

## MINIATURE CIRCUIT BREAKERS

**S 200 80A – 100A**

## System pro M compact® miniature circuit breakers

The miniature circuit breakers of the System pro M compact® series S 200 provide state-of-the-art safety and comfort. They stand out due to their high performance and the wide range of accessories and approvals.

The additional electrical currents 80 A and 100 A complement the current portfolio of the System pro M compact® and offer maximum performance in a single module width.

**Features**

- Clear contact position indication in red/green (“real CPI”)
- Unique, patented twin terminal with captive screws and an increased opening for cables up to max. 50 mm<sup>2</sup>, finger-proof (IP20)
- Busbar slot in the back for best visibility during installation
- High performance in building installations and industrial applications up to 6 kA at Ue = 400 V AC acc. to IEC/EN 60947-2 and IEC/EN 60898-1
- Individual product identification code
- Approved acc. to IEC/EN 60898-1 and IEC/EN 60947-2 for global use

**Country approvals**

### Tripping characteristics

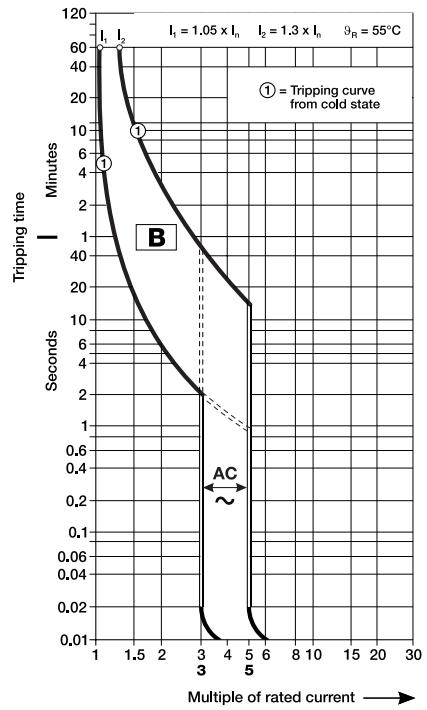

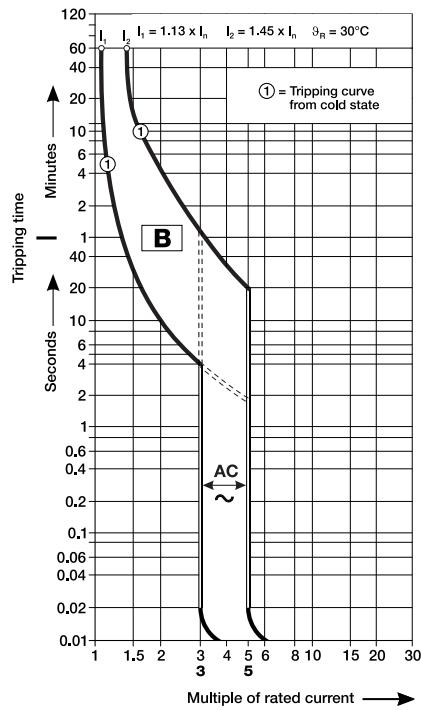

- 1) The thermal releases are calibrated to a nominal reference ambient temperature; for B and C the reference value is 30 °C. In the case of higher ambient temperatures, the current values fall by approx. 6 % for each 10 K temperature rise.
- 2) The indicated tripping values of electromagnetic tripping devices apply to a frequency of 50/60 Hz. The thermal release operates independent of frequency.

### Derating, internal resistance and power loss

#### Derating

##### Deviating ambient temperature

For installations of miniature circuit breakers at other temperatures than the reference value derating factors have to be considered. The rated value of the current of a miniature circuit breaker refers to a reference ambient temperature of 30°C for circuit breakers with the characteristics B and C.

The following table contains the derating of the load capability at ambient temperatures from -40°C to 70°C for the characteristics B and C:

Characteristic	Rated current $I_n$	Maximum operating current at ambient temperature T												
		A	A	- 40 °C	- 30 °C	- 20 °C	10 °C	0	+ 10 °C	+ 20 °C	+ 30 °C	+ 40 °C	+ 50 °C	+ 60 °C
B, C	80	96.8	94.4	92.0	89.6	87.2	84.8	82.4	80.0	77.6	75.2	72.8	70.4	
	100	121.0	118.0	115.0	112.0	109.0	106.0	103.0	100.0	97.0	94.0	91.0	88.0	

#### Influence of adjacent devices

If several miniature circuit breakers are installed directly side by side with high load on all poles, a correction factor has to be applied to the rated current (see table). If distance pieces are used, the factor is not to be considered.

No. of adjacent devices	Factor F
1	1
2, 3	0.9
4, 5	0.8
≥ 6	0.75

#### Example

Installation of 8 adjacent miniature circuit breakers S201-C80 at 50°C ambient temperature

Rated current  $I_n = 80\text{A}$

Max. operating current at 50°C = 75.2A  
(see table above)

Factor F = 0.75 (see left table)

$$\text{In} = 75.2\text{A} \times 0.75 = 56.4\text{A}$$

Result: The operating current can only add up to max. 56.4A

#### Internal resistance and power loss per pole

Tripping characteristic	Rated current $I_n$	Internal resistance $R_i$	Power loss $P_v$
	A	mOhm	W
B, C	80	0.9	8.1
B, C	100	0.8	9.8

Internal resistances are subject to application-specific and environment-specific conditions and are therefore to be considered as typical values.
