

BUSINESS AREA: ELECTRIFICATION

ABB Smart Power

Facts & Figures

ABB's Smart Power division provides energy distribution solutions for data centers, industrial and manufacturing plants, critical infrastructure and commercial buildings. The division's technical teams work closely with industry partners, delivering advanced solutions that support rapid growth, energy transition, and sustainability objectives. Smart Power's portfolio includes industrial circuit breakers, low-voltage systems, motor starting applications, and safety devices like switches and relays. Its Power Protection unit supports the world's largest data center companies with advanced energy-efficient UPS solutions. The Division's ABB Ability™ Energy Manager provides a scalable, easy-to-use platform that enables organisations to drive energy savings and CO₂ reductions.

Revenues

\$4,750–5,250 million

Market position

No. 3 overall
No. 2 in low voltage solutions

Key market drivers and trends

- Innovative products, solutions and service for **Critical Power**
- Comprehensive portfolio for **Smart Industries**
- Best in class **end-to-end operations**
- Shifting from **products to solutions** and services. **OPEX rather than CAPEX**
- **Digital energy management**, electrification, energy transition
- **Sustainable** products and solutions
