

BUSINESS AREA: ELECTRIFICATION

# ABB Smart Buildings

## Facts & Figures

ABB's Smart Buildings division is a world-leading provider of energy distribution and building automation, making buildings safer, smarter, and more sustainable. Whether in new or existing single-family homes, multi-dwellings, commercial, and industrial buildings, our innovative solutions include DIN-rail components, enclosures, smart meters, wiring accessories, home & commercial building automation, energy management.

ABB's Smart Buildings division is present in over 100 countries, with around 35 manufacturing sites delivering more than 1.5 million products a day.

### Revenues

\$2,750–3,250 million

### Market position

No. 3 overall  
No. 1–2 in Distribution Enclosures and DIN-Rail Products

### Key market drivers and trends

The built environment is undergoing significant transformation driven by:

- Global demand for decarbonization and increasing electrification
- Growing urbanization, especially in fast-developing regions
- The global energy shortage and rising energy costs
- Increasing customer and end-user requirements for integrated, easy-to-use solutions

The advancement of affordable technology and increasing regulation will accelerate the development of smarter and more sustainable buildings around the world.
