# 1 Introduction

## 1.1 Description

The TLE Series 160 to 250 Uninterruptible Power Supply (UPS) is a three-phase high power product with best-in-class multi-mode efficiency for global critical power needs.

The TLE Series 160 to 250 platform establishes ABB UPS technology leadership in high power applications with industry leading differentiation in efficiency, output power capacity and footprint.

ABB's TLE Series 160 to 250 is one of the most energy efficient multi-mode UPS in the industry and provides world-class energy efficiency across the operating load range.

The TLE Series 160 to 250 delivers efficiency up to 96.5% in double conversion mode and 98.9% in eBoost™ operating mode.

This system efficiency substantially reduces operating and cooling costs thus providing a reduced cost of ownership and improved power usage effectiveness (PUE) compared to conventional UPS.

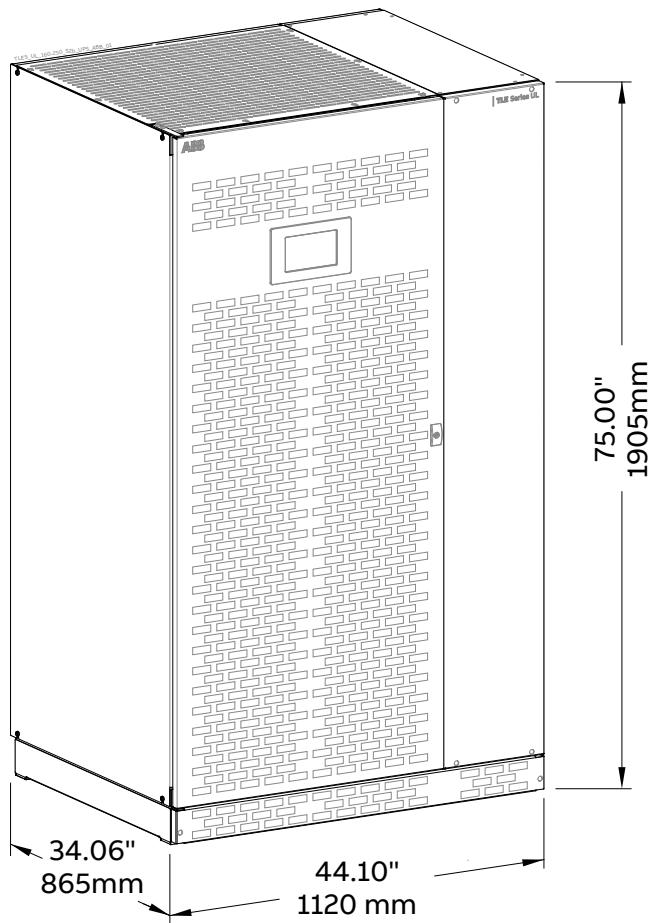

Reliability & power can be further increased by paralleling up to 6 units utilizing ABB's unique RPA\* (Redundant Parallel Architecture) technology.

## 1.2 Key features and benefits

<b>RPA™</b>	Redundant, reliable and scalable power up to 1500kW thanks to the Redundant Parallel Architecture (RPA) providing redundancy of power (N+1), control and communications.
