熔断器 , 请确保熔断器的熔断时间少于 0.5 秒。遵循当地法规。

在墙上安装变频器

请参阅第 [61](#) 页的图 [R0...R4 Figures A](#)。

检查供电电缆和电机的绝缘

在将输入电缆连接到变频器前 , 请按当地法规检查其绝缘。

请参阅第 [61](#) 页的图 [B1](#)。

1. 电缆从变频器断开后 , 检查电机电缆和电机的绝缘。使用 1000 V 直流测量各相导线之间的绝缘电阻 , 然后测量每相导线与保护性接地导线之间的绝缘电阻。典型电机的绝缘电阻必须超过 100 Mohm (参照值为 25°C 或 77°F 时测得)。对于其他电机的绝缘电阻 , 请参阅其制造商的说明。

注 : 电机外壳内部的湿气会降低绝缘电阻。如果湿气长期存在 , 请干燥电机后再次测量。

关闭电源并打开盖板

请参阅第 [61](#) 页的图 [B1](#)。

2. 关断变频器电源。
3. 卸下前盖：用螺丝刀松开固定螺钉 (3a)，从底部向外 (3b) 再向上 (3c) 将前盖拉出。

检查与 IT (浮地) 和角接地的 TN 系统的兼容性

EMC 滤波器

内置 EMC 滤波器不适用于 IT (浮地) 系统或角接地的 TN 系统。在将变频器连接到电网前断开 EMC 滤波器的连接。查看第 [10](#) 页的表。

 **警告！** 请勿将连接了内置 EMC 滤波器的变频器安装在 IT 系统 (浮地电网系统或高阻抗接地系统 [超过 30 ohm] 的电网系统)，否则系统将可能会通过变频器的 EMC 滤波器电容连接到接地线。这可能会导致危险或损坏变频器。

请勿将连接了内置 EMC 滤波器的变频器安装在角接地的 TN 系统，否则可能会损坏变频器。

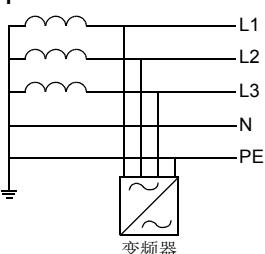

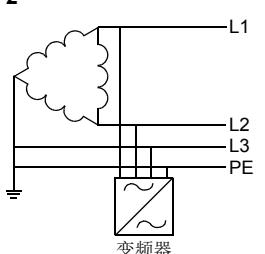

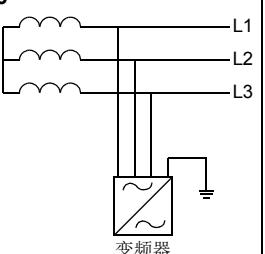

注：不连接内置 EMC 滤波器，变频器的 EMC 兼容性会显著降低。

压敏电阻

压敏电阻不适用于 IT (浮地) 系统。在将变频器连接到电网前断开压敏电阻的连接。查看第 [10](#) 页的表。

 **警告！** 安装变频器时请勿将压敏电阻连接到 IT 系统 (未接地电网系统或高阻抗接地系统 [超过 30 ohm] 的电网系统)，否则会损坏压敏电阻的电路。

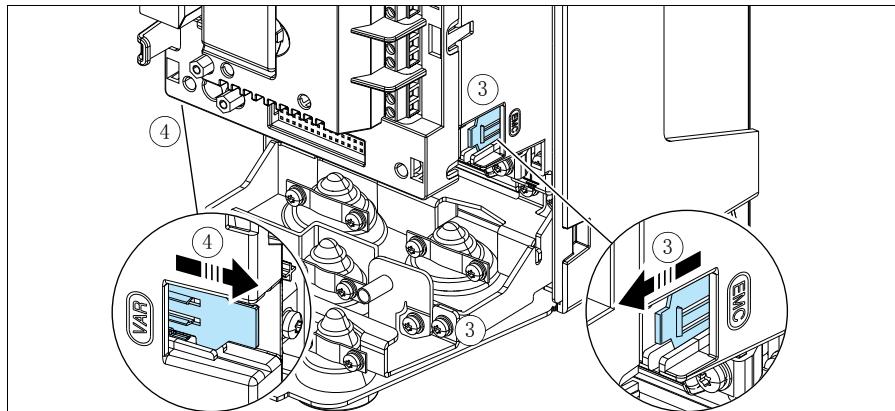

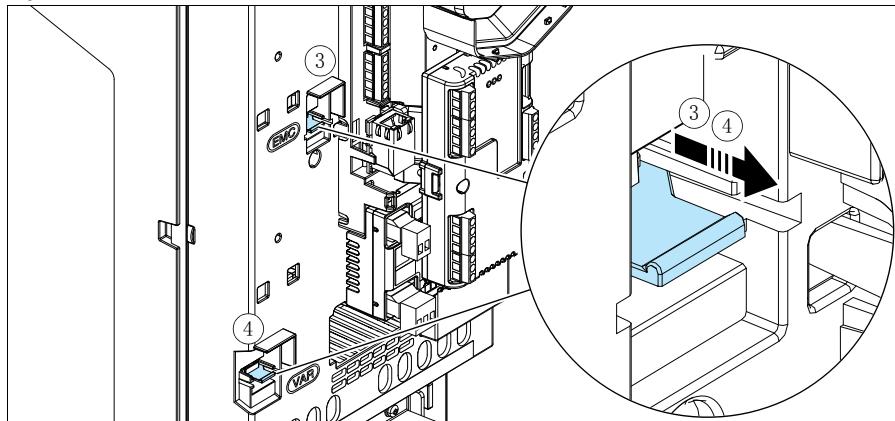

如须断开 EMC 滤波器 (EMC) 或压敏电阻 (VAR)，请查看下表。具体操作说明请参阅第 11 页。

外形尺寸	EMC 滤波器 (EMC)	压敏电阻 (VAR)	对称接地 TN 系统 (TN-S 系统) ¹	角接地 TN 系统 ²	IT 系统 (浮地或高 阻抗接地系统 [>30 ohms]) ³

Obey the safety instructions

WARNING! Obey these instructions. If you ignore them, injury or death, or damage to the equipment can occur:

EN

- If you are not a qualified electrician, do not do electrical installation work.
- Do not work on the drive, motor cable or motor when main power is applied. If the drive is already connected to the input power, wait for 5 minutes after disconnecting the input power.
- Do not work on the control cables when power is applied to the drive or to the external control circuits.
- Make sure that debris from borings and grindings does not enter the drive when installing.
- Make sure that the floor below the drive and the wall where the drive is installed are non-flammable.

Check if capacitors need to be reformed

If the drive has not been powered (either in storage or unused) for over one year, you must reform the capacitors.

You can determine the manufacturing time from the serial number, which you find on the type designation label attached to the drive. The serial number is of format MYYWWRXXXX. YY and WW tell the manufacturing year and week as follows:

YY: 13, 14, 15, ... for 2013, 2014, 2015, ...

WW: 01, 02, 03, ... for week 1, week 2, week 3, ...

For information on reforming the capacitors, see *Converter module capacitor reforming instructions* (3BFE64059629 [English]), available on the Internet at www.abb.com/drives/documents.

Select the power cables

Size the power cables according to local regulations to carry the nominal current given on the type designation label of your drive.

Ensure the cooling

See table [I](#) on page [13](#) (UL: table [II](#) on page [13](#)) for the heat dissipation. The allowed operating temperature range of the drive is -15 to +50 °C (+5 to +122 °F). No condensation or frost is allowed. For more information on the ambient temperature and derating, see chapter *Technical data* in *ACQ580-01 (0.75 to 250 kW) hardware manual* (3AXD50000035866 [English]).

Protect the drive and input power cable

See tables [III](#) (on page [14](#)) and [IV](#) (on page [14](#)); (UL: table [V](#) on page [15](#)) for the fuses.

If you use gG fuses, make sure that the operating time of the fuse is below 0.5 seconds. Follow the local regulations.

Install the drive on the wall

See figure [R0...R4 Figures A](#) on page [61](#).

Check the insulation of the power cables and the motor

Check the insulation of the input cable according to local regulations before connecting it to the drive.

See figure [B1](#) on page [61](#).

1. Check the insulation of the motor cable and motor when the cable is disconnected from the drive. Measure the insulation resistance between each phase conductor and then between each phase conductor and the Protective Earth conductor using a measuring voltage of 1000 V DC. The insulation resistance of a typical motor must exceed 100 Mohm (reference value at 25 °C or 77 °F). For the insulation resistance of motors, see the manufacturer's instructions.

Note: Moisture inside the motor casing will reduce the insulation resistance. If moisture is suspected, dry the motor and repeat the measurement.

Switch off the power and open the cover

See figure [B1](#) on page [61](#).

2. Switch off the power from the drive.
3. Remove the front cover: Loosen the retaining screw with a screwdriver (3a) and lift the cover from the bottom outwards (3b) and then up (3c).
4. Attach the residual voltage warning sticker in the local language.

Check the compatibility with IT (ungrounded) and corner-grounded TN systems

EMC filter

The internal EMC filter is not suitable for use on an IT (ungrounded) system or on a corner-grounded TN system. Disconnect the EMC filter before connecting the drive to the supply network. Check the table on page [36](#).

EN

WARNING! Do not install the drive with the internal EMC filter connected on an IT system (an ungrounded power system or a high-resistance-grounded [over 30 ohms] power system), otherwise the system will be connected to ground potential through the EMC filter capacitors of the drive. This can cause danger, or damage the drive.

Do not install the drive with the internal EMC filter connected on a corner-grounded TN system, otherwise the drive will be damaged.

Note: When the internal EMC filter is disconnected, the drive EMC compatibility is considerably reduced.

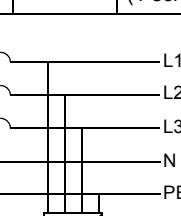

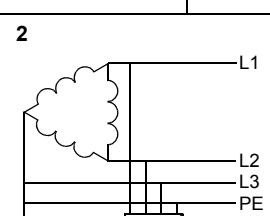

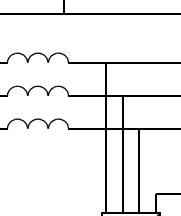

Ground-to-phase varistor

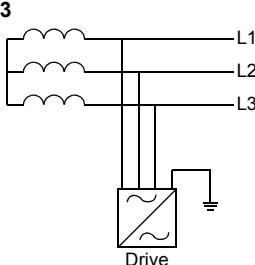

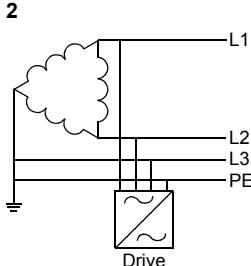

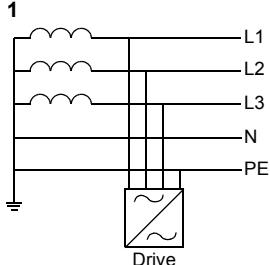

The ground-to-phase varistor is not suitable for use on an IT (ungrounded) system. Disconnect the ground-to-phase varistor before connecting the drive to the supply network. Check the table on page [36](#).

WARNING! Do not install the drive with the ground-to-phase varistor connected on an IT system (an ungrounded power system or a high-resistance-grounded [over 30 ohms] power system), otherwise the varistor circuit can be damaged.

Check from the table below if you have to disconnect the EMC filter (EMC) or ground-to-phase varistor (VAR). For instructions on how to do this, see page [37](#).

Connect the power cables

See figures C1 (page 61), C2, D, E, F1, G1, G1 and G2.

1. Remove the rubber grommets from the lead-through plate.

Use symmetrical shielded cable for motor cabling. If the cable shield is the sole PE conductor for drive or motor, make sure that it has sufficient conductivity for the PE.

2. Cut an adequate hole into the rubber grommet. Slide the grommet onto the cable.
3. Prepare the ends of the motor cable as illustrated in figures 3a and 3b (two different motor cable types are shown). **Note:** The bare shield will be grounded 360 degrees. Mark the pigtail made from the shield as a PE conductor with yellow-and-green color.
4. Slide the cable through the hole of the bottom plate and attach the grommet to the hole.
5. Connect the motor cable:
 - Ground the shield 360 degrees by tightening the clamp of the power cable grounding shelf onto the stripped part of the cable (5a).
 - Connect the twisted shield of the cable to the grounding terminal (5b).
 - Connect the phase conductors of the cable to the T1/U, T2/V and T3/W terminals (5c). Tighten the screws to the torque given in the figure.
6. Repeat steps 2...4 for the input power cable.
7. Connect the input power cable. Connect the additional PE conductor of the cable (7c). Tighten the screws to the torque given in the figure.
8. Install the grounding shelf for the brake resistor cable.
9. Repeat steps 2...4 for the brake resistor cable (if used). Cut off extra phase conductors (if any).
10. Not for ACQ580-01.
11. Install the grounding shelf for the control cables.
12. Put the unused rubber grommets to the holes in the lead-through plate.
13. Secure the cables outside the unit mechanically.
14. Ground the motor cable shield at the motor end. For minimum radio frequency interference, ground the motor cable shield 360 degrees at the lead-through of the motor terminal box.

Example of connecting an analog signal cable:

5. Cut an adequate hole into the rubber grommet and slide the grommet onto the cable. Slide the cable through a hole of the bottom plate and attach the grommet to the hole.
6. Ground the outer shield of the cable 360 degrees under the grounding clamp. Keep the cable unstripped as close to the terminals of the control board as possible. Ground also the pair-cable shields and grounding wire at the SCR1 terminal.
7. Route the cable as shown in the figure.

 5. Slide the cable through the hole of the bottom plate and attach the grommet to the hole.
 6. Connect the motor cable:
 - Ground the shield 360 degrees by tightening the clamp of the power cable grounding shelf onto the stripped part of the cable (6a).
 - Connect the twisted shield of the cable to the grounding terminal (6b).
 - Connect the phase conductors of the cable to the T1/U, T2/V and T3/W terminals (6c). Tighten the screws to the torque given in the figure.
 7. Repeat steps [3...5](#) for the input power cable.
 8. Connect the input power cable. Tighten the screws to the torque given in the figure.
 9. Install the cable box plate. Position the plate and tighten the screw.
 10. Reinstall the shroud on the power terminals by putting the tabs at the top of the shroud in their counterparts on the drive frame and then pressing the shroud in place.
 11. Secure the cables outside the unit mechanically.
 12. See figure [R5 Figures F](#) (page 67). Ground the motor cable shield at the motor end. For minimum radio frequency interference, ground the motor cable shield 360 degrees at the lead-through of the motor terminal box.

Connect the control cables

See figure [H](#) on page [68](#). It shows an example with one analog signal cable and one digital signal cable. Make the connections according to the default configuration in use. The default connections of the Water default configuration are shown in section [Default I/O connections](#) on page [50](#).

3. Remove the front cover, if not already removed. See section [Switch off the power and open the cover](#) on page [45](#).

R5

Example of connecting an analog signal cable:

4. Cut an adequate hole into the rubber grommet and slide the grommet onto the cable. Slide the cable through a hole of the bottom plate and attach the grommet to the hole.
5. Ground the outer shield of the cable 360 degrees under the grounding clamp. Keep the cable unstripped as close to the terminals of the control board as possible. Ground also the pair-cable shields and grounding wire at the SCR1 terminal.
6. Route the cable as shown in the figure.
7. Connect the conductors to the appropriate terminals of the control board and tighten to 0.5...0.6 N·m (0.4 lbf·ft).
8. Tie all control cables to the provided cable tie mounts.

Safety

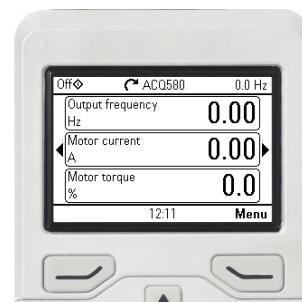

- Make sure that the installation work is complete. Make sure that cover of the drive and the cable box, if included, are on place.
-  Check that the starting of the motor does not cause any danger. **De-couple the driven machine** if there is a risk of damage in case of an incorrect direction of rotation.

Hints on using the assistant control panel

The two commands at the bottom of the display (**Options** and **Menu** in the figure on the right), show the functions of the two softkeys  and  located below the display. The commands assigned to the softkeys vary depending on the context.

Use keys , ,  and  to move the cursor and/or change values depending on the active view.

Key  shows a context-sensitive help page.

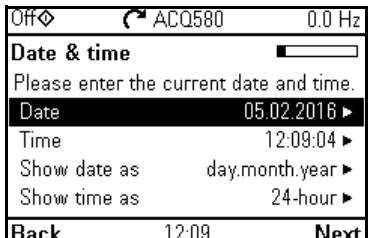

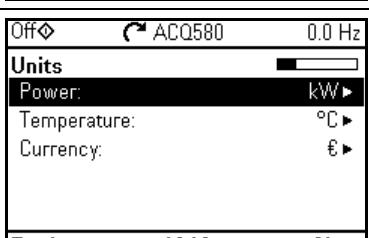

1 – First start assistant guided settings: Language, date and time, and motor nominal values

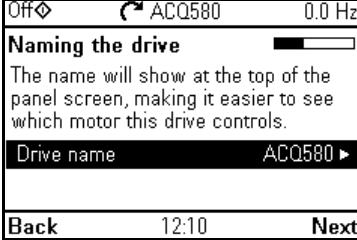

- Have the motor or pump name plate data at hand.
Power up the drive.
