

ACS355

0.5 to 30 hp (0.37 to 22 kW)

The ABB machinery drives are designed to be fast drives to install, parameter-set and commission. Thus saving hours of engineering work. They are highly compact and cost effective and equipped with cutting-edge intelligence and an innovative safety capability. The drives are designed specifically to meet the production and performance needs of system integrators, original equipment manufacturers (OEMs) and panel builders, as well as the requirements of end users in a broad range of applications.

Highlights

- Worldwide availability and service
- Exceptionally compact drives and uniform design
- Quick commissioning with application macros and panel assistants
- Safe torque off function (SIL 3) as standard
- Sensorless vector control
- Built-in brake chopper
- High protection class variants for demanding environments
- Permanent magnet and induction motor control
- Torque memory for lifting applications
- Common DC bus
- 600 Hz maximum output frequency
- Sequence programming for controlling state machines without a PLC

Saving time in installation and commissioning

The drive's compact and uniform dimensions facilitate multiple drive solutions and cabinet installations. Different mounting options enable flexible installation in restricted spaces. With the FlashDrop tool the drive can be preconfigured in seconds without powering the drive. The drive's application macros and assistants enable fast and easy commissioning.

Saving cost with cutting-edge intelligence and flexibility

Up to eight preset sequences of operations can be created in minutes with the drive's PC tool to reduce the need for external PLC components. Versatile fieldbus connectivity to most PLCs on the market is also available. The drive includes Safe torque-off function as standard helping machine builders to fulfill the latest machinery directives. Additional features include Speed Compensated Stop. This makes the drive ideal for material handling applications that require precision stopping that is independent of variations in process speed. For demanding environments high protection class variants are available in IP66/IP67/UL Type 4X classes that are NSF certified.

Application specific firmware variants available:

- High speed spindle
- Enhanced sequence programming
- Solar pump drive
- Low ambient start
