# DIN-Rail components for rolling stock

- Rolling stock dedicated fire- & smoke- protective material ensure passenger & personal safety
- Vibration- and shock-tested and approved products of highest quality
- Extensive range of accessories ensures installation flexibility and fulfills requirements of all applications

**Rail is being rediscovered as a sustainable and energy-efficient form of transport. We understand the importance and implications of running these railway networks. We provide complete solutions that protect your infrastructure, and meet the expectations of users and transport stakeholders.**

**When it comes to passenger stations and buildings, the key focus areas are energy efficiency, safety and security, and building automation.**

# Introduction

Urban and interurban mobility needs are constantly increasing and represents one of the main challenges for cities and countries. We are committed to contribute to the development of the "Sustainable Mobility" by providing our expertise for reliable, efficient, environmental friendly transportation solutions for Rolling Stock.

The requirements for railway applications are increasing and will continue to do so. The task is to implement even faster connections, while also increasing traveler comfort. During their everyday work, the trains are exposed to very high environmental, electrical and mechanical loads. This means a constant stream of new, increased and standardized safety standards for rolling stock and rail infrastructure solutions.

By developing solutions and products which are innovative, reliable, safe and easy to install, we are consistently meeting the high standard of safety expectations for transportation"

### ABB supports the high levels of expectations for a safe means of transport

ABB is a market leader in supplying innovative and reliable technologies for train manufacturers and railway operators. We help to keep the world moving with new sustainable approaches that enable customers to use energy effectively, creating a low carbon transportation industry that operates with maximum efficiency and reliability. We are present in more than 100 countries and we can provide strong local support to your project. With a truly global organization, we are committed to local competence and local service. We also support transport operators throughout the whole life cycle of the traction chain, i.e. in the areas of service, maintenance, upgrades, and retrofit projects.

### IRIS certification

In 2005, the IRIS Group was established as a UNIFE Group with the goal of securing higher quality in the railway industry. This was to enhance supra-national competition by enabling any railway component supplier to meet globally recognized levels of quality for its railway components. The aim of IRIS is to develop and implement a global system for the evaluation of companies securing a very high quality in the railway industry. The IRIS system defines requirements in content, procedures and evaluation of audits as well as a requirement profile for the certification bodies and auditors.

ABB IRIS certified factories are listed on the IRIS internet portal: [iris-rail.org/index.php](http://iris-rail.org/index.php)

## Introduction

### Railway reference standards

#### Fire safety and general requirements

The use of DIN rail modular devices in rolling stock is subject to the highest possible safety standards. And thus compliance with special standards. In this regard, the key standards are:

- EN 45545 – Railway applications – Fire protection on railway vehicles.
- EN 50155 – Railway applications – Rolling Stock – Electronic equipment.
- IEC 61373 – Railway applications – Rolling stock equipment – Shock and vibration tests.

#### Fire and smoke protection standard EN 45545

This standard has been developed from existing fire safety regulations for railway vehicles from the International Union of Railways (UIC) and different European countries. The measures specified in standard EN 45545 are intended to protect passengers and staff in case of a fire on board. The reaction to fire performance requirements of materials and components depend on their intrinsic nature but also:

- on the location of the materials or components within the design;
- on the shape and the layout of the materials;
- on the surface exposed and the relative mass and the thickness of the materials.

It is on this basis that the listed products have been classified and further differentiated into subgroups as follows:

their general location (interiors or exteriors);

their specific use (furniture, electrotechnical equipment or mechanical equipment).

DIN-Rail devices are classified, according the following table:

Product No.	Name	Details	Requirements
E	Electrotechnical equipment		
EL10	Low power electrotechnical products	Examples include low power circuit breakers, overload relays, contactors, contactor relay, switches, control or signalling switches, terminals, fuses	R26

Note: All ABB devices available on this catalogue meet R26 requirements.

The set of requirements defines the ability of products to contain fire development to an appropriate degree considering the location, the exposed surfaces, their geometry and general disposition.

Requirements for R26 level are described in the chart below:

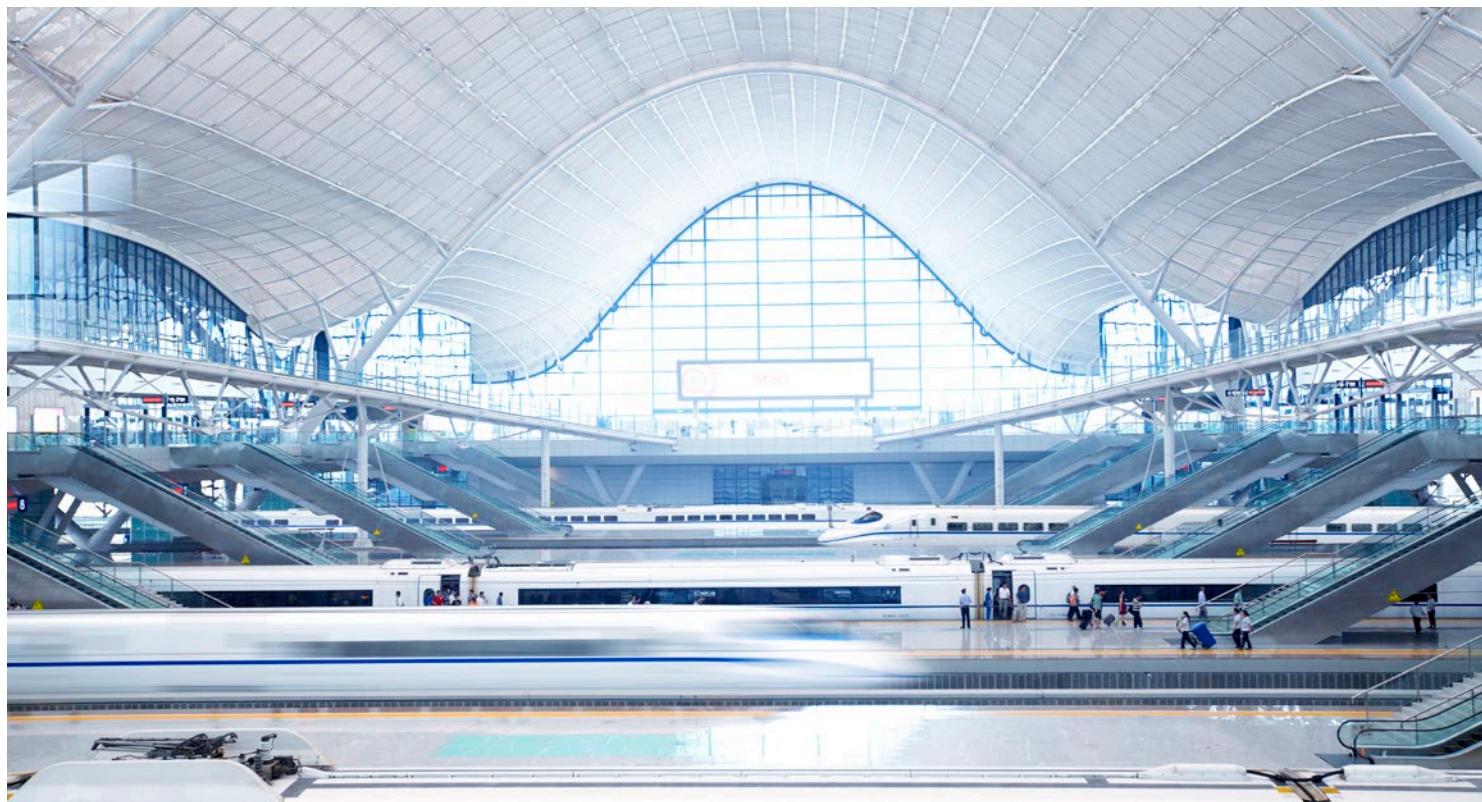

Short name of requirement set (used for)	Test method reference	Parameter Unit	Maximum or Minimum	HL1	HL2	HL3
R26 (EL10)	T17 EN 60695-11-10	Vertical small flame test	Minimum	V0	V0	V0

The design of rolling stock and the products used shall incorporate the aim of limiting fire development in case an ignition event occurs so that an acceptable level of safety is achieved. In the event of a fire, passengers and staff will be able to escape from the fire unaided and be able to reach a place of safety. The operation and design categories defined in EN 45545-1 are used to establish hazard levels that are used as the basis of a classification system.

Hazard levels have been determined according to the operating categories of a train and how the train itself is conceptualized. The operating conceptions are divided into four different types starting with standard vehicles to trains with sleeping cars. These trains usually operate in different operating environments. According to EN 45545, there are four types of environments depending on the distance a train is travelling inside tunnels. The combination of those two criteria is decisive for the „Classification of the Hazard Level“. Below you find a matrix that indicates the hazard level of the different combinations of operating conceptions in combination with the train type.

Train types	Tunnel length	Operating Conceptions			
		N	A	D	S
		Standard vehicles	Automatic vehicles without staff on board	2 level vehicles	Sleeping cars 2 levels or 1 level
1	< 1 km	HL1	HL1	HL1	HL2
2	< 5 km	HL2	HL2	HL2	HL2
3	> 5 km	HL2	HL2	HL2	HL3
4	> 5 km no side evacuation	HL3	HL3	HL3	HL3

Note: ABB DIN-Rail modular devices for rolling stock application are classified with the highest hazard level HL3.

## Introduction

Railway reference standards

### Shock and vibration tests IEC 61373

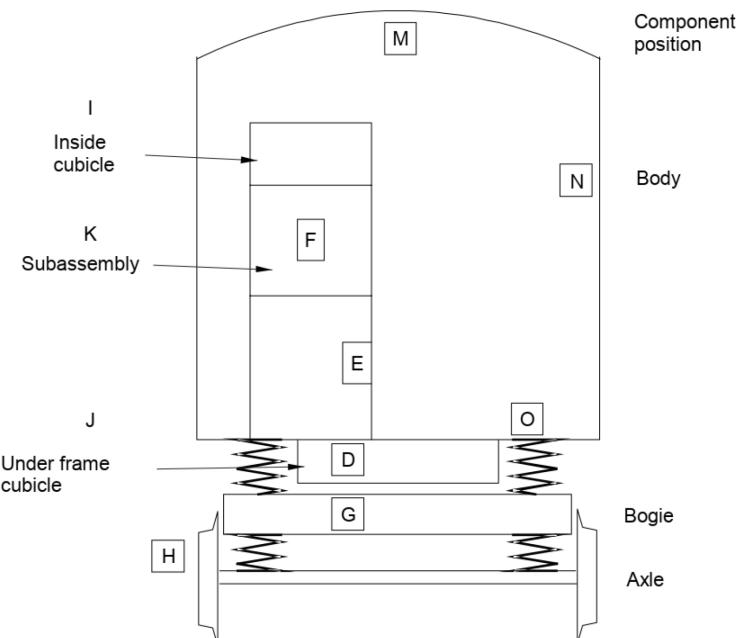

This International Standard specifies the requirements for testing items of equipment intended for use on railway vehicles which are subsequently subjected to vibrations and shock owing to the nature of railway operational environment. To gain assurance that the quality of the equipment is acceptable, it has to withstand tests of reasonable duration that simulate the service conditions seen throughout its expected life.

The test values quoted in this standard have been divided into three categories dependent only upon the equipment's location within the vehicle Category 1 – Body mounted;

Category 2 – Bogie mounted (cubicles, subassemblies, equipment and components which are to be mounted on the bogie of a railway vehicle) and Category 3 – Axle mounted (subassemblies, equipment and components or assemblies, which are to be mounted on the wheelset assembly of a railway vehicle).

For line protection devices the Category 1 is requested. Category 1 can be divided into 2 subgroups, according to the location of the components:

- Class A: cubicles, subassemblies, equipment and components mounted directly on or under the car body.
- Class B: Anything mounted inside an equipment case which is in turn mounted directly on or under the car body. Category B should be used when it is not clear where the equipment is to be located.

IEC 1108/10

Category	Location	Description of equipment location
1 Class A	M N O I and J	Components which are mounted directly on to or under the car body
1 Class B	D	Components mounted into an underframe cubicle which is in turn fixed to the car body
1 Class B	K and E	Components mounted into a large internal cubicle which is in turn fixed to the car body
1 Class B	F	Components mounted into subassemblies which are in turn mounted into a cubicle which is in turn fixed to the car body
2	G	Cubicles, subassemblies, equipment and components which are mounted on the bogie of a railway vehicle
3	H	Subassemblies, equipment and components or assemblies which are mounted on to the axle assembly of a railway vehicle

All ABB products available in this catalogue are not only compliant with the main standards for the railways sector but fulfill the requirements of the most important and demanding international standards for household and industrial installations. The scope of these standards is reported below:

- **IEC/EN 60898-1:** applies to a.c. air-break circuit-breakers for operation at 50 Hz or 60 Hz, having a rated voltage not exceeding 440 V (between phases), a rated current not exceeding 125 A and a rated short-circuit capacity not exceeding 25000 A. These MCBs are intended for the protection against overcurrents of wiring installations of buildings and similar applications; they are designed for use by uninstructed people and for not being maintained.
- **IEC/EN 60898-2:** gives additional requirements for circuit-breakers which are suitable for operation with direct current, and have a rated d.c. voltage not exceeding 220 V for single-pole and 440 V for two-pole circuit-breakers, a rated current not exceeding 125 A and a rated d.c. short-circuit capacity not exceeding 10 000 A.
- **IEC/EN 60947-2:** applies to low voltage circuit breakers (MCBs) for use in industrial and similar applications. In particular the standards refer to circuit-breakers, the main contacts of which are intended to be connected to circuits, the rated voltage of which does not exceed 1000 V AC or 1500 V DC; it also contains additional requirements for integrally fused circuit-breakers.
- **IEC/EN 61009:** apply to residual current operated circuit breakers with integral overcurrent protection for household and similar uses (RCBOs), for rated voltages not exceeding 440 V AC with rated frequencies of 50 Hz, 60 Hz or 50/60 Hz and rated currents not exceeding 125 A and rated short circuit capacities not exceeding 25000 A for operation at 50 Hz or 60 Hz.
- **GOST 9219-88 – Electrical Traction Devices – General Requirements:** Another important standard for the traction railways sector is the “GOST 9219-88 – Electrical Traction Devices - General Requirements”, a local standard for the Russian market. This approval is required for the development of the trains that will travel in Russia. This Standard applies to electrical traction devices designed for operation on rolling stock of rail transport or on trolley buses. It does not apply to electrical traction devices operating in explosive or chemically corrosive environments.

## MCB S 200 MT, S 200 MT UC and S 200 P. The details make the difference

A range designed for rolling stock equipments

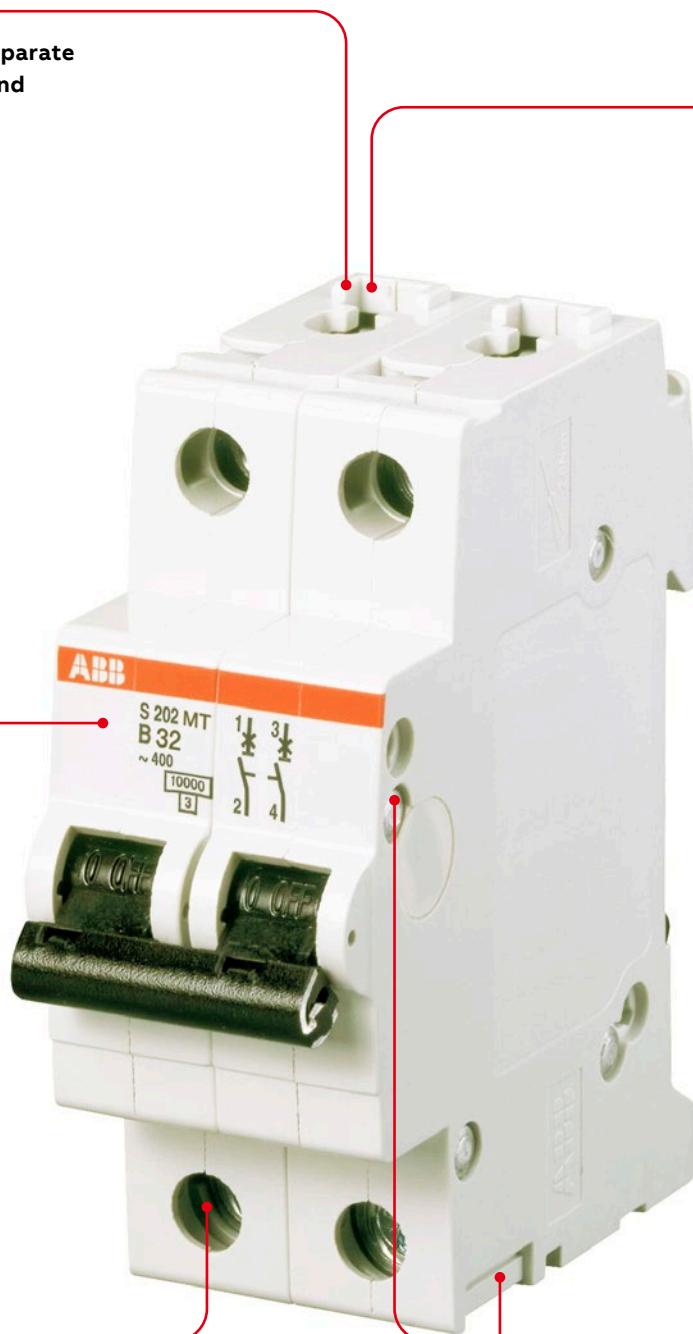

Twin terminal for separate feeding of busbar and conductor.

IP20 - finger safety.

Easy product name, easy identification, easy life.

Captive screws: don't loose what's important for you.

Wide range of accessories are available for rolling stock and rail infrastructure applications

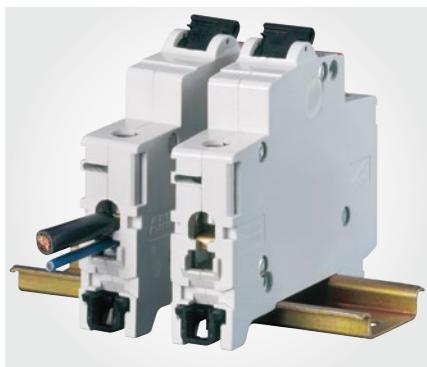

**Dedicated materials for rolling stock**  
In the S200 range of MCBs for traction, specific materials are used that are classified with an hazard level R26/HL3 according to EN 45545-2.

**Shock and vibration resistance**  
Additionally to the high quality standards and the flammability requirements, rail applications have specific demands that have to be fulfilled like resistance to shocks and vibrations. The resistance to vibrations and shocks of MCBs S 200 has been positively tested according to: IEC 61373 Rolling stock equipment – Shock and vibration tests considering Category 1, Class A and Class B.

**Open to all sides**  
All devices can be supplied from top or bottom either with cables or busbars. Can be mounted flexibly in all positions.

**High-quality terminal system**  
The integrated captive terminals and cable connection screws facilitate every electrician's life. ABB guarantees highest safety standards. The certification according to EN 41140 stands for protection against electric shock. And the certification according to the DIN EN 50 274 stands for terminals that are safe from touch by the back of the hand and the finger (IPXXB or IP20). The high safety standards become clear through the integrated and failsafe cable connecting terminals.

**Contact position indication**  
All System pro M compact® MCBs are suited with a contact position indication (CPI) on the toggle. You can easily identify if the MCB is in the ON or the OFF position – easy and safe maintenance work is possible.

**Advanced features**  
Auxiliary switches S2C-H10 (1 NO) and S2C-H01 (1 NC) and all S2C accessories can be retrofitted. They can be mounted individually and without modification of the existing busbar. At the same time, the supply of the MCB remains unaffected.

S 200 series MT, K characteristic

S 201 MT

S 202 MT

### S 200 MT, K (power) characteristic

Function: protection and control of the circuits like motors, transformer and auxiliary circuits, against overloads and short-circuits.

Advantages: no nuisance tripping in the case of functional peak currents up to  $10 \times I_{n}$ , depending on the series; through its highly sensitive thermostatic bimetal trip, the K-type characteristic offers protection to damageable elements in the overcurrent range; it also provides the best protection to cables and lines.

**Standards: IEC/EN 60947-2**

**Hazard level R26/HL3 according to EN 45545**

**Category 1 - Class A/B (Body mounted) according to IEC 61373**

**$I_{cu}=15 \text{ kA}$  for  $0.5 \text{ A} \leq I_n \leq 40 \text{ A}$**

**$I_{cu}=10 \text{ kA}$  for  $50 \text{ A} \leq I_n \leq 63 \text{ A}$**

## MCBs

S 200 series MT UC, Z characteristic  
Universal current range

S 201 MT UC

S 202 MT UC

### S 200 MT UC, Z characteristic

Function: protection and control of the circuits against overloads and short-circuits; protection for people and big length cables in TN and IT systems; version dedicated to application in direct current circuits for voltages up to 220 V DC 1 pole and 440 V DC 2, 3 and 4 poles.

**Standards: IEC/EN 60947-2**

**Hazard level R26/HL3 according to EN 45545**

**Category 1 - Class A/B (Body mounted) according to IEC 61373  
(for DC applications, please note polarity of device)**

**Function:** protection and control of the circuits against overloads and short-circuits; protection for circuits which supply loads with high inrush current at the circuit closing (LV/LV trans-formers, breakdown lamps).

**Standards:** IEC/EN 60898-1

**Hazard level R26/HL3 according to EN 45545**

**Category 1 - Class A/B (Body mounted) according to IEC 61373**

**Icn=25 kA for 0.5 A ≤ In ≤ 25 A**

**Icn=15 kA for 32 A ≤ In ≤ 63 A**

## MCBs

S 200 series P, K characteristic

S 201 P

### S 200 P, K (power) characteristic

Function: protection and control of the circuits like motors, transformers and auxiliary circuits, against overloads and short-circuits.

Advantages: no nuisance tripping in the case of functional peak currents up to  $10 \times I_n$ , depending on the series; through its highly sensitive thermostatic bimetal trip, the K-type characteristic offers protection to damageable elements in the overcurrent range; it also provides the best protection to cables and lines.

**Standards: IEC/EN 60947-2**

**Hazard level R26/HL3 according to EN 45545**

**Category 1 - Class A/B (Body mounted) according to IEC 61373**

**Icu=25 kA for  $0.5 \text{ A} \leq I_n \leq 25 \text{ A}$ ; Icu=15 kA for  $32 \text{ A} \leq I_n \leq 63 \text{ A}$**

## Notes

## High Performance MCB S800S

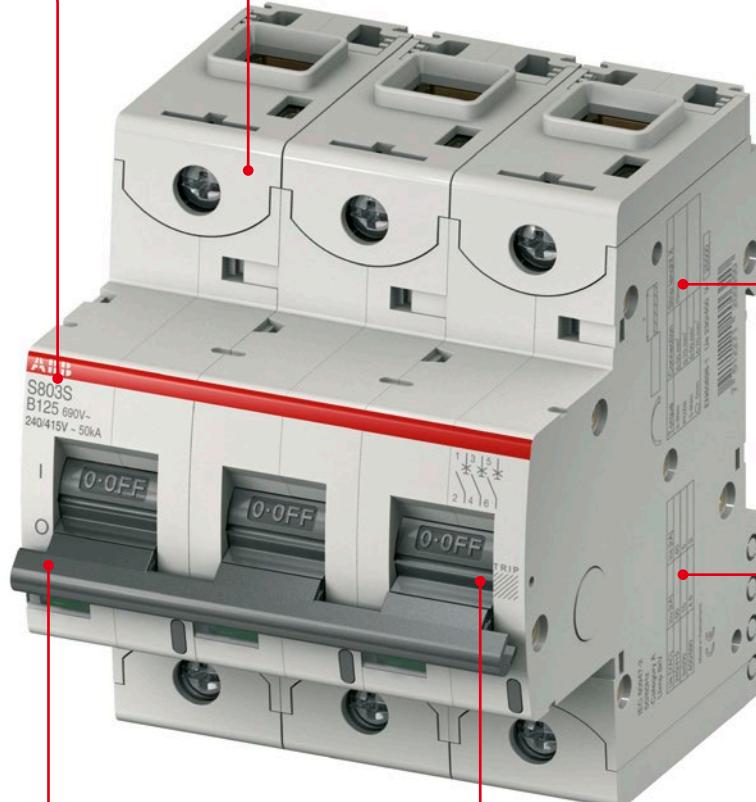

Incomparable performances to meet the demand in rolling stock equipment

Interchangeable terminal,  
failsafe cage or ring lug  
terminal

Quick identification of  
technical characteristics  
thanks to laser-printing of  
all data

Easy product name,  
easy identification,  
easy life.

Wide range of  
accessories to enlarge  
product functionality

Clear identification of the  
moving contact position  
thanks to toggle  
identification ON/OFF and  
TRIP position

Clear identification of the  
reason of cut-off thanks to  
TRIP position of the toggle

#### Housing materials

In the S800 range of MCBs for traction, specific materials are used that are classified with an hazard level R26/HL3 according to EN 45545-2.

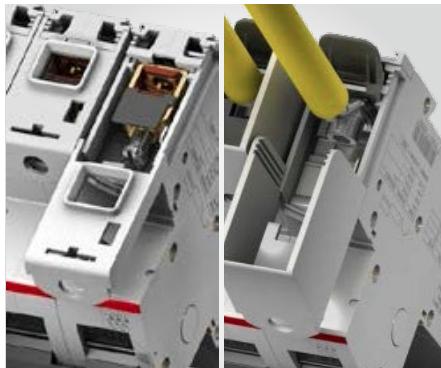

#### Shock and vibration resistance

Additionally to the high quality standards and the flammability requirements, rail applications have specific demands that have to be fulfilled like resistance to shocks and vibrations. The resistance to vibrations and shocks of S800 has been positively tested according to: IEC 61373 – 2010 – 05 Edition 2.0 Rolling stock equipment – Shock and vibration tests considering Category 1, Class A and Class B.

#### Play it safe: display the operational state

The mechanical drive of the S800 high performance MCB is equipped with a trip-free release. The trip position display thereby always reliably displays the exact position of the moving contact. The trip position provides additional trip detection allowing to easily identify the reason for the cut-off. The switch lever moves to the middle position in case of thermal or magnetic tripping.

#### Cage and ring terminals

The S800 standard equipment with interchangeable terminal adapter for wires, cables and rigid conductors guarantees a high level of flexibility and comfort. Fast and safe connection of the conductors is ensured by the “onboard terminal shutter” integrated into the body of the terminal, thereby preventing incorrect underclamping of the connections.

#### Reliable: the disconnector properties

In OFF position (0 position), the S800 high performance MCB guarantees safe electrical isolation of the circuit compliant to IEC 60947-2.

#### Wide range of accessories

S800 MCB range is completed with a wide range of accessories that enlarge the functions of the MCB not only as a protection devices, but even for control and monitor remotely the installation. The range of accessories include auxiliary contacts, aux/signal contacts, remote switching unit, short circuit limiter, shunt operation releases, undervoltage releases and busbars.

## MCBs

S800S series with cage terminal, K characteristic  
High performance MCBS

S801S

### S800S, K characteristic

**Function:** protection and control of the circuits like motors, transformer and auxiliary circuits, against overloads and short-circuits when a high breaking capacity is required; very useful when selectivity is needed vs an MCCB or back-up vs other MCBS wired downstream,  
**Advantages:** no nuisance tripping in the case of functional peak currents up to  $10 \times I_{n}$ , depending on the series; through its highly sensitive thermostatic bimetal trip, the K-type characteristic offers protection to damageable elements in the overcurrent range; it also provides the best protection to cables and lines,

**Standards: IEC/EN 60947-2**

**Hazard level R26/HL3 according to EN 45545**

**Category 1 - Class B (Body mounted) according to IEC 61373**

## MCBs

S800S series with ring terminal connection, K characteristic  
High performance MCBs

S801S

S802S

### S800S, K characteristic

**Function:** protection and control of the circuits like motors, transformer and auxiliary circuits, against overloads and short-circuits when a high breaking capacity is required; very useful when selectivity is needed vs an MCCB or back-up vs other MCBs wired downstream.

**Advantages:** no nuisance tripping in the case of functional peak currents up to  $10 \times I_{n}$ , depending on the series; through its highly sensitive thermostatic bimetal trip, the K-type characteristic offers protection to damageable elements in the overcurrent range; it also provides the best protection to cables and lines.

**Standards:** IEC/EN 60947-2

Hazard level R26/HL3 according to EN 45545

Category 1 - Class B (Body mounted) according to IEC 61373

## MCBs

S800S series DC range with ring terminal connection, UC, B characteristic  
High performance MCBs

S801S

S802S

### S800S, UC, B characteristic

Function: protection and control of the circuits against overloads and short-circuits when a high breaking capacity is required; protection for people and big length cables in TN and IT systems; very useful when selectivity is needed vs an MCCB or back-up vs other MCBs wired downstream; version dedicated to application in direct current circuits.

**Standards: IEC/EN 60947-2**

**Hazard level R26/HL3 according to EN 45545**

**Category 1 - Class B (Body mounted) according to IEC 61373**

## MCBs

S800S series DC range with cage terminal, UC, K characteristic  
High performance MCBs

S801S

S802S

### S800, UC, K characteristic

Function: protection and control of the circuits like motors, transformer and auxiliary circuits, against overloads and short-circuits when a high breaking capacity is required; very useful when selectivity is needed vs an MCCB or back-up vs other MCBs wired downstream; version dedicated to application in direct current circuits.

Advantages: no nuisance tripping in the case of functional peak currents up to  $10 \times I_{N}$ , depending on the series; through its highly sensitive thermostatic bimetal trip, the K-type characteristic offers protection to damageable elements in the overcurrent range; it also provides the best protection to cables and lines.

## MCBs

S800N series with cage terminal, B characteristic  
High performance MCBs

### S800N-B characteristic

Function: protection and control of the circuits against overloads and short-circuits when a high breaking capacity is required; protection for people and big length cables in TN and IT systems; very useful when selectivity is needed vs an MCCB or back-up vs other MCBs wired downstream.

**Applications: commercial and industrial.**

**Standard: IEC/EN 60898, IEC/EN 60947-2**

**Icn=20 kA (10 ... 80 A)**

S800C series technical features

High performance MCBs

S800C		
<b>General Data</b>		
Tripping characteristics		B, C, D, K
Standards		IEC/EN 60947-2, EN 60898-1, UL 1077
Poles		1 ... 4
Rated current $I_e$	A	10 ... 125
Rated frequency $f$	Hz	50/60
Rated insulation voltage $U_i$ acc. to IEC/EN 60664-1	V	AC 500
Rated impulse withstand voltage $U_{imp}$ . (1.2/50μs)	kV	8
Overvoltage category		IV
Pollution degree		3
Suitability for isolation		yes
<b>Data acc. to IEC/EN 60898-1</b>		
Rated operational voltage $U_e$	V	AC 230/400
Min. operating voltage	V	AC 12
Rated short-circuit capacity $I_{cn}$	kA	15kA
Reference temperature for tripping characteristics	°C	30°C (Char. B, C, D)
Electrical and Mechanical Endurance	ops	10 ... 32 A: 10000 electrical/10000 mechanical 40 ... 100 A: 6000 electrical/10000 mechanical 125 A: 4000 electrical/8000 mechanical
Service short-circuit capacity $I_{cs}$	kA	Char. B, C, D: 230/400 V = 7.5 kA
<b>Data acc. to IEC/EN 60947-2</b>		
Rated operational voltage $U_e$	V	AC 240/415 DC 125 (1-pole) DC 250 (2-pole) DC 375 (3-pole) DC 500 (4-pole)
Min. operating voltage	V	AC 12
Rated ultimate short-circuit capacity $I_{cu}$	kA	AC 240/415 V = 25 kA AC 254/440 V = 15 kA DC 125 V (1-pole) = 10 kA DC 250 V (2-pole) = 10 kA DC 375 V (3-pole) = 10 kA DC 500 V (4-pole) = 10 kA
Rated service short-circuit capacity $I_{cs}$	kA	AC 240/415 V = 18 kA AC 254/440 V = 10 kA DC 125 V (1-pole) = 10 kA DC 250 V (2-pole) = 10 kA DC 375 V (3-pole) = 10 kA DC 500 V (4-pole) = 10 kA
Reference temperature for tripping characteristics	°C	B, C, D: 30 °C K: 40 °C
Electrical and Mechanical Endurance	ops.	6 ... 32 A: 10000 electrical/10000 mechanical 40 ... 100 A: 6000 electrical/10000 mechanical 125 A: 4000 electrical/8000 mechanical
<b>Mechanical Data</b>		
Housing		Material group I, RAL 7035
Toggle		black, lockable
Classification acc. To NF F 126-101, NFF 16-102		I3, F2
Protection degree acc. to EN 60529		IP20; IP40 (actuating end only)
Shock resistance acc. to IEC/EN 60068-2-30		IEC 61373 Cat. 1 Class B, 5g / 30ms acc. To IEC 60068-27 Test Ea
Vibration resistance acc. to IEC/EN 60068-2-6		IEC 60068-2-6 Test Fc; 2-13.2 Hz/1mm 13.2-100 Hz/0.7 g with load 100% x $I_e$
Environmental conditions (damp heat) acc. to IEC/EN 60068-2-30	°C/RH	12 + 12 cycle with 55 °C/90-96% and 25 °C/95-100 %
Environmental conditions (dry heat) acc. to IEC/EN 60068-2-2 Test B	°C/RH	16 hours 55 °C/2 hours 70 °C with damp heat 55%
Ambient temperature	°C	-25 ... +60
Storage temperature	°C	-40 ... +70

Screwdriver		POZI 2
Mounting		EN 60715
Mounting position		any
Supply		any
<b>Dimensions and weight</b>		
Pole dimensions (H x L x W)	mm	82.5 x 95 x 26.5
Pole weight	g	ca. 240

## MCBs

S800C series with cage terminal, B characteristic  
High performance MCBs

### S800C-B characteristic

Function: protection and control of the circuits against overloads and short-circuits when a high breaking capacity is required; protection for people and big length cables in TN and IT systems; very useful when selectivity is needed vs an MCCB or back-up vs other MCBs wired downstream.

**Applications: commercial and industrial.**

**Standard: IEC/EN 60947-2, IEC/EN 60898, UL 1077, supplementary protector**

## MCBs

S800C series with cage terminal, D characteristic  
High performance MCBs

### S800C-D characteristic

Function: protection and control of the circuits against overloads and short-circuits when a high breaking capacity is required; protection for people and big length cables in TN and IT systems; very useful when selectivity is needed vs an MCCB or back-up vs other MCBs wired downstream.

**Applications: commercial and industrial.**

**Standard: IEC/EN 60947-2, IEC/EN 60898, UL 1077, supplementary protector**

## Residual current devices

### Residual current devices

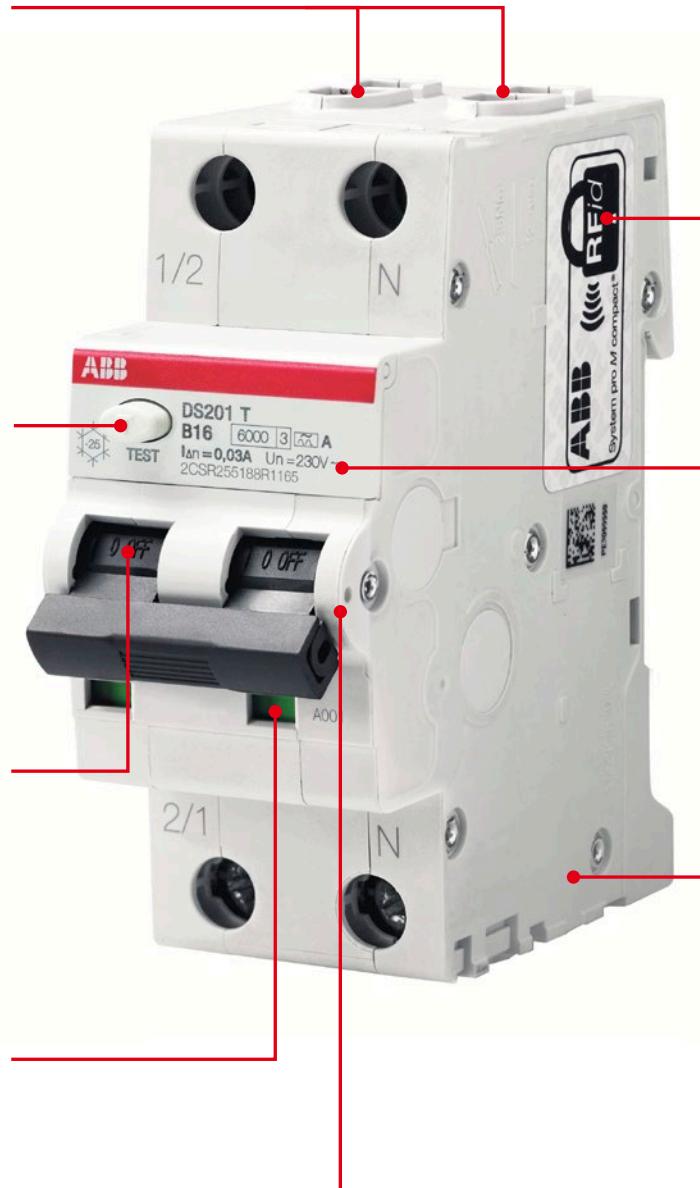

RCBO DS201 T (2019)	3/2
RCBO DS203NC	3/8

## RCBO DS201 T 1P+N. The details make the difference

A range designed for rolling stock equipments

### Easy to install

Bi-directional cylindrical terminal ensure higher safety of connecting operations, making them easier.

### Anti counterfeiting

DS201 is equipped with a tag RFid in order to authenticate the product.

### Laser printed information

Information on the device are laser printed to ensure readability over time.

### Earth fault indicator

Blue flag on the toggle to identify earth fault trips.  
1 ON – 0 OFF indication molded on the toggle.

### Combination with accessories

Improved combination with System pro M compact® accessories, including also the auxiliary contact for bottom fitting and motor operating device.

### Contact position indicator (CPI)

To indicate the status of the contacts independently from the toggle position:  
green (open), red (closed).

### Dedicated space for label

Dedicated space to insert labels in order to clearly identify the protected lines.

### Easy installation

The terminals available on DS201 make easier the supply operation in parallel with cables and busbars as they are composed by two different seats: a front seat for 25 mm<sup>2</sup> cables and a back seat for 10 mm<sup>2</sup> busbars. Supply is possible either from top or bottom side.

### Mounting clip

Stable fixing on DIN rail, easy and fast mounting and dismounting operations thanks to the standard mounting clip.

### Display the operational status

Easy troubleshooting and reduced downtime for maintenance operations thanks to both the blue indicator, that signals the differential tripping to immediately identify any earth fault (it cannot be activated in case of manual operation on the toggle) and the contact position indicator (CPI) that helps to always know the status of the contacts (red: closed contacts; green: open contacts).

### Reliable in extreme conditions

RCBO DS201 can be used in ambient conditions where the temperature of the surrounding atmosphere has values between -25 °C (snowflake laser printed on the front of the device) and +55°C.

### Additional laser printing

Additional information are laser printed on the lateral side of the device, including also the wiring diagram and the EAN code respectively for an easier installation and for an easier stock management.

### RFid

Product Made in Italy, with RFid tag on the product side containing a unique serial number assigned to ABB according to the standard ISO/IEC FCD 15693-3 in order to authenticate the product.

DS201 T series A  type, B, C and K characteristics

DS201 T

### DS201 T A type

Function: protection of end user single-phase circuits against overload and short-circuit currents; protection against the effects of sinusoidal alternating and direct pulsating earth fault currents; protection against indirect contact and additional protection against direct contact ( $I_{\Delta n}=30$  mA).

**Standards:** IEC/EN 61009

**Hazard level R26/HL3 according to EN 45545**

**Exigence 3 according to NF F 16-101/102 (I<sub>2</sub>-F<sub>3</sub>)**

**Category 1 - Class A/B (Body mounted) according to IEC 61373**

## Notes

## RCBO DS203NC. The effective choice

The benefits of a product with the highest quality standards

#### Use with cables and with busbars

Terminals with two slots allow to use different types of conductors: one housing is designed for cables up to 25 mm<sup>2</sup>, the other for busbars or cables up to 10 mm<sup>2</sup>.

#### RFid

Radio frequency tracking via a radio frequency tag to facilitate logistics and to be assured of the originality of the product.

#### Differential trip indicator

In case of tripping due to earth fault, a blue flag appears on the toggle thus immediately showing the cause of trip of the device. This feature helps in troubleshooting on the network and reduces the downtime for maintenance.

#### Laser print information

All the necessary technical and installation information are laser printed on the front and side of units ensuring visibility along the time, including order code on front of device for future orders.

#### Mounting clip

The mounting clip eases the installation and removal from the DIN rail, even when used in a battery of devices with busbars on bottom terminals (without need of removing other devices).

#### Approval stamps

DS203NC residual current circuit breakers with overcurrent protection can meet the different installation habits in the various countries and are approved by the most important certification bodies like IMQ, VDE, EAC, KEMA.

### DS203NC L - APR type - C curve

Function: protection of end user three-phase circuits against overload and short-circuit currents; protection against the effects of sinusoidal alternating and direct pulsating earth fault currents, providing an optimal compromise between safety and continuity of service, thanks to the resistance to unwanted tripping; protection against indirect contact and additional protection against direct contact ( $I_{\Delta n} = 30 \text{ mA}$ ); protection and isolation of resistive and inductive loads.

**Application:** commercial, industrial.

**Standard:** IEC/EN 61009-1; IEC/EN 61009-2-1

### DS203NC - A type - B curve

Function: protection of end user three-phase circuits against overload and short-circuit currents; protection against the effects of sinusoidal alternating and direct pulsating earth fault currents; protection against indirect contact and additional protection against direct contact ( $I_{\Delta n} = 30 \text{ mA}$ ).

**Application: commercial, industrial.**

**Standard: IEC/EN 61009-1; IEC/EN 61009-2-1**

S2C-S/H6R

**Signal/auxiliary contacts**

Signal contacts indicate if a device tripped due to a failure (overcurrent/short-circuit for MCBs and RCBOs; earth fault for RCCBs and RCBOs).

Auxiliary contacts indicate the position of the contacts, independent if a failure occurred or the device was operated manually.

**S2C-S/H6R:** choice through a selector between signal and auxiliary contact.

**S2C-H6R and S2C-HxxR:** Auxiliary contacts with contact configuration according the following table. All right-side mounted contacts are suitable for MCBs, RCDs, AFDD and switch disconnectors SD200 according the “Selection tables” which are displayed in the beginning of chapter 4.

S2C-H6...

**S2C-HxxL:** Auxiliary contacts with contact configuration according the following table. These contacts are left-side mounted and fit to S200 MCBs and switch disconnectors SD200 according the “Selection tables” which are displayed in the beginning of chapter 4. Especially when using a motor operating device this is a possibility to add a contact as the right side mounted ones do not fit within this combination.

**S2C-Hxx:** Unique bottom-fitting contact for the S200 compact range, DSE201 M and SD200 switch disconnectors. Simple and space-saving solution. Also intended for retrofitting.

## Accessories for S200C Compact MCBs

### G2C: Auxiliary and signal contact

#### Auxiliary (H):

Provides the status of the protection device, OPEN/CLOSED.

#### Auxiliary or signal (S/H):

This device can act as an auxiliary contact (function H) or as a signal contact (function S).

The user can change the function at the moment of installation.

Used as signal contact (function S) it provides the information about the automatic tripping of the protection devices: overload or short-circuit for MCBs, earth leakage tripping for RCDs.

- Test button on the front to simulate the function (acting as a function H or S)
- Reset button for the contacts (function S)
- Tripping signal on the front (function S)
- Version with golden contacts, available for low current as well as low voltage applications.

#### Mounting:

on the left or right, up to 4 G2C units (On S203C accepted only on the left)

## Busbars and accessories for MCBs S 200 series

### PS busbars

#### Short description

ABB busbar systems enable the safe and economic cross connection of MCBs, RCCBs and RCBOs.

For a correct busbar selection the following points need to be considered:

- MCB terminal type (Twin terminal or cage terminal)
- Number of poles (1, 2, 3, 4, 1+N or 3+N)
- Device type (MCB, RCCB or RCBO)
- Combinations (e.g. RCCB + MCB or RCCB 3+N + RCCB 1+N)
- Use of side mounted auxiliary elements on MCB \*)
- Busbar diameter (for current carrying capacity calculation)
- Number of modules (choice of standard busbar or busbar for cutting)

#### Coding of PS busbars

Instruction of installation	When cutting the busbar, ensure that the insulation profile exceeds the copper bar by approx. 10 mm on each side. Shock protection only with mounted end caps ensured. For DC applications the required increased clearance and creepage distances needs to be ensured.						

1) In case of feed in from the middle of the busbar it needs to be ensured, that the sum of junction currents per side must not exceed the max busbar current  $I_s$ /phase.  
Irrespective of the current carrying capacity ( $I_s$ ) of the busbar, the max. rated current of the devices terminal may not be exceeded.--

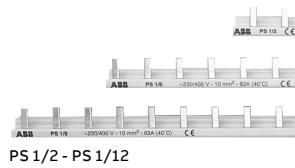

Feed in from the end of the busbar

Feed in from the middle of the busbar

1) The indicated electromagnetic tripping values apply to a frequency range of 16 2/3 ... 60 Hz. For different network frequencies or direct current the values change according to the multiplier in the table below

2) The thermal releases are calibrated to a nominal reference ambient temperature; for Z and K, the value is 20 °C, for B and C = 30 °C. In the case of higher ambient temperatures, the current values fall by ca. 6 % for each 10 K temperature rise.

3) As from operating temperature (after I<sub>1</sub> > 1 h or, as applicable, 2 h).

### Derating tables at different temperatures for S 200 MT/S 200 P and MCBs

The rated value of the current of a miniature circuit-breaker refers to a temperature of 20 °C for circuit-breakers with characteristics K and Z and 30 °C for characteristics B, C and D. The following tables contain the derating of load capability of S200 MT/S200 P MCBs with temperature from -40 °C to 70 °C for the curves B, C, D and K, Z.

## MCBs technical details

### Derating

#### Derating table at different temperatures for S 800 S MCBs:

The rated value of the current of the S 800 S refers to a calibration temperature of 30 °C for characteristics B, C while, for characteristics K and UCK, it refers to 40 °C.
