„Gewährleistung und Haftung:

Die in diesem Dokument beschriebenen Anwendungsbeispiele oder enthaltenen Dateien beschreiben eine mögliche Anwendung der AC500 bzw. zeigen eine mögliche Einsatzart. Sie stellen nur Beispiele für Programmierungen dar, sind aber keine fertigen Lösungen. Eine Gewähr kann nicht übernommen werden.

Der Nutzer ist für die ordnungsgemäße, insbesondere vollständige und fehlerfreie Programmierung der Steuerungen selbst verantwortlich. Im Falle der teilweisen oder ganzen Übernahme der Programmierbeispiele können gegen ABB keine Ansprüche geltend gemacht werden.

Die Haftung von ABB, gleich aus welchem Rechtsgrund, im Zusammenhang mit den Anwendungsbeispielen oder den in dieser Datei enthaltenen Beschreibung wird ausgeschlossen. Der Haftungsausschluss gilt jedoch nicht in Fällen des Vorsatzes, der groben Fahrlässigkeit, bei Ansprüchen nach dem Produkthaftungsgesetz, im Falle der Verletzung des Lebens, des Körpers oder der Gesundheit oder bei schuldhafter Verletzung einer wesentlichen Vertragspflicht. Im Falle der Verletzung einer wesentlichen Vertragspflicht ist die Haftung jedoch auf den vertragstypischen, vorhersehbaren Schaden begrenzt, soweit nicht zugleich ein anderer der in Satz 2 dieses Unterabsatzes erwähnten Fälle gegeben ist. Eine Änderung der Beweislast zum Nachteil des Nutzers ist hiermit nicht verbunden.

Es gilt materielles deutsches Recht unter Ausschluss des UN-Kaufrechts."

2 Introduction

2.1 Scope of the document

Calculate the time of operation of any device with an extra function block.
Store this time and the number of starts as retain persistent variable.

In the CP600 these times can be shown and preset. Transfer from and to AC500 is made via several variables for seconds, minutes, hours and total seconds.

2.2 Compatibility

The application example explained in this document has been used with the below engineering system versions. This should also work with other versions, nevertheless some small adaptations may be necessary, for future versions.

- AC500 V2 PLC
- Automation Builder 2.4.1 or newer (export file can be imported in older versions)
- Panel Builder 2.8.1 (447)

2.3 Overview

The screenshot displays the SIMATIC Manager interface for a function block (FB) named FB_TOO_DEV1. The LAD editor on the left shows the function block call with various inputs and outputs. The parameter table in the center-right lists the following values:

Parameter	Value
ON	TRUE
RESET	FALSE
PRESET	FALSE
PRE_SEC	0
PRE_MIN	14
PRE_HOUR	12
PRE_DAY	0
PRE_YEAR	0
SECONDS	40
MINUTES	16
HOURS	12
DAYS	0
YEARS	0
NO_STARTS	3
BATT_WRN	FALSE
BATT_ERR	FALSE

The global variables window shows the following values:

Variable	Value
dw_ToOp	44200
dw_hours	12
dw_minutes	16
dw_seconds	40
t_ToOp	T#736m40s0ms
t_ToOp_TOD	TOD#12:16:40
ul_Pre_Sec	0
ul_Pre_Min	14
ul_Pre_Hours	12
ul_Pre_Days	0
xPreset	FALSE

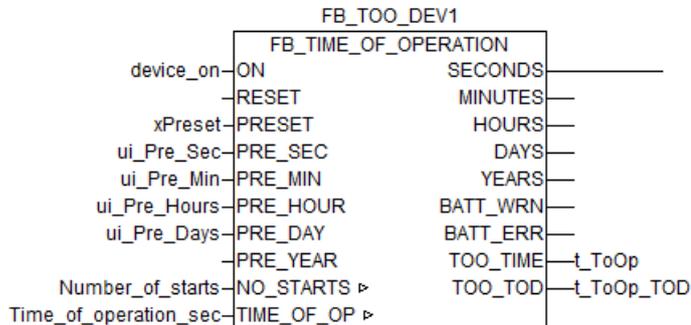

The HMI simulator window on the right shows the following display:

Time of operation
12 : 16 : 40 hh:mm:ss
44200 Seconds total

Preset
0: 12 : 14 : 0 dd:hh:mm:ss [Set]

3 AC500 Program

3.1 Function block “FB_TIME_OF_OPERATION”

3.1.1 DESCRIPTION:

FB for measuring the time of operation of a device.

If ON Input is set the time count starts.

ACCURACY:

The internal time count is done in milliseconds.

Because of tolerances of the real time clock in PLC the calculated value can be up to 0,02% less than real operation time.

This means that the calculated operation time in one year can be 1hour 45min less than real operation time. (8760 h/year)

WARNING:

In_Output TIME_OF_OP must be declared as retain persistent variable to keep the value if PLC is powered off or the program is downloaded. Therefore, a battery must be used. Then only Online\Rest(cold) or input RESET at the FB will set the TIME_OF_OP to zero.

The BATT_WRN and BATT_ERR outputs reflect the battery status.

For AC500-eCo CPUs a battery is not needed.

FB takes STOP of PLC and PowerOn in consideration.

TIME_OF_OP, time of operation is counted in seconds. Maximum value reflects more than 136 years.

A visualization element VIS_TIME_OF_OPERATION is prepared to show values or preset time of operation. Use this element in a separate visualization and configure "Placeholder" to instance of FB_TIME_OF_OPERATION which you want to visualize.

RESTRICTIONS: use battery to keep value in case of power down or new download of program! AC500-eCo do not need to have battery.

3.1.2 Inputs

ON: **BOOL** := FALSE; (* device is in operating mode - timer counts *)
 RESET: **BOOL** := FALSE; (* resets the time of operation to zero. Overwrites any PRESET value and set ON-input internal to FALSE *)
 PRESET: **BOOL** := FALSE; (* set time of operation to value defined at PRE_VAL_x *)
 PRE_SEC: **UINT** := 0; (* preset value for time of operation - seconds *)
 PRE_MIN: **UINT** := 0; (* preset value for time of operation - minutes *)
 PRE_HOUR: **UINT** := 0; (* preset value for time of operation - hours *)
 PRE_DAY: **UINT** := 0; (* preset value for time of operation - days *)
 PRE_YEAR: **UINT** := 0; (* preset value for time of operation - years (365 days *)

3.1.3 In_Outputs

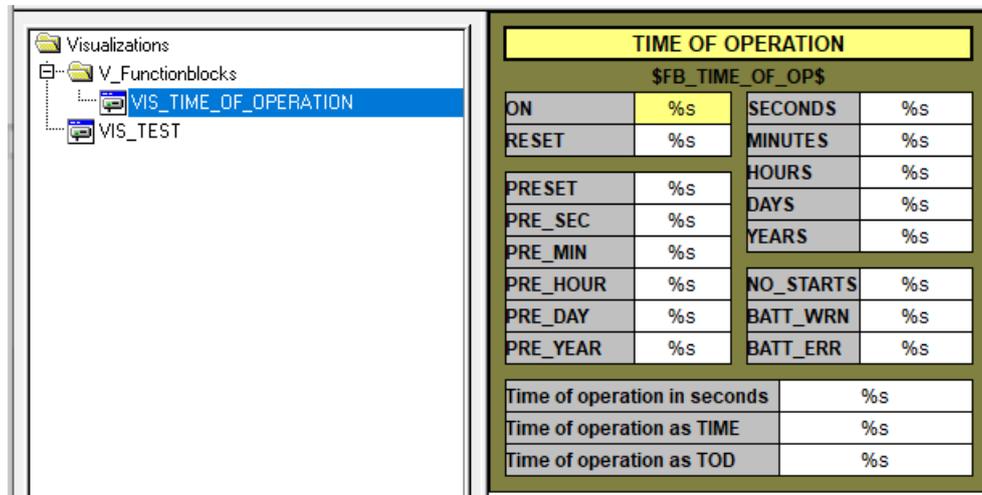

NO_STARTS: **UDINT**; (* number of starts - includes Starts of PLC program *)
 TIME_OF_OP: **DWORD**; (* time of operation in seconds *) (* should be stored as permanent resistant variable in main program *)

3.1.4 Outputs

SECONDS: **UINT** := 0; (* seconds of time of operation *)
 MINUTES: **UINT** := 0; (* minutes of time of operation *)
 HOURS: **UINT** := 0; (* hours of time of operation *)
 DAYS: **UINT** := 0; (* days of time of operation *)
 YEARS: **UINT** := 0; (* years of time of operation *)
 BATT_WRN: **BOOL** := FALSE; (* battery warning: charge is below 20%. Battery should be changed *)
 BATT_ERR: **BOOL** := FALSE; (* battery empty - values will reset in case of power down or new download *)
 TOO_TIME: **TIME**; (* time of operation in TIME format - hh:mm:ss,ms *)
 TOO_TOD: **TOD**; (* time of operation in TOD format - hh:mm:ss,ms *)

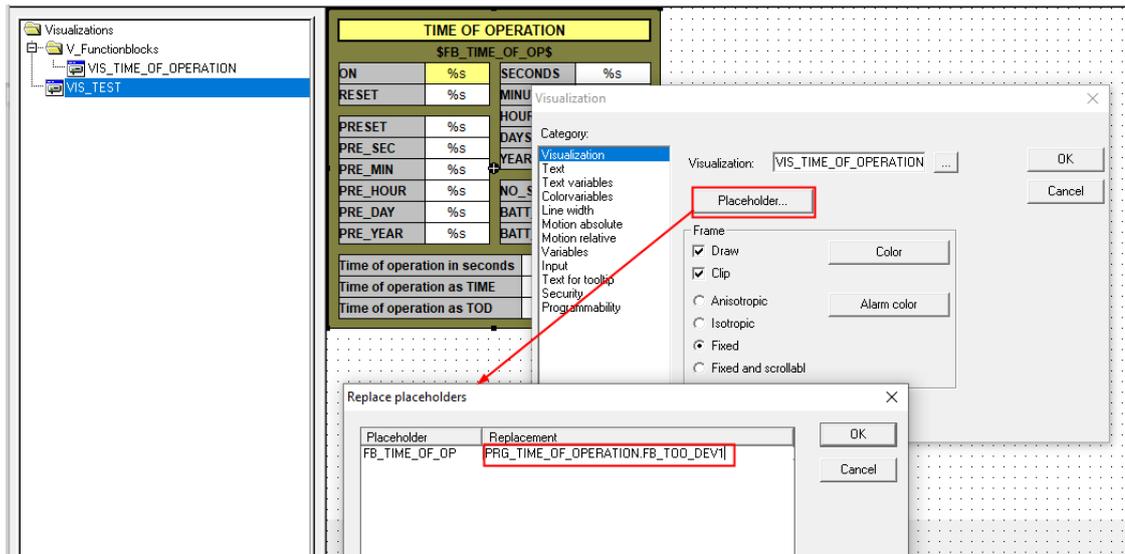

3.2 Visualization in CoDeSys

Webvisu template can be used to check and control and function block.

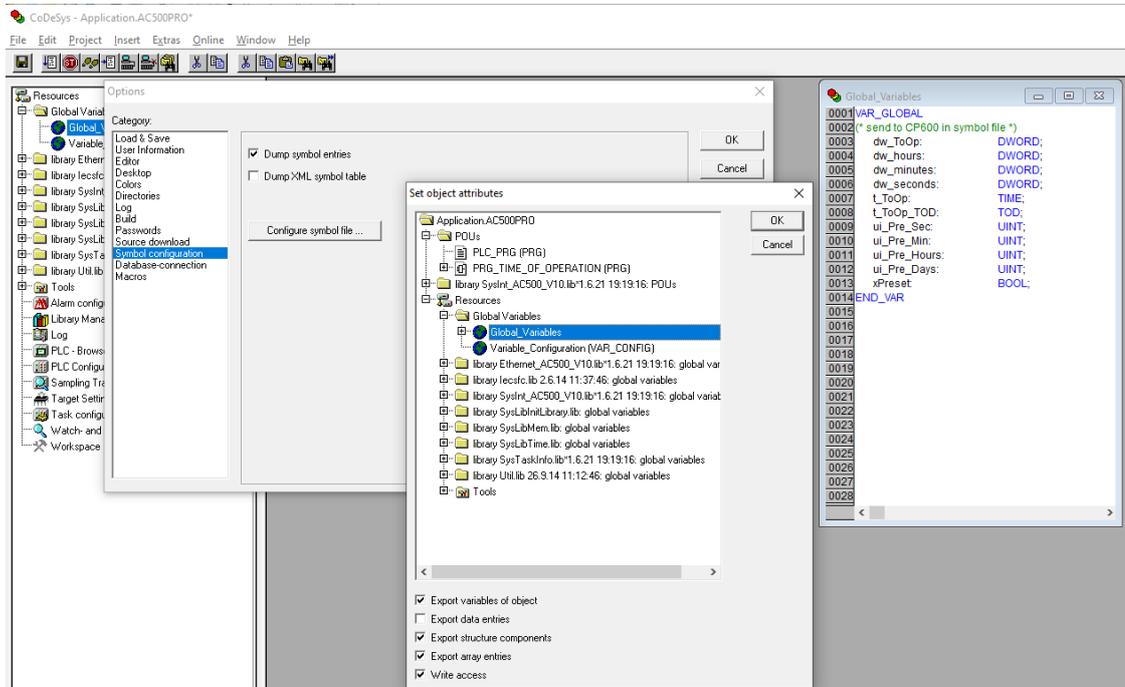

Set the placeholder to the instance of the block that should be visualized.

Inputs, which are not set in the program can be set from the visualization.

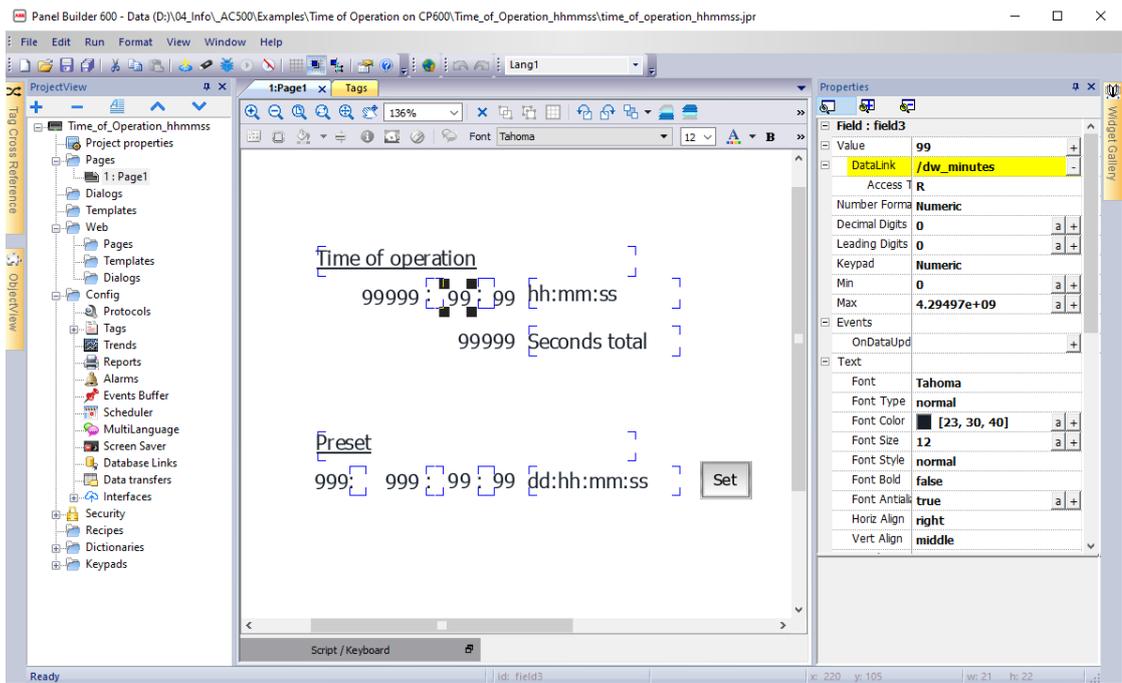

3.3 Symbol configuration for variables for CP600

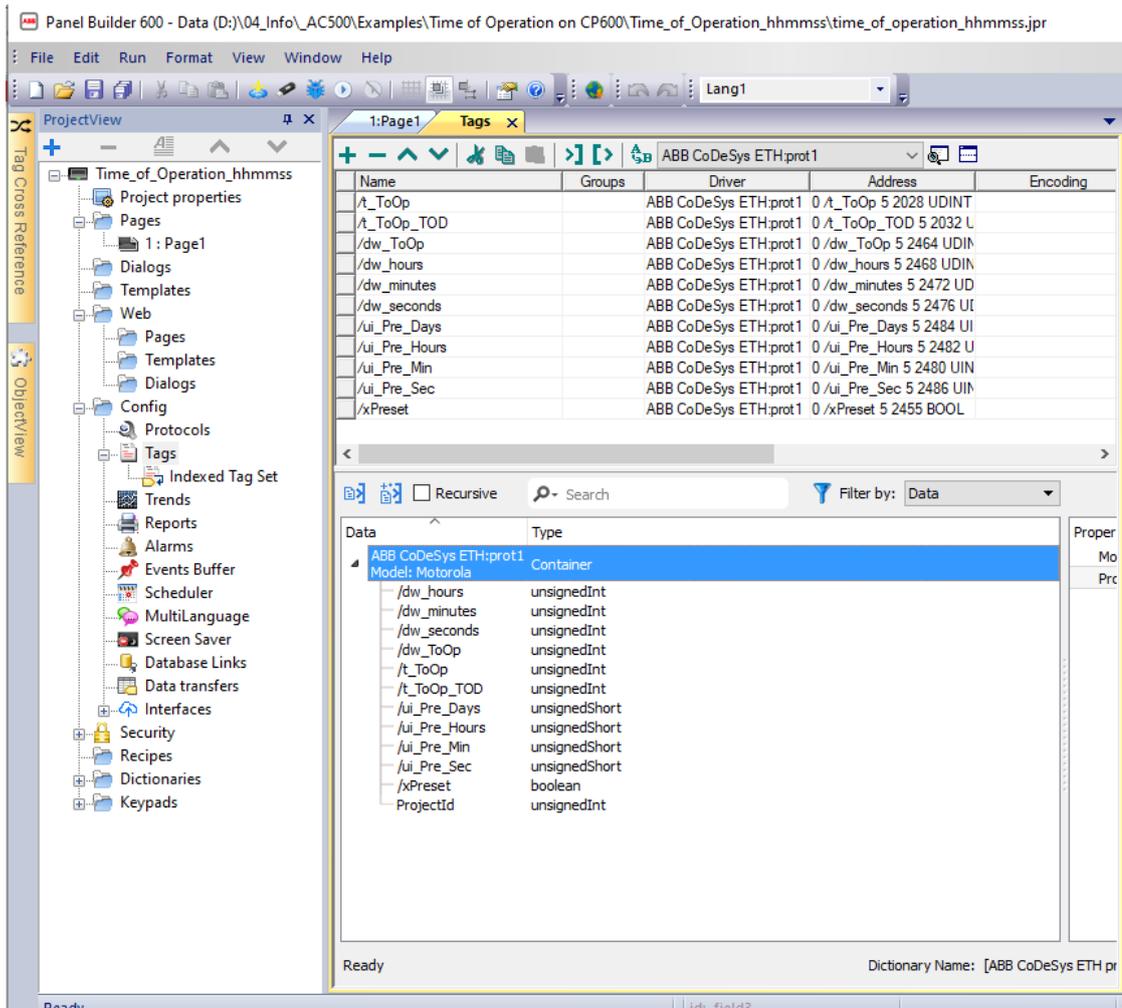

4 CP600 Project

4.1 Configuration

Main Page showing the actual time of operation and possibility to preset any time

Tags

4.2 Online Simulation

Time of operation

12 : 46 : 13 hh:mm:ss

45973 Seconds total

Preset

0: 12 : 14 : 0 dd:hh:mm:ss

5 Distribution

5.1 Application project

The application program is available as Automation Builder 2.4.1 for an PM590-ETH and Panel Builder 2.8.1 (447) project for a CP635 with just one page and few tags.

This can be upgraded to any newer Automation Builder and the PLC type and CP600 type can also be changed without any disadvantages.

5.2 Export file

TIME_OF_OPERATION.exp for CODESYS 2.3.9 IEC61131 programming editor.

Use Project > Import function to integrate in your already existing project.

This includes the following parts:

- POU's
 - o Program: PRG_TIME_OF_OPERATION including the
 - Function block FB_TIME_OF_OPERATION
- Visualizations
 - o VIS_TIME_OF_OPERATION (template)
 - o VIS_TEST including the call of VIS_TIME_OF_OPERATION with the needed placeholder
- Global Varlist
 - o Global_Variables including the variables to be exchanged with CP600
