secure@home App

Release Note mobile application

Product name	secure@home Central Units with GSM (View Website)
Product types	SAS-W1.1E / SAS-W1.11E SAS-W1.1F / SAS-W1.11F
Current version	2.0 (Download here: iOS version or Android version)

ABB releases the secure@home App for ABB-secure@home security line central units.

The App is compatible also with the already existing DomusTech Free and Domus Link central units, substituting the previous version "DomusTech". The iOS version will be automatically replaced updating the old App, while Android requires downloading the new one. The installation info needs to be reset on the new secure@home App.

secure@home App 2.0

The App generates and sends SMS to the central units equipped with GSM module, to make the communication via SMS even easier (e.g. for arming, disarming the system or request for its status).

It includes:

- Initial App settings and new installation creation (secure@home/DomusTech Free/DomusLink);
- Favorites selection;
- SMS generation while pressing on the desired command.

The application is only for smartphone, not for tablet, and it needs a SIM card with credit to be able to send SMS.
