

# Product Life Cycle Announcement

## AV-3 UL 891 Switchboard

This notice is to inform customers that ABB will cease production of the **AV-3 Switchboard** using the Spectra molded case circuit breaker. This decision aligns with the ABB equipment initiative to incorporate the cutting-edge Tmax® molded case circuit breaker and Ekip trip unit technology with all ABB switchboard platforms. **PowerBreak Switchboard will continue in active production as part of the Burlington UL 891 offering**, using Power Break II (ICCB) breakers up to 4000A and keeping the robust capabilities of switchgear construction.

Please review the timeline below and contact your ABB sales and product marketing support to review alternative solutions to the AV-3 switchboard using the PowerBreak Switchboard, ReliaGear SB, and AKD20/ReliaGear LV SG product lines.

### LIFE CYCLE CHANGE SCHEDULE

	Classic	Last Order Date	Limited	Obsolete
<b>AV-3 Switchboard</b>	10/2/20	10/2/20	3/2/21	9/2/21
	Last Time Quote	Final Release for Manufacture	Final Shipment	
	09/14/20	11/27/20	Project Specific	

Once production of AV-3 Switchboard ceases, the Limited life cycle will begin. During this process, **the AV-3 product line will be supported by renewal parts and technical support for ten years**, or as long as feasible. The length of time for continued support after obsolescence is dependent upon numerous items, including supplied parts and components, design automation tools, test equipment, technical expertise, and manufacturing facility.
