2.58	Adding the Request: Water Energy Billing Date 1	51
2.59	Adding the Request: Water Energy Billing Date 2	51
2.60	Adding the Request: Water Mass Billing Date 1	52
2.61	Adding the Request: Water Mass Billing Date 2	52
2.62	Adding the Request: Pressure Difference	53
2.63	Adding the Request: Steam Pressure	53
2.64	Adding the Request: Condensate Volume Flow Rate.....	54
2.65	Adding the Request: Condensate Mass Flow	54
2.66	Adding the Request: Specific Density of Condensate	55
2.67	Adding the Request: Water Power	55
2.68	Adding the Request: Power Balance	56
2.69	Adding the Request: Standard Specific Density of Condensate.....	56
2.70	Adding the Request: Pressure Difference of Split Range	57
2.71	Writing the Current Energy (SensyCal T: Mass 1).....	57
2.72	Writing Current Volume	58
2.73	Writing Mass 2 (SensyCal T).....	59
2.74	Writing Counter 3	59
2.75	Writing the Current Energy of the Water	60
2.76	Writing the water mass.....	61
2.77	Writing the Current Time and Date	61

2.78	Setting the Output List (Directly)	62
2.79	Adding the Request: L Correction Factor.....	64
2.80	Adding the Request: C Correction Factor	64
2.81	Adding the Request: Z Correction Factor.....	64
2.82	Adding the Request: Free Text	65
2.83	Adding the Request: Serial Number.....	65
2.84	Writing the ID Number.....	66
2.85	Saving the MBus Output List Permanently (in EEPROM)	66
3	Special MVV Version.....	67
3.1	Reading Out of Data Logger	67
4	FCB Bit Management of SENSYCAL.....	71

1 SENSYCAL Response Telegrams

The telegram structures that SENSYCAL can return are listed and explained in the following.

1.1 Response of Terminal without Data (after the Delete Output List Command)

This telegram is always sent when no output data has been selected in SENSYCAL. This is always the case if the internal output list has been deleted.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	08	
5	A field	0-255	
6	CI field	72h	
7	ID3	78h	ID (LSB first) BCD 12345678
8	ID2	56h	
9	ID1	34h	
10	ID0	12h	
11	Man1		Manufacturer (LSB first)
12	Man0		
13	Version		
14	Medium		
15	Access no.	0-255	Automatically increased
16	Status	0	
17	Signature 1	0	
18	Signature 0	0	
19	Checksum (CS)		Calculated from (Σ fields 4 to 18) mod 256
20	Terminator	16h	

1.2 Standard Response from SENSYCAL

This telegram is always issued after a REQ_UD2 preceded by an application reset. It is issued until further values are added to the output list or the SENSYCAL output list is deleted.

Note:

A SND_NKE sent to the device does **not** set this response.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	Xx	
2	Length field	Xx	
3	Start character	68h	
4	C field	08	
5	A field	0-255	
6	CI field	72h	
7	ID3	78h	ID (LSB first) BCD 12345678
8	ID2	56h	
9	ID1	34h	
10	ID0	12h	
11	Man1		Manufacturer (LSB first)
12	Man0		
13	Version		
14	Medium		
15	Access no.	0-255	Automatically increased
16	Status	0	
17	Signature 1	0	
18	Signature 0	0	
19-ES	Standard response from the device		To be described in more detail
ES+1	Checksum (CS)		Calculated from (Σ fields 4 to ES) mod 256
ES+2	Terminator	16h	

ES = end of standard response

1.3 Response from SENSYCAL with n Selected Parameters

This telegram enables the SENSYCAL data to be transferred in any combination. The sequence of the data is determined by the order in the drop-down list.

If the queried data cannot be transferred in a telegram, a multi-telegram sequence is automatically generated and the missing data is transferred in the following telegram.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	08	
5	A field	0-255	
6	CI field	72h	
7	ID3	78h	ID (LSB first) BCD 12345678
8	ID2	56h	
9	ID1	34h	
10	ID0	12h	
11	Man1		Manufacturer (LSB first)
12	Man0		
13	Version		
14	Medium		
15	Access no.	0-255	Automatically increased
16	Status	0	
17	Signature 1	0	
18	Signature 0	0	
19	Selected parameter 1		
19+x1	Selected parameter 2		
19+x1 +x2	Selected parameters ...		
19+x1 +x2+.. .xn-1	Selected parameter n		
19+x1 +x2+.. .xn+ 1	Checksum (CS)		Calculated from (\sum fields 4 to CS-1) mod 256
	Terminator	16h	

1.4 Response from SENSYCAL when Downloading the EEPROM with Additional Data in the Following Telegram

Data is transferred from the EEPROM using a multi-telegram sequence. This allows a variable volume of data to be transferred.

The following telegram is always used if more than one telegram is required and the current telegram is not the last telegram of the series.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	08	
5	A field	0-255	
6	CI field	72h	
7	ID3	78h	ID (LSB first) BCD 12345678
8	ID2	56h	
9	ID1	34h	
10	ID0	12h	
11	Man1		Manufacturer (LSB first)
12	Man0		
13	Version		
14	Medium		
15	Access no.	0-255	Automatically increased
16	Status	0	
17	Signature 1	0	
18	Signature 0	0	
19	Manufacturer-specific data will follow.	1fh	1fh further data will follow.
20	Start of manufacturer-specific data		
243	End of manufacturer-specific data		
244	Checksum (CS)		Calculated from (Σ fields 4 to 243) mod 256
245	Terminator	16h	

1.5 Response from SENSYCAL when Downloading the EEPROM without Further Data

This telegram is used if the current telegram is the last telegram in a multi-telegram sequence or the requested data from the EEPROM can be sent in a telegram.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	Xx	
2	Length field	Xx	
3	Start character	68h	
4	C field	08h	
5	A field	0-255	
6	CI field	72h	
7	ID3	78h	ID (LSB first) BCD 12345678
8	ID2	56h	
9	ID1	34h	
10	ID0	12h	
11	Man1		Manufacturer (LSB first)
12	Man0		
13	Version		
14	Medium		
15	Access no.	0-255	Automatically increased
16	Status	0	
17	Signature 1	0	
18	Signature 0	0	
19	Manufacturer-specific data will follow.	0fh	0f Signals the end of the data.
20	Start of manufacturer-specific data		
EHS	End of manufacturer-specific data		
EHS+ 1	Checksum (CS)		Calculated from (Σ fields 4 to EHS) mod 256
EHS+ 2	Terminator	16h	

EHS = end of manufacturer-specific data

1.6 Response from SENSYCAL after Requesting the Power Down List

SENSYCAL transfers the power down list in the following format. A multi-telegram sequence is used.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	Xx	
2	Length field	Xx	
3	Start character	68h	
4	C field	08h	
5	A field	0-255	
6	CI field	72h	
7	ID3	78h	ID (LSB first) BCD 12345678
8	ID2	56h	
9	ID1	34h	
10	ID0	12h	
11	Man1		Manufacturer (LSB first)
12	Man0		
13	Version		
14	Medium		
15	Access no.	0-255	Automatically increased
16	Status	0	
17	Signature 1	0	
18	Signature 0	0	
19	DIF	04h	
20	VIF	6dh	Time point
21-24	Time point (data type F)		Time point of power off. (Data type F)
25	DIF	02	
26	VIF	7fh	Manufacturer-specific DIF-VIF combination
27	Power down no.		
28	DIF	04h	
29	VIF	6dh	Time point
30-33	Time point (data type F)		Time point of power on. (Data type F)
34 to (CS-1)	Further errors: format as before		
CS-1	0fh = all errors transferred 1Fh = additional errors in the next telegram	1fh (0fh)	
CS	Checksum (CS)		
CS+1	Terminator	16h	

1.7 Response from SENSYCAL after Requesting the Error List

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	08h	
5	A field	0-255	
6	CI field	72h	
7	ID3	78h	ID (LSB first) BCD 12345678
8	ID2	56h	
9	ID1	34h	
10	ID0	12h	
11	Man1		Manufacturer (LSB first)
12	Man0		
13	Version		
14	Medium		
15	Access no.	0-255	Automatically increased
16	Status	0	
17	Signature 1	0	
18	Signature 0	0	
19	DIF	04h	
20	VIF	6dh	Time point
21-24	Time point (data type F)		Time at which the error was set. (Data type F)
25	DIF	01	
26	VIF	7fh	Manufacturer-specific DIF-VIF combination
27	Error number (identical to errBuf[y].errTextNo.)		
28	DIF	04h	
29	VIF	6dh	Time point
30-33	Time point (data type F)		Time at which the error was reset. (Data type F)
34 to (CS-1)	Further errors: format as before		
CS-1	0fh = all errors transferred 1Fh = additional errors in the next telegram	1fh (0fh)	
CS	Checksum (CS)		
CS+1	Terminator	16h	

1.8 Response Telegram after Requesting the Error Texts.

The strings with the error texts will be sent in the language selected in SENSYCAL.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	08h	
5	A field	0-255	
6	CI field	72h	
7	ID3	78h	ID (LSB first) BCD 12345678
8	ID2	56h	
9	ID1	34h	
10	ID0	12h	
11	Man1		Manufacturer (LSB first)
12	Man0		
13	Version		
14	Medium		
15	Access no.	0-255	Automatically increased
16	Status	0	
17	Signature 1	0	
18	Signature 0	0	

Response telegram (VIFE of request telegram = 1)

19	DIF	02h	
20	VIF	fdh	
21	VIFE	17h	
22			Main error
23			Main error

25			Number of error texts
			String with error texts 1 - 10
CS	Checksum (CS)		
CS+1	Terminator	16h	

Response telegram (VIFE of request telegram = 2)

19		0fh	MDH
20			Number of error texts
			String with error texts 10...
CS	Checksum (CS)		
CS+1	Terminator	16h	

1.9 Response from SENSYCAL after Requesting the Values from the Data Logger

SENSYCAL responds with a multi-telegram sequence. No more than one log period is transferred per telegram. The last transmitted block is always concluded with a 0fh.

Each telegram also contains the period length and the integration time. The period number is also transferred in the memory number of the DIF/DIFE combination. The units are formed according to the SENSYCAL configuration. Max. values are marked by the function field in the DIF. Init values are marked by an additional VIFE.

The structure of the data logger is variable; the response telegram therefore also varies accordingly. The structure of the data logger can be requested by reading out the data field (device-specific data).

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	08h	
5	A field	0-255	
6	CI field	72h	
7	ID3	78h	ID (LSB first) BCD 12345678
8	ID2	56h	
9	ID1	34h	
10	ID0	12h	
11	Man1		Manufacturer (LSB first)
12	Man0		
13	Version		
14	Medium		
15	Access no.	0-255	Automatically increased
16	Status	0	
17	Signature 1	0	
18	Signature 0	0	
	Data logger: log period		The units of the following data are dependent on the SENSYCAL configuration and therefore cannot be described in more detail.
	Data logger: integration period		
	Data logger: period n time		
	Data logger: period n counter		Main counter 0 - 6
	Data logger: period n floats		Float values 0 - 50
	Data logger: period n mean values		Mean values 0 - 8
	Data logger: period n max. time		Maximum values 0 - 8
	Data logger: period n maximum value		
	Data logger: period n min. time		Minimum values (number as per max. values)
	Data logger: period n minimum value		
CS-1	0Fh = all data transferred 1Fh = additional data in the next telegram	1fh (0fh)	
CS	Checksum (CS)		
CS+1	Terminator	16h	

1.10 Response Telegram after Requesting a Data Field.

The returned buffer has the following format:

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	08h	
5	A field	0-255	
6	CI field	72h	
7	ID3		ID (LSB first) example: BCD 12345678 78h
8	ID2		56h
9	ID1		34h
10	ID0		12h
11	Man1		Manufacturer (LSB first)
12	Man0		
13	Version		
14	Medium

CS	Checksum (CS)		
CS+1	Terminator	16h	

1.10.5 Reading Out Device Type and Current Date and Time (Control Byte 00h (Default))

25	DIF	0fh	MDH
26			Device type 1st letter
27			Device type 2nd letter
28			Device type 3rd letter
29			Special type (0 = normal, M = MVV)
CS	Checksum (CS)		
CS+1	Terminator	16h	

Note: Only single telegrams intended. MDH can follow immediately after the time point

2 Telegrams to SENSYCAL

All telegrams that can be sent from the master to the SENSYCAL are listed below.

2.1 Application Reset (Communications Reset)

If SENSYCAL receives such a telegram, it performs a reset of the communications application layer. After the application reset, SENSYCAL responds to every request from the next request onwards with its standard response (see above).

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	50h	
CS	Checksum		Application reset
CS+1	Terminator	16h	

2.2 Setting the Transmission Rate

The telegram changes the transmission rate for communication.

The telegram is still acknowledged with the old transmission rate.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	b8h-bfh	Baud rate 300-38400 bd (see table)
CS	Checksum		
CS+1	Terminator	16h	

CI field	Transmission rate
b8h	300 bd
b9h	600 bd
Bah	1200 bd
Bbh	2400 bd
Bch	4800 bd
Bdh	9600 bd
Beh	19,400 bd
Bfh	38,400 bd

2.3 Deleting the Output List.

This telegram deletes the SENSYCAL output list.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	7fh	
8	VIF	feh	
9	VIFE1	0dh	
CS	Checksum		
CS+1	Terminator	16h	

2.4 Restoring the Output List.

This telegram restores the output list after it has been deleted once

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	7fh	
8	VIF	feh	
9	VIFE1	Ffh	
10	VIFE2	0ch	
CS	Checksum		
CS+1	Terminator	16h	

2.5 Request: Global Readout Request

This request deletes the existing output list and then adds all the values from SENSYCAL.

Not included in the output:

- The EEPROM contents
- The fault lists
- The data logger values.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	7fh	
8	VIF	7eh	
CS	Checksum		
CS+1	Terminator	16h	

2.6 Requesting the EEPROM Data

The following telegram requests the specified EEPROM pages. The first DIF/VIF combination specifies the start page, the second combination the end page. If the end page is omitted, the last EEPROM page automatically becomes the end page.

The transfer of the data from the SENSYCAL EEPROM starts with the next REQ_UD2 and ends when the specified end page is reached, which will generally result in a multi-telegram sequence. Once the requested EEPROM data has been transmitted, SENSYCAL responds with its previously set response.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	0bh	
2	Length field	0bh	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	1(S0)00 1000	Request of EEPROM data
8	DIFE1	1000 (S4) (S3) (S2) (S1)	Starting with page S
9	DIFE2	0000 (S8) (S7) (S6) (S5)	
10	VIF	7fh/ffh	7fh: no VIFEffh: extend. Para
	VIFE	7fh	
	DIF(optional)	1(S0)00 1000	Ended with page S
	DIFE1 (optional)	1000 (S4) (S3) (S2) (S1)	Set at the end of the EEPROM by default.
	DIFE2 (optional)	0000 (S8) (S7) (S6) (S5)	
	VIF (optional)	7fh	
	Checksum		
	Terminator	16h	

S is a nine-digit binary number S8(MSB), S7... S0(LSB)

Example:

\$68 \$0b \$0b \$68 \$73 \$64 \$51 \$88 \$80 \$00 \$7f \$C8 \$8F \$01 \$7f Cs 16

Reads the EEPROM contents from page 0 to page 63 inclusive

2.7 Writing to the EEPROM Data

The following telegram is provided for writing data to the SENSYCAL EEPROM.

The data will be written from the start page coded in the first DIF/VIF combination. The data will only be written to the EEPROM if sufficient data is available.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	1(S0)00 0000	EEPROM data
8	DIFE1	1000 (S4) (S3) (S2) (S1)	Starting with page S
9	DIFE2	0000 (S8) (S7) (S6) (S5)	
10	VIF	7fh/ffh	7fh: no VIFE ffh: extend. Para
	VIFE	7fh	
	DIF	1(S0)00 0000	Ended with page S
	DIFE1	1000 (S4) (S3) (S2) (S1)	
	DIFE2	0000 (S8) (S7) (S6) (S5)	
	VIF	7fh	
	DIF	0fh	MDH
	Data for the EEPROM		
CS	Checksum		
CS+1	Terminator	16h	

S is a nine-digit binary number S8(MSB), S7... S0(LSB)

Note:

After writing the EEPROM data, a time of 500 ms should be allowed to elapse before the written data can be accessed again.

If communication parameters have been changed as a result of writing the EEPROM data, this must be taken into account accordingly.

2.8 Changing the M Bus Address

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	1	
8	VIF	7a	
9			New MBus address
CS	Checksum		
CS+1	Terminator	16h	

2.9 Adding the Request: Device Type

This telegram extends the output list. The device type is delivered in the form of an ASCII character (W, S, T, etc.).

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	1	
8	VIF	Fdh	
9	VIFE1	8c	
10	VIFE2	0ch	
CS	Checksum		
CS+1	Terminator	16h	

2.10 Adding the Request: Possible Baud Rates

This telegram extends the output list. An MBus record containing information about the available transmission rates is now also output.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	1	
8	VIF	Fdh	
9	VIFE1	9c	
10	VIFE2	0ch	
CS	Checksum		
CS+1	Terminator	16h	

The RSP_DU returns a binary byte coded as follows:

Bit	MSB(7)	6	5	4	3	2	1	LSB(0)
Baud rate	38,400 bd	19,200 bd	9600 bd	4800 bd	2400 bd	1200 bd	600 bd	300 bd

A set bit means that this transmission rate is available.

2.11 Adding the Request: Current Energy in GJ (SensyCal T: mass 1)

This telegram extends the output list. An MBus record containing the current energy is now also output.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	5	
8	VIF	Fbh	See also table
9	VIFE1	89H	
10	VIFE2	0ch	of energy units
CS	Checksum		
CS+1	Terminator	16h	

The current energy can also be requested in other units (see table of energy units).

Energy units

Unit	VIF	VIFE1	VIFE2
GJ	fbh	89H	0ch
MJ	8eh	0ch	
kJ	8bh	0ch	
GJ	88h	0ch	
MWh	fbh	81h	0ch
kWh	86h	0ch	
Wh	83h	0ch	
BTU	ffh	81h	0ch
kBTU	ffh	81h	0ch
MBTU	ffh	81h	0ch

Mass 1 units (SensyCal T)

Unit	VIF	VIFE1	VIFE2
kg	9bh	0ch	
t	9eh	0ch	
klb	ffh	82h	0ch
lb	ffh	86h	0ch

However, the device always responds with the unit set in the device.

2.12 Adding the Request: Billing Date 1: Energy

This telegram extends the output list. An MBus record containing the energy on billing date 1 is now also output.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h

CS+1	Terminator	16h	

Mass 2 units

Unit	VIF	VIFE1	VIFE2
kg	9bh	0ch	
t	9eh	0ch	
klb	ffh	82h	0ch
lb	ffh	86h	0ch

However, the device always responds with the unit set in the device.

2.16 Adding the Request: Billing Date 1: Volume

This telegram extends the output list. An MBus record containing the volume on billing date 1 is now also output.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	45h	
8	VIF		See table
9	VIFE1		
10	VIFE2		of volume units (2.14)
CS	Checksum		
CS+1	Terminator	16h	

2.17 Adding the Request: Billing Date 1: Mass 2 (SensyCal T)

This telegram extends the output list. An MBus record containing the volume on billing date 1 is now also output.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	c5h	
8	DIFE	40h	
9	VIF		See table
10	VIFE1		
11	VIFE2		of mass 2 units (2.15)
CS	Checksum		
CS+1	Terminator	16h	

2.18 Adding the Request: Billing Date 2 Volume

This telegram extends the output list. An MBus record containing the volume on billing date 2 is now also output.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	85h	
8	DIFE1	01h	
9	VIF		See table
10	VIFE1		
11	VIFE2		of volume units (2.14)
CS	Checksum		
CS+1	Terminator	16h	

2.19 Adding the Request: Billing Date 2 Mass 2 (SensyCal T)

This telegram extends the output list. An MBus record containing the volume on billing date 2 is now also output.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	85h	
8	DIFE1	41h	
9	VIF		See table
10	VIFE1		
11	VIFE2		of mass 2 units (2.15)
CS	Checksum		
CS+1	Terminator	16h	

2.20 Adding the Request: Counter 3 Value

This telegram extends the output list. An MBus record containing the current value of counter 3 is now also output.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	5	
8	VIF	7fh	
CS	Checksum		
CS+1	Terminator	16h	

When counter 3 is queried, the value of main counter 3 is returned. The unit is returned in accordance with the SENSYCAL settings. Counter readings that define a tariff or a value during an error condition are indicated by the corresponding flags in the DIF block. The unit is then identical to that of the corresponding main counter.

2.21 Adding the Request: Counter 3 Billing Date 1

This telegram extends the output list. An MBus record containing the value of counter 3 on billing date 1 is now also output.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	xx	
2	Length field	xx	
3	Start character	68h	
4	C field	53h or 73h

10	VIFE1	0ch	
CS	Checksum		
CS+1	Terminator	16h	

2.49 Reading Out of Data Logger

The following telegram requests the values from the data logger. The transfer starts with the next REQ_UD2. Once the transfer is complete, SENSYCAL responds again with the telegram set by the output list. The structure of the data logger can be requested when reading out a data field.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	0bh	
2	Length field	0bh	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	1 (S0)00 1000h	First block
8	DIFE1	1100 (S4)(S3)(S2)(S1)h	
9	DIFE2	0100 (S8)(S7)(S6)(S5)h	
10	VIF	Fdh	(== first storage)
11	VIFE1	20h	
12	DIF	1 (S0)00 1000h	Last block (inclusive)
13	DIFE1	1100 (S4)(S3)(S2)(S1)h	
14	DIFE2	a100 (S8)(S7)(S6)(S5)h	a = 0: no DIFE3 a = 1: DIFE3
	DIFE3	01/02/04	01: read out indiv. 02: reset readout
			04: read out directly
	VIF	Fdh	(== last storage)
	VIFE1	21h	
CS	Checksum		
CS+1	Terminator	16h	

S is an eight-digit binary number formed from S0(LSB) to S8(MSB) value range [0...511]

First block: 511 = read out everything (contents of last block not relevant)

Last block: 511 = read out current log period (contents of first block not relevant)

Number of bytes per log/readDirect(x): 64/100 128/50 192/32 256/24 readDirect = number x to current log period.

If the log period is outside of readDirect, an interval of approx. 500 ms between the readout telegram and the next REQ_UD2 is required.

2.50 Reading Out the Error List

The following telegram requests the error list from SENSYCAL. The transfer starts with the next REQ_UD2. Once the transfer is complete, SENSYCAL responds again with the telegram set by the output list.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	0bh	
2	Length field	0bh	
3	Start character	68h	
4	C field	53h or 73h	
5	A field	0-255	
6	CI field	51h	
7	DIF	88h	
8	DIFE	01h	
9	VIF	7fh	
CS	Checksum		
CS+1	Terminator	16h	

The error list is output with the next REQ_UD2. If the error list does not fit in a telegram, a multi-telegram sequence is automatically started. The error list is concluded with a 0fh in each case.

2.51 Reading Out the Error Texts

The following telegram requests the error texts from SENSYCAL. The transfer starts with the next REQ_UD2. The texts will be output in the language selected in SENSYCAL. Once the transfer is complete, SENSYCAL responds again with the telegram set by the output list.

No.	Description	Value	Comments
0	Start character	68h	
1	Length field	0bh	
2	Length field	0bh	
3	Start character	68h

S is an eight-digit binary number formed from S0(LSB) to S7(MSB) value range [0...255]

- S: 1 Mean power values for January
- 2 Mean power values for February
- 3 Mean power values for March
-
- 12 Mean power values for December
- 13 Mean power values for current month

- 16 Mean power values data set (2 previous months and current month)
- 32 Load analysis
- 64 Power-free time, deactivation time

Return S = 1...13 (1...0DH):

Mean power values for one month

4 FCB Bit Management of SENSYCAL

SENSYCAL uses FCB bit handling of the MBus protocol.

It manages an FCB bit for REQ_UD2 and SND_DU for each address (primary address, 253.254). The FCB bits are reset with an SND_NKE. In addition, the FCB bit of address 253 is reset when the secondary address is selected.

If SENSYCAL receives a telegram with an FCB bit no different to that of the previous telegram, the previously transmitted telegram is sent again. The data in the telegram remains unchanged; any changed counter readings are not taken into account.
