1.   <u>Change:</u>

                                  Change of some texts.

2.   <u>Status Valve position:</u>

                                  If the status valve position = 1 bit, than work the parameter "object value" at
                                  valve position > 0 inverts.

                                  This was repaired.

3.   <u>Incorrect Time Interval:</u>

                                  The time intervals concerned begin in each case with n x 145,6355555s and
                                  are 2,27s long. The adjusted time within this range is max. 2,27s long.

                                  This was repaired

4.   <u>Status objects „Valve Heating":</u>

                                  HVAC-System: 2 Controls values/4 pipe
                                  Status Valve Heating   1 Bit

                                  Control value Heating = 0 -->   Control value Cooling = 0 -->
                                  Control value Cooling > 0 -->   Control value Cooling = 0

                                  The Status objects Valve Heating change the status, if the control value
                                  Cooling "0".

                                  This was repaired.
