Release 7.0.0.0087

What's New

- Available the new Italian RR 2011-06 price list

Release 7.0.0.0083

What's New

- The Accessories Selection Tools allows also the selection of components reported in grey (available but locked by a component present in the basket).
- A component can now be added to the basket even by double click on the description in the Detail section.
- "Search a product for" window improvement: when the user switches to a selection mask by double click and adds the component to the basket, the application now goes back to the window "Search a product for" (instead of closing).

- Function "Search a product for" (by Code criteria): the products can now be identified and added to the basket in a more quickly way using only the keyboard.
- Function "Search a product for": the search criteria (code, description...) can be selected also by clicking the text box (in addition to the radio button).
- It now possible renaming a switchboard in CAT and getting the new name in DOC.
- Improved the layout of the .xls file exportable by the command "Export - Export in MS Excel format".
- Available the new function which allows to add components in the project by importing a .xls file by the command "Import - Import a code list from a MS Excel workbook".
- CAT Options - Discount profiles; available two different discount families for automation and distribution boards in the IT database.
- Product lifecycle management for IT database: (switch disconnectors, E210 - E220 devices, RCDOs, MS132).
- Added Industrial devices to the International databases (Contactors, Thermal relays, MMS, pushbuttons).

Fixed Bugs

- Fixed the timeout exception error: CAT shows an error message during the importation of the codes list from DOC.
- Fixed prices (IT database) for Clinos components.
- Fixed the error on the Miniature circuit breakers selection mask: it sometime made available at first the "Loose Accessories" tab.

Release 7.0.0.0080

What's New

- Added German translations.

Release 7.0.0.0079

What's New

- Added the 2011 German price list
- Added the *Restore* button.
- The list of the clients arranged in alphabetical order.

Fixed Bugs

- Fixed the missing refresh of discount values coming back from DOC. CAT now shows properly the discounts values when imports codes list from DOC.
- Fixed the problem of component selections in some system installing Win 7. All the system installing Win 7 can now manage properly the component selections functions.
- Fixed the problem occurred calling the *Modify* function on copied configurations. The user can now copy and paste any configuration and then call the *Modify* function and CAT keeps the relationship between moving part and fixed part.

Release 7.0.0.0075

What's New
