
ABB MEASUREMENT & ANALYTICS | DATA SHEET

FSM4000

Electromagnetic flowmeter

Measurement made easy

The ultimate solution for the most demanding applications

Outstanding performance

- The FSM4000 takes on the task where all other flowmeters fail.

FSM4000 for optimal operational security in all demanding applications

- Sludges with high level of solids
- High level of pulp
- Concentrated sludge

Durability for a maximum service life

- Long-lasting liner materials are resistant to abrasion and corrosion
- No additional wear caused by protruding parts in the meter tube

General properties

- Nominal diameter DN 3 to 1000 ($\frac{1}{10}$ to 40 ")
- Pressure rating PN 10 to PN 40; ASME CL150, CL300
- Process connection: flange in accordance with DIN/EN, ASME
- Liner materials: PFA, PTFE, hard rubber, soft rubber and ceramic carbide
- Digital communication via HART®, PROFIBUS PA® or FOUNDATION Fieldbus® protocol

Overview – models

Approvals

Model number	SE41F	SE21F	SE21W	SE21_*
Hygienic and sterile requirements	—	CIP/SIP capable	3A, CIP/SIP capable	
Pressure Equipment Directive 97/23/EC	Conformity assessment in accordance with category III, fluid group 1			
CRN (Canadian Reg. Number)	On request			

Transmitter

Model number	S4	
Power supply	85 to 253 V AC, 24 V AC/DC	
Current output	0/2 to 10 mA, 0/4 to 20 mA	
Pulse output	active (24 V), optocoupler (220 mA)	
Ext. output switch-off	yes	
Ext. totalizer reset	yes	
Forward / reverse flow measurement	yes	
Communication	HART® protocol, PROFIBUS PA®, FOUNDATION Fieldbus®	
Pipe empty detection std.	yes, DN 10 or higher and $\geq 20 \mu\text{S}/\text{cm}$	
Self-monitoring, extended diagnosis functions	yes, extended diagnostic functions / fingerprint only in connection with sensors SE21, SE21F and SE41F for DN 10 or higher	
Local display / totalization	yes	
Density correction	yes, manual entry (totalize and display in mass units)	
IP rating in accordance with EN 60529	IP 65 / IP 67, NEMA 4X	
Chassis	Field mount housing	

General data

Measuring accuracy

Reference conditions in accordance with EN 29104

Measuring medium temperature	20 °C (68 °F) ±2 K
Ambient temperature	20 °C (68 °F) ±2 K
Power supply	Nominal voltage as per name plate UN ± 1 %
Installation conditions	<ul style="list-style-type: none"> • Inlet section: > 10 × DN straight section • Outlet section: > 5 × DN straight section <p>DN = Sensor nominal diameter</p>
Warm-up phase	30 min

Maximum measuring error

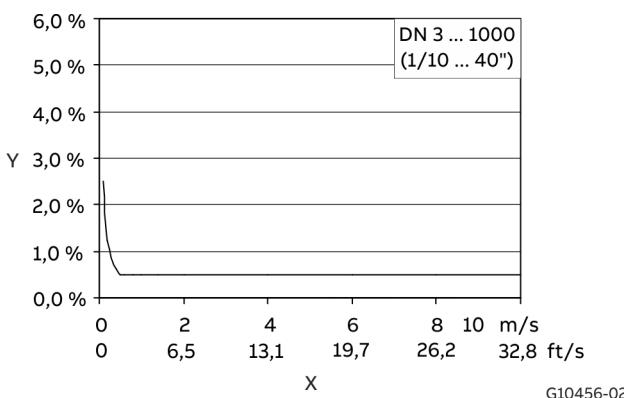

Pulse output

- DN 3 to DN 1000 (1/10 to 40''):
 $Q > 0.05 Q_{\max}DN \pm 0.5\%$ of measured value
- $Q < 0.05 Q_{\max}DN \pm 0.00025 Q_{\max}DN$

$Q_{\max}DN$ = maximum flow rate of the nominal diameter at 10 m/s

Analog output effects

Same as pulse output plus $\pm 0.1\%$ of measured value ± 0.01 mA

Y Measured error ± of measured value

X Flow velocity v

Figure 1: Analog output effects

Grounding

The grounding of the flowmeter sensor is essential for both safety reasons, and to ensure trouble-free operation of the electromagnetic flowmeter.

The ground screws on the flowmeter sensor are to be brought to ground potential. For technical reasons, this potential should be identical to the potential of the metering fluid, if possible.

For plastic or insulated lined pipelines, the fluid is grounded by installing ground plates. When there are stray potentials present in the pipeline, we recommend installing a ground plate on both ends of the flowmeter sensor.

To comply with the EMC and Low Voltage Directives, the connection box/transmitter must be grounded in addition to the meter tube of the flowmeter sensor.

Installation conditions

Flow direction

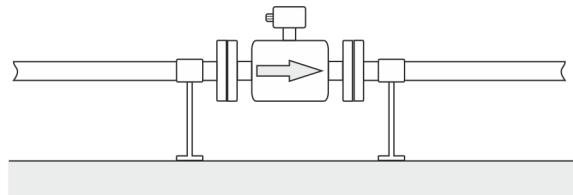

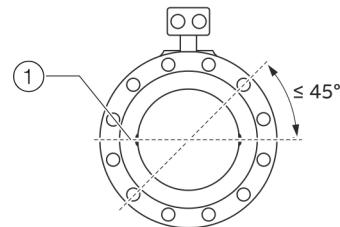

Figure 2: Flow direction

The device measures the flow rate in both flow directions. Forward flow is the factory setting, as shown in Figure 2.

Electrode axis

① Electrode axis

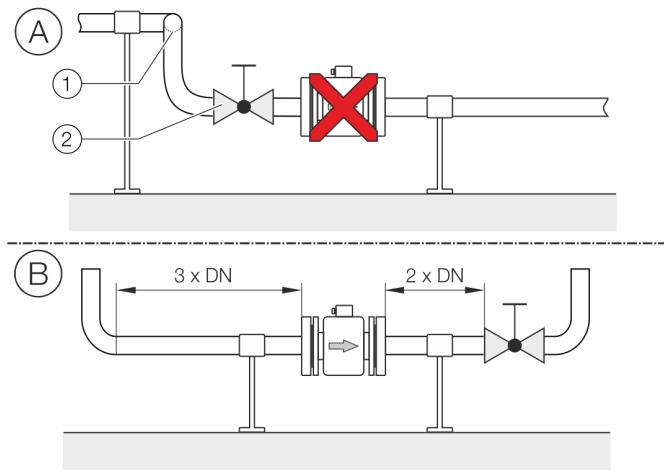

Figure 3: Orientation of the electrode axis

The flowmeter sensor should be mounted in the piping in such a manner that the electrode axis is oriented as horizontally as possible.

A maximum deviation of 45° from the horizontal position is permissible.

... General data

Inlet and outlet sections

① Double manifold

② Turn-off device

Figure 4: Inlet and outlet section, turn-off devices

The measuring principle is independent of the flow profile as long as standing eddies do not extend into the measured value formation, such as may for example occur after double manifolds, in the event of tangential inflow, or where half-open gate valves are located upstream of the sensor. In such cases, measures must be put in place to normalize the flow profile.

- Ⓐ Do not install fittings, manifolds, valves, etc., right before the flowmeter sensor.
- Ⓑ Inlet / outlet sections: length of the straight piping upstream and downstream on the sensor.
Experience has shown that, in most installations, straight inlet sections $3 \times \text{DN}$ long and straight outlet sections $2 \times \text{DN}$ long are sufficient (DN = nominal diameter of the flowmeter sensor).
For test stands, the reference conditions of $10 \times \text{DN}$ straight inlet and $5 \times \text{DN}$ straight outlet must be provided, in accordance with EN 29104 / ISO 9104.
Valves or other turn-off devices should be installed in the outlet section.
Valve flaps must be installed so that the valve damper plate does not extend into the flowmeter sensor.

Mounting position

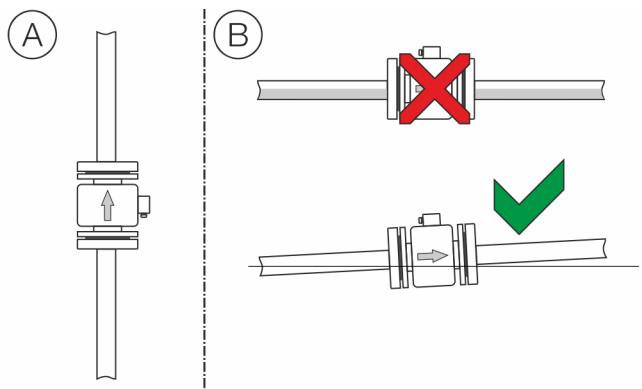

Figure 5: Mounting position

- Ⓐ Vertical installation for measuring abrasive materials, preferably with flow in upward direction.
- Ⓑ For a horizontal installation, the meter tube must always be completely filled with the measuring medium. Provide for a slight incline of the connection for degassing.

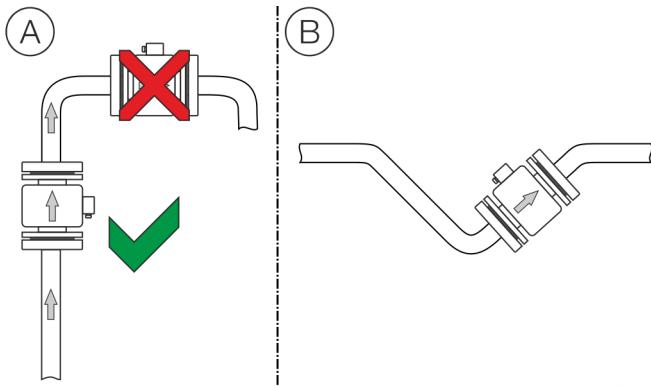

Free inlet or outlet

Figure 6: Free inflow and outflow

- Ⓐ For a free outflow, do not install flowmeter at the highest point of the piping or on its outflow side, since the measuring tube may run empty, creating air bubbles.
- Ⓑ For free inflow/outflow, provide an invert to make sure that the piping is always full

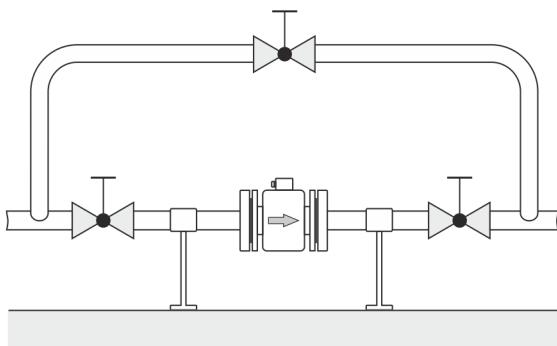

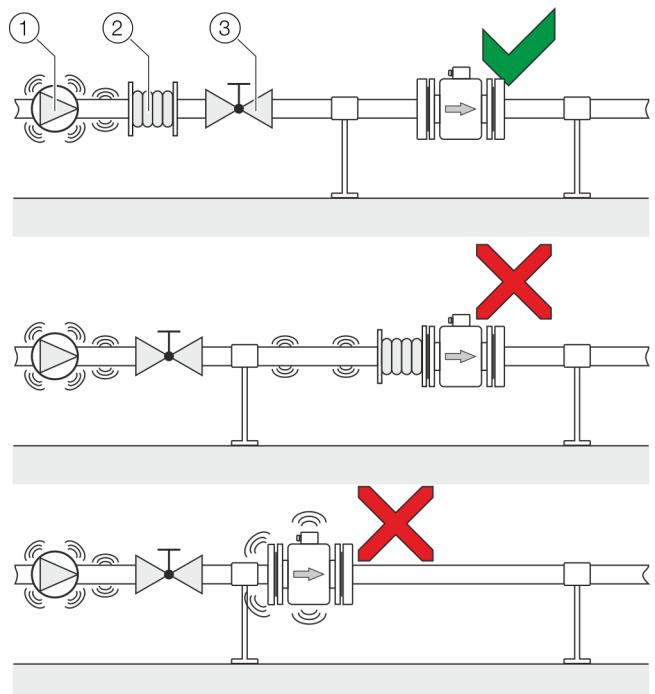

Mounting with heavily contaminated measuring media

Figure 7: Bypass line

For strongly contaminated measuring media, a bypass line in accordance with the figure is recommended so that operation of the system can continue to run without interruption during mechanical cleaning.

Mounting with pipe vibration

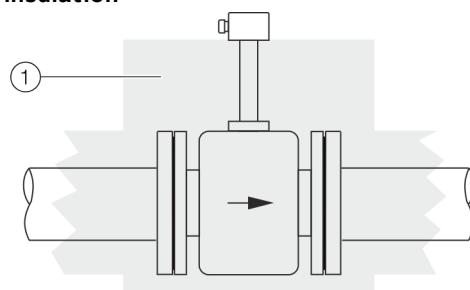

(1) Pump
 (2) Damping device
 (3) Turn-off device

Figure 8: Vibration damping

If pipe vibration occurs, it needs to be damped using damping devices.

The damping devices must be installed outside the support section and outside of the piping section between the turn-off devices.

Avoid connecting damping devices directly to the flowmeter sensor.

Sensor insulation

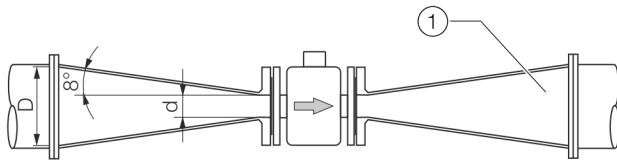

(1) Insulation

Figure 9: Insulation of the flowmeter sensor

In the high temperature design, the flowmeter sensor can be completely thermally insulated. After the unit is installed, the piping and sensor must be insulated in accordance with the figure.

... General data

Installation in piping with larger nominal diameter

(1) Reducer

Figure 10: Using reducers

Determine the resulting pressure loss when using reducers:

1. Determine diameter ratios d/D .
2. Determine the flow velocity based on the flow rate nomogram (**Figure 11**).
3. Read the pressure loss on the Y-axis in **Figure 11**.

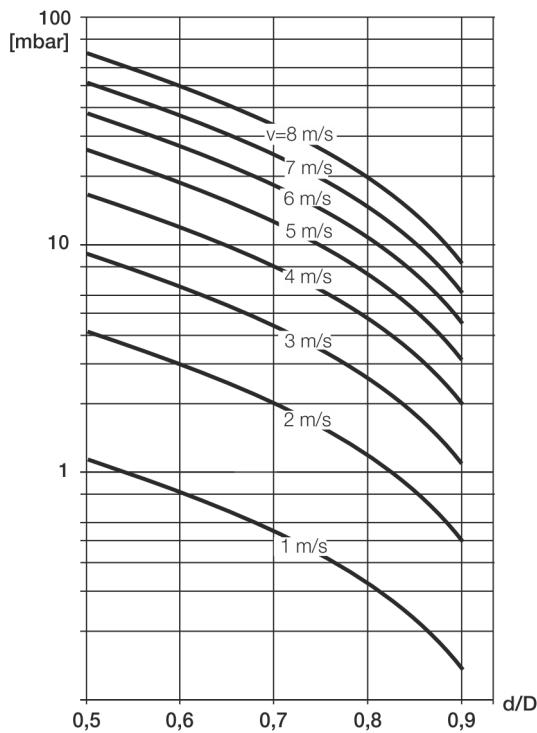

Figure 11: Flow rate nomogram for flange transition piece at $\alpha/2 = 8^\circ$

1) Connection dimensions for the flange in accordance with DIN2501 / EN1092-1 or ASME or JIS.

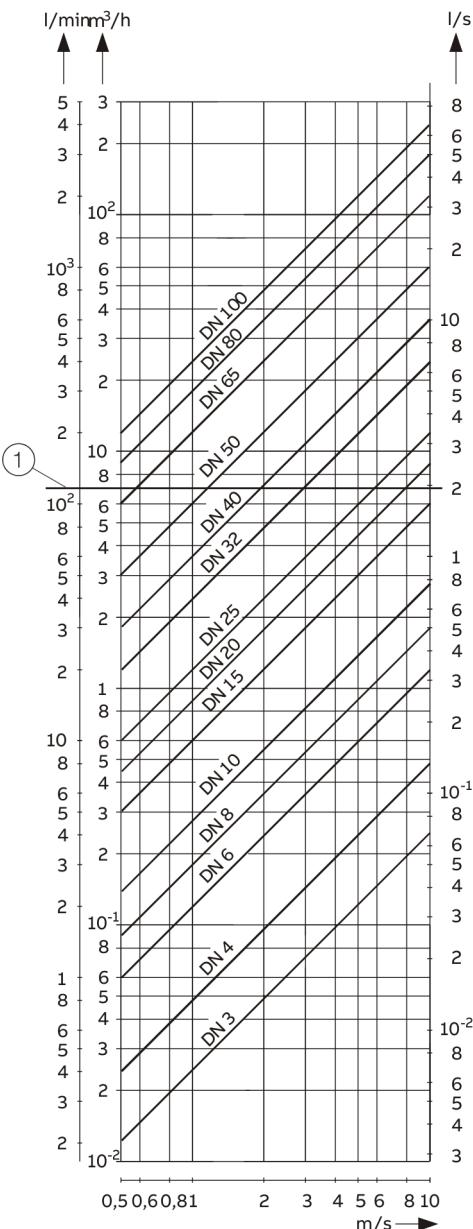

2) PN63, PN100 available from nominal diameter DN 25.

3) CL600 available from nominal diameter DN 25.

Other meter sizes, pressure stages and temperature classes are available upon request.

Flow rate nomogram

The volume flowrate is a function of the flow velocity and the diameter of the flowmeter. The flowrate nomograph indicates the flowrate range for a specific flowmeter nominal diameter and which flowmeter nominal diameters are suitable for a specific flowrate.

(1) Example

Figure 12: Flow rate nomogram DN 3 to DN 100 (10 to 4")

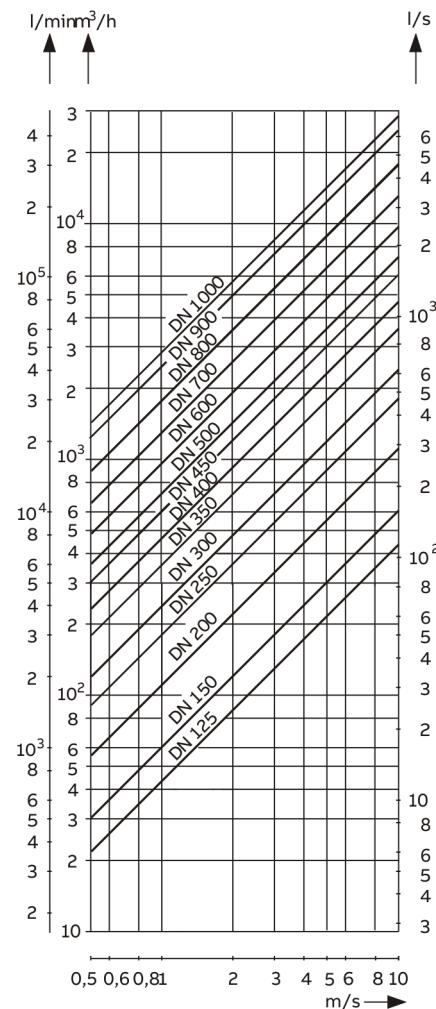

Figure 13: Flow rate nomogram, DN 125 to DN 1000 (5 to 40")

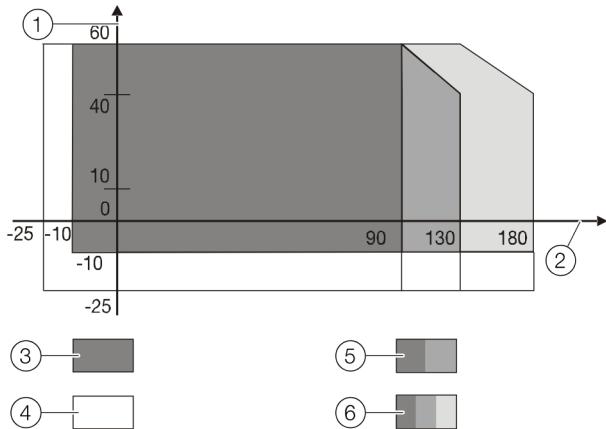

Example:

Flowrate = 7 m^3/h (max. value = range end value). Sensors with nominal diameters DN 20 to DN 65 ($\frac{3}{4}$ to $2\frac{1}{2}$ ") are suited for a flow velocity of 0.5 to 10 m/s.

Model SE41F

Specifications

Temperature graph

- ① Ambient temperature °C
 ② Measuring medium temperature °C
 ③ Standard flange (steel): Hard/soft rubber max. 90/60 °C (194 to 140 °F)
 ④ Stainless steel flange
 ⑤ Standard flange (steel): PTFE / PFA / ETFE max. 130 °C (266 °F)
 ⑥ High temperature: thick PTFE / PFA max. 180 °C (356 °F)

Figure 14: Measuring medium temperature dependent on the ambient temperature

Max. permissible cleaning temperature

PTFE-, PFA-design

CIP cleaning	Liner	T _{max}	t _{max}	T _{amb.}
		Flowmeter	Min	
sensor				
Steam cleaning	PTFE, PFA	150 °C (302 °F)	60	25 °C (77 °F)
Wet cleaning	PTFE, PFA	140 °C (284 °F)	60	25 °C (77 °F)

If the ambient temperature is > 25 °C, the difference must be subtracted from the max. cleaning temperature.

$$T_{\text{max}} - \Delta \text{ °C} \cdot \Delta \text{ °C} = (T_{\text{amb.}} - 25 \text{ °C})$$

Weight

1 If a grounding plate is fitted (fastened to one side of the flange), dimension L increases as follows: by 3 mm for DN 3 ... 100, and by 5 mm for DN 125.

2 If protection plates are fitted (fastened to both sides of the flange), dimension L increases as follows: by 6 mm for DN 3 ... 100, and by 10 mm for DN 125.

Tolerance for L: DN 25 to 100 +0 / -5 mm, DN 150 to 200 +0 / -5 mm

Tolerance Di: hard rubber: +1 / -3 mm

All nominal pressures (PN63, PN100, CL600) are available with hard rubber only

Specifications

Minimum permissible absolute pressure

Liner	Nominal diameter DN	P _{Operation} mbar abs	at	T _{Operation} ¹⁾ °C
PFA	3 to 100 (1/10 to 4")	0	≤	130 °C (266 °F)

1) For CIP/SIP cleaning, higher temperatures are permitted for limited time periods; refer to the table entitled 'Maximum permissible cleaning temperature'.

Maximum permissible cleaning temperature

CIP cleaning	Liner	T _{max}	T _{max} Minutes	T _{amb.}
Steam cleaning	PFA	150 °C (302 °F)	60	25 °C (77 °F)
Wet cleaning	PFA	140 °C (284 °F)	60	25 °C (77 °F)

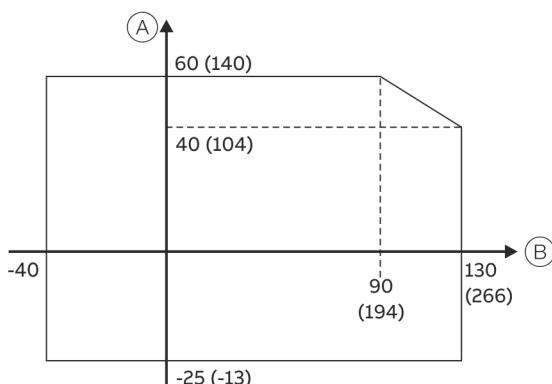

If the ambient temperature is > 25 °C (77 °F), then the difference must be subtracted from the max. cleaning temperature.

$$T_{max} - \Delta °C, \Delta °C = (T_{amb} - 25 °C)$$

Maximum Allowable Temperature Shock

Lining	Temp shock max. temp. diff. °C	Temp. gradient °C/min
PFA	Any	Any

Maximum permissible ambient temperature as a function of measuring medium temperature

(A) Ambient temperature T_{amb}.

(B) Measuring medium temperature T_{medium}

... Mounting accessories

Weld-in adapter

For sensors with welded spud connection, welding adapters are available.

Material	Nominal diameter	Ordering number
Stainless steel 1.4301 (AISI 304)	DN 3 to DN 10 (1/10 to 3/8 in.)	D413C470U01
	DN 15 (1/2 in.)	D413C471U01
	DN 20 (3/4 in.)	D413C472U01
	DN 25 (1 in.)	D413C473U01
	DN 32 (1-1/4 in.)	D413C474U01
	DN 40 (1-1/2 in.)	D413C475U01
	DN 50 (2 in.)	D413C488U03
	DN 65 (2-1/2 in.)	D413C461U09
	DN 80 (3 in.)	D413C496U03
	DN 100 (4 in)	D413C498U03

The adapter is a tool for sensors with the 'welded spud' process connection. It enables these weld stubs to be welded into the pipeline in a coplanar manner.

Transmitter

Specifications

Figure 30: Transmitter FSM4000-S4

Meas. range	Any flow range whose 100% value corresponds to a flow velocity between 0.5 m/s and 10 m/s can be selected.	
Minimum conductivity	$\geq 20 \mu\text{S}/\text{cm}$ standard	DN 10 to DN 1000 ($\frac{1}{8}$ to 40")
	$\geq 20 \mu\text{S}/\text{cm}$ with preamplifier	DN 3 to DN 8 ($\frac{1}{25}$ to $\frac{5}{16}$ ")
	$\geq 5 \mu\text{S}/\text{cm}$ with preamplifier	DN 3 to 1000 ($\frac{1}{25}$ to 40")
	$\geq 0.5 \mu\text{S}/\text{cm}$ with preamplifier	DN 10 to DN 1000 ($\frac{1}{8}$ to 40")
Repeatability (measurement period = 100 s)	DN 3 to 1000 (1/10 to 40"); $\leq \pm (0.1\% \text{ of measured value} + 0.01\% \text{ of } Q_{\max, \text{DN}})$	
Response time	$t_r = 70 \text{ ms}$ (0 to 66 %) Fast operating mode $t_r = 200 \text{ ms}$ (0 to 66 %) Standard/piston pump operating mode	
Power supply	$U = 100 \text{ to } 230 \text{ V}, 50/60 \text{ Hz}$ $U_{\text{rat}} = 85 \text{ to } 253 \text{ V}, 50/60 \text{ Hz}$ $50/60 \text{ Hz} \pm 6\%$ 20.4 to 26.4 V AC, 20.4 to 31.2 V DC, ripple $\leq 5\%$	
Power consumption	$S \leq 45 \text{ VA}$ (sensor including transmitter)	
Ambient temperature	$-20 \text{ to } 60^\circ\text{C}$ ($-4 \text{ to } 140^\circ\text{F}$)	
Storage temperature	$-20 \text{ to } 80^\circ\text{C}$ ($-4 \text{ to } 176^\circ\text{F}$)	

Relative humidity

Acc. to IEC 60068-2-30 classification of environmental conditions, natural factors, temperature and air humidity.

No effect under the following operating conditions:
temperature ranging from 25 to 55 °C (77 to 131 °F) and a relative air humidity of 94 to 97 %.

Vibration

In accordance with IEC 60068-2-6 (03/95), grouping of devices according to table C2 for general industry applications. No additional effect on the following levels of vibration. Frequency range 10 to 55 Hz; amplitude max. 0.15 mm.

IP rating in accordance with EN 60529

IP 67 for field-mount housing and NEMA 4X

Design

Field-mount housing made of cast aluminum per DIN 1725, painted.

Paint coat thickness 80 µm. Lower section (RAL 7012), upper section (RAL 9002). For dimensions, see **Dimensions** on page 66. Weight, approx. 3.3 kg.

Electrical connections

Cable entry M20 × 1.5, NPT, PF with adapter (upon request), screw terminals

Damping (1τ)

Can be configured from 0.07 to 20 s

Low flow cutoff

Can be set to 0 to 10 % of the final value

Signal cable

Max. cable length between flowmeter sensor and transmitter is:

- 50 m for the standard design and versions with automatic zero return, from DN 10 (3/8") and from 20 µS/cm.
- 200 m for designs with preamplifier.

A 5 m signal cable is included with each flowmeter. If a cable longer than 5 m is required, refer to the ordering information for the sensor.

Coil supply cable

Is required to connect the flowmeter sensor to the transmitter. For EMC reasons, the 2-wire cable is shielded. A 5 m cable is included with each flowmeter. If a cable longer than 5 m is required, refer to the ordering information for the sensor.

... Transmitter

Forward flow/reverse flow measurement

Flow direction is indicated by direction arrows in the display and over the contact for external signaling. The contact output can also transmit this information.

Display

4-line, illuminated graphic display. To improve readability, the flow information can be displayed on two lines with larger characters. This allows the individual flowrate and output values to be displayed. Non-switching measured value presentation on dot-matrix display with max. 4 × 16 characters. A plaintext diagnostic display opens automatically when the system detects an error. An alarm condition can also be signaled via contact output.

Data backup

Via FRAM (Ferroelectric Nonvolatile Random Access Memory), all data over 10 years old is stored (without power supply) in the event of shut-off or failure of the line voltage. Additional security is provided by a serial FRAM installed in the transmitter and on the external connection board in which the parameter settings and process information are stored. This makes it easy to replace a transmitter – without parameterization – by simply uploading the stored data from the external FRAM.

Flow totalization

The flow is totalized in engineering units. The limits for the pulse value can be set, are dynamic and depend on the measuring range (Qmax) setting as well as the totalizer units selected. The limits are a min. (0.00016 Hz) and max. pulse frequency (5 KHz). Totalizer values for the forward and reverse flow can be displayed simultaneously when configuring the 'Display' parameter.

Parameter configuration

The display supports several languages (German, English, French, Finnish, Swedish, Italian, Spanish, Dutch or Turkish), and information can be entered using the three buttons in the dialog or via a communication interface with a PC, HART® protocol, PROFIBUS® or FOUNDATION Fieldbus®. The magnet stick can also be used to configure the flowmeter with the front door closed. Position the magnet stick over the magnet icons on the display cover.

Alarm signaling

A max-min alarm can be used with the transmitter. The max. and min. limit values can be set in the range from 0 to 103 % of the flow rate. When the flowrate is outside the alarm limits, an error message is displayed in the upper line and a contact is triggered. The contact output can also transmit this information.

Wiring error

Monitoring of magnet coil or electrode circuits for short circuits or wire breaks.

Isolation of input/output

The current output, pulse output, contact input and contact output are electrically isolated from the input circuit and from each other.

Retrofitting

The transmitter with all its functions can also be used with older model electromagnetic flowmeters. The appropriate model number must be selected during parameter setting of the transmitter. It is also possible to use the transmitter with model 10D1422 flowmeters. A special FRAM ($C_s = 100\%$, $C_z = 0\%$) is required when retrofitting (see ordering information for the transmitter) and applies for nominal diameter range DN 3 to DN 1000 (1/10 to 40") in low voltage design only.

Extended diagnostic functions

Recorded parameters / fingerprints

Cyclical (10 sec to 7 days) or manual acquisition of parameters.

The data sets are stored in the transmitter FRAM (with time stamp / operating hours counter). A maximum of 10 sets can be stored. When the eleventh record is stored, the oldest data set is overwritten automatically.

Magnet coil circuit	AC voltage AC
	DC resistance (primary value for temperature)
	Temperature
	Insulation resistance (ground)
	DAC value (primary value for coil current)
Electrode circuit	Magnetic linearity
	Electrode voltage E1 (primary value for electrode balance)
	Electrode voltage E2 (primary value for electrode balance)
	Electrode balance
	Quality (signal-to-noise ratio)

The parameters can be checked for min.-max. errors. If the value is above or below the specified limit, a diagnostic error or warning, depending on the configuration, is triggered. The 'fingerprint' database integrated in the transmitter allows you to easily compare the values at the time of factory calibration or commissioning, for example, with the currently recorded values.

Users can store up to three different fingerprint data sets (commissioning, product1, product2) in the fingerprint database. The default fingerprint (optional) cannot be overwritten.

Detectable error states

Monitoring of ...	Detection of ...
Coil current / coil voltage / DAC value	Changes in the driver or coil circuit.
Coil resistance	Changes in coil circuit, e.g., fine short.
Coil temperature	Risk of overheating due to fluid.
Coil insulation resistance	Problems with the coil insulation. Can be caused, e.g., by dampness in the flowmeter sensor or in the connection box.
Linearity of magnetic circuit	External magn. field interference on the EMF, resulting in loss of accuracy.
Signal quality (signal-to-noise ratio)	Changes in fluid, e.g., gas bubbles, increased/reduced amount of solids.
Electrode balance	Distorted flow profile, e.g., due to improper installation. Detect interference in electrode circuit, e.g., failure of electrode due to insulating coating or a collapsed liner (vacuum shock).

Backward compatibility

The transmitter is suitable for connecting to flowmeter sensors over 20 years old. Occasionally, an adapter board may be required (for details, see the FSM4000 operating instructions).

The following flowmeter sensors are supported:
DS21, DS21F, DS41F, 10DS3111 (A-E), 10DI1425, 10D1422, 10D1462, 10D1472

... Transmitter

Inputs/Outputs

DC output (terminals 31, 32)

The following functions can be selected in the software:

- 0 to 20 mA load $\leq 560 \Omega$
- 4 to 20 mA load $\leq 560 \Omega$
- 0 to 10 mA load $\leq 1120 \Omega$
- 2 to 10 mA load $\leq 1120 \Omega$

Switch output (terminals 41, 42)

The following functions can be selected in the software:

- Forward/reverse flow direction signal
- Flow limit alarm (max. or min.)
- Collective alarm
- Empty meter tube

The contact output can be configured as normally open or normally closed.

Optoelectronic coupler

- 'closed': $0 \text{ V} \leq U_{CEL} \leq 2 \text{ V}$, $2 \text{ mA} \leq I_{CEL} \leq 220 \text{ mA}$
- 'open': $16 \text{ V} \leq U_{CEH} \leq 30 \text{ V}$, $0 \text{ mA} \leq I_{CEH} \leq 2 \text{ mA}$

Scaled pulse output (terminals 51, 52)

Maximum totalizer frequency 5 kHz. Pulse value per physical unit from 0.001 to 1000 / unit selectable in the software.

The pulse width can be configured from 0.100 to 2000 ms.

The version (active, passive) can be changed via jumpers.

Active

Voltage pulse 24 V rectangular

- Load $\geq 150 \Omega$
pulse width $\leq 50 \text{ ms}$, max. pulse frequency $\leq 3 \text{ Hz}$,
- Load $\geq 500 \Omega$
pulse width $\geq 0.1 \text{ ms}$, max. pulse frequency: 5 kHz.

Passive (optoelectronic coupler)

- 'closed': $0 \text{ V} \leq U_{CEL} \leq 2 \text{ V}$, $2 \text{ mA} \leq I_{CEL} \leq 220 \text{ mA}$
- 'open': $16 \text{ V} \leq U_{CEH} \leq 30 \text{ V}$, $0 \text{ mA} \leq I_{CEH} \leq 2 \text{ mA}$

Digital communication

HART® protocol

The device is registered with the HART Communication Foundation.

Note

The HART® protocol is an unsecured protocol, as such the intended application should be assessed to ensure that these protocols are suitable before implementation.

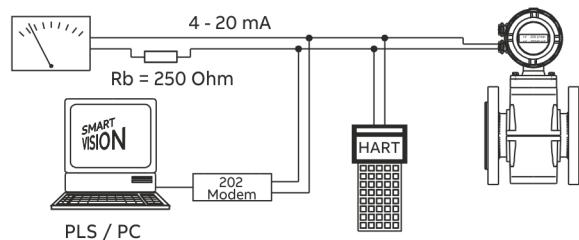

Figure 31: HART communication

HART protocol

Configuration	Directly on the device Software DAT200 Asset Vision Basic (+ HART-DTM)
Transmission	FSK modulation on current output 4 ... 20 mA according to Bell 202 Standard
Max. signal amplitude	1.2 mAss
Current output load	Min. 250 Ω , max. = 560 Ω
Cable	AWG 24 twisted
Max. cable length	1500 m
Baud rate	1200 baud
Display	Log. 1: 1200 Hz Log. 0: 2200 Hz

For additional information, see the separate interface description.

System integration

In conjunction with the DTM (Device Type Manager) available for the device (software version B.10 and higher), communication (configuration, parameterization) can occur with the corresponding framework applications according to FDT 1.21 (DAT200 Asset Vision Basic).

Other tool/system integrations (e.g., Emerson AMS/Siemens S7) are available upon request.

A free of charge version of the DAT200 Asset Vision Basic framework application for HART® or PROFIBUS is available upon request.

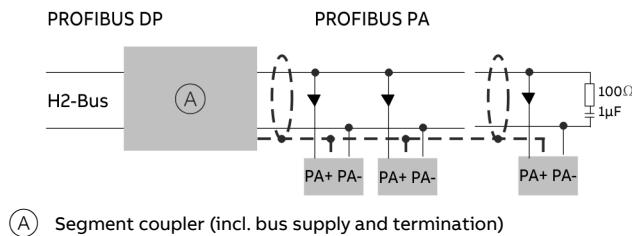

The required DTMs are contained on the DAT200 Asset Vision Basic DVD or in the DTM Library. They can also be downloaded from www.abb.com/flow.

PROFIBUS PA protocol

The interface conforms to Profile 3.0 (PROFIBUS standard, EN 50170, DIN 19245 [PRO91]).

Note

The PROFIBUS PA® protocol is an unsecured protocol, as such the intended application should be assessed to ensure that these protocols are suitable before implementation.

(A) Segment coupler (incl. bus supply and termination)

Figure 32: Example for PROFIBUS PA connection

PROFIBUS PA ID No.:	0x078C
Alternative Standard-	0x9700 or 0x9740
Ident-No.	
Configuration	Directly on the device Software DAT200 Asset Vision Basic (+ PROFIBUS PA-DTM)
Transmission signal	Acc. to IEC 61158-2
Cable	Shielded, twisted cable (acc. to IEC 61158-2, types A or B are preferred)

Bus topology

- Tree and / or line structure.
- Bus connection: Passive at both ends of the main bus line (RC element R = 100 Ω, C = 1 μF).

Voltage / current consumption

- Mean current consumption: 10 mA.
- In the event of an error, the FDEfunction (= Fault Disconnection Electronic) integrated in the device makes sure that the current consumption cannot exceed a maximum of 13 mA.
- The upper current limit is restricted electronically.
- The voltage on the bus line must lie in the range of 9 to 32 V DC

Bus address

In the case of devices with a PROFIBUS PA interface, check the bus address prior to commissioning. If no specifications exist to the contrary, the address is set to 126. During commissioning, the address must be set to a valid value in the range 0 to 125.

System integration

Use of PROFIBUS PA profile B, B3.0 ensures interoperability and interchangeability of units. Interoperability means that devices from different manufacturers can be physically connected to a bus and are communication-ready.

The devices can be interchanged without having to reconfigure the process control system.

To support interchangeability, three different GSD files (equipment master data) are provided, which can be integrated in the system.

For additional information, see the separate interface description.

The manufacturer-specific GSD file ABB_078C can be downloaded from <http://www.abb.com/flow>.

The standard GSD files PA1397xx.gsd can be downloaded from <http://www.profibus.com>.

... Transmitter

FOUNDATION Fieldbus® (FF)

Note

The FOUNDATION Fieldbus® protocol is an unsecured protocol, as such the intended application should be assessed to ensure that these protocols are suitable before implementation.

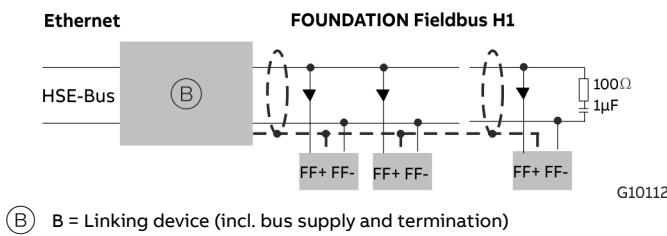

Figure 33: Example for FOUNDATION Fieldbus connection

FF interface	Compliant with FF standard 890/891 and FF 902/90
Interoperability test campaign no.	IT 027200 (ITK 4.6)
Manufacturer ID	0x000320
Device ID	0x0017
Configuration	<ul style="list-style-type: none"> • Directly on the device • Via services integrated in the system • National configurator
Transmission signal	Acc. to IEC 61158-2

Bus topology

- Tree and / or line structure.
- Bus connection: Passive at both ends of the main bus line (RC element $R = 100 \Omega$, $C = 1 \mu\text{F}$).

Voltage / current consumption

- Mean current consumption: 10 mA.
- In the event of an error, the FDEfunction (= Fault Disconnection Electronic) integrated in the device makes sure that the current consumption cannot exceed a maximum of 13 mA.
- The upper limit of the current is electronically restricted.
- The voltage on the bus line must lie in the range of 9 to 32 V DC

Bus address

The bus address is automatically assigned or can be set in the system manually.

Addresses are detected using a unique combination of manufacturer ID, device ID, and device serial number.

System integration

The following are required:

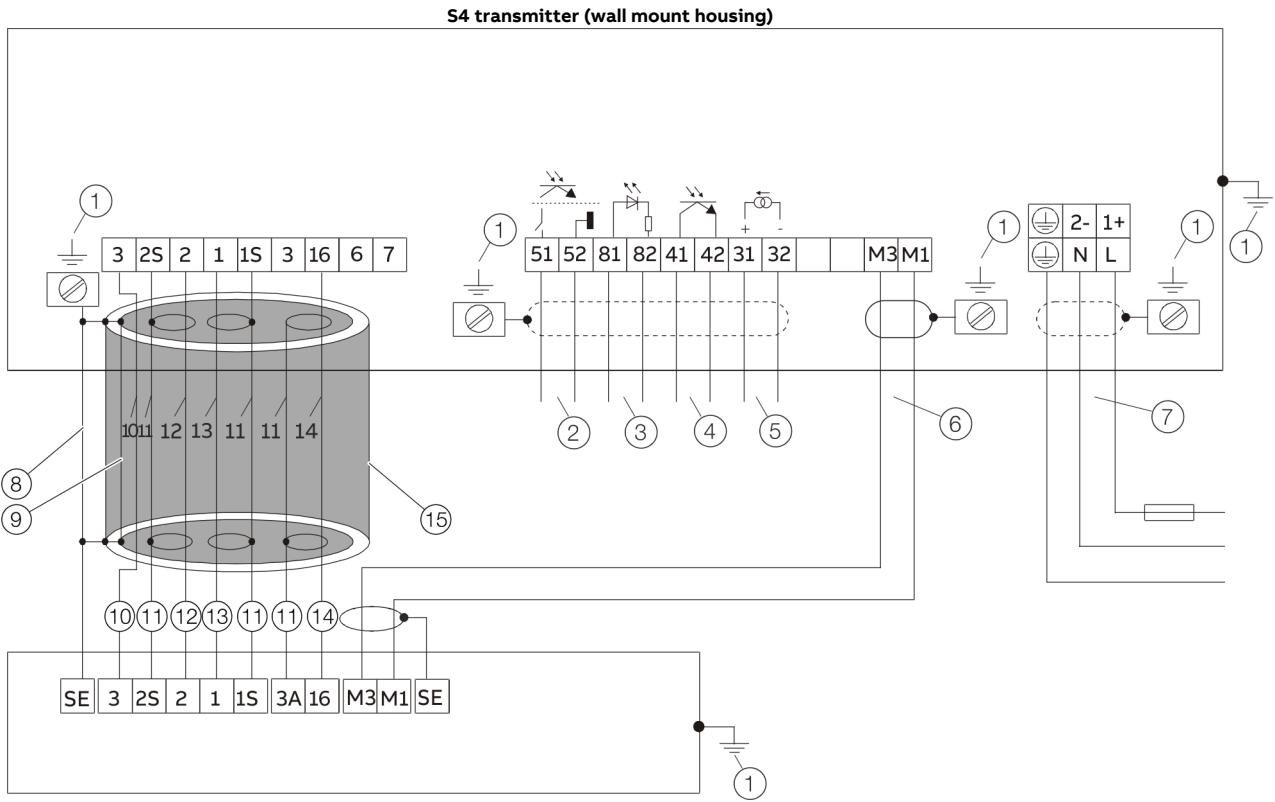

- DD (Device Description) file, which includes the device description.
- CFF (Common File Format) file is required for engineering the segment. Engineering can be performed online or offline.

For additional information, see the separate interface description.

The files required for operation can be downloaded from <http://www.fieldbus.org>.

We recommend that shielded output cables be used with the shields connected to the functional ground at one end.

... Transmitter

DN 3 to DN 1000 ($\frac{1}{10}$ to 40 ") with PROFIBUS PA / FOUNDATION Fieldbus

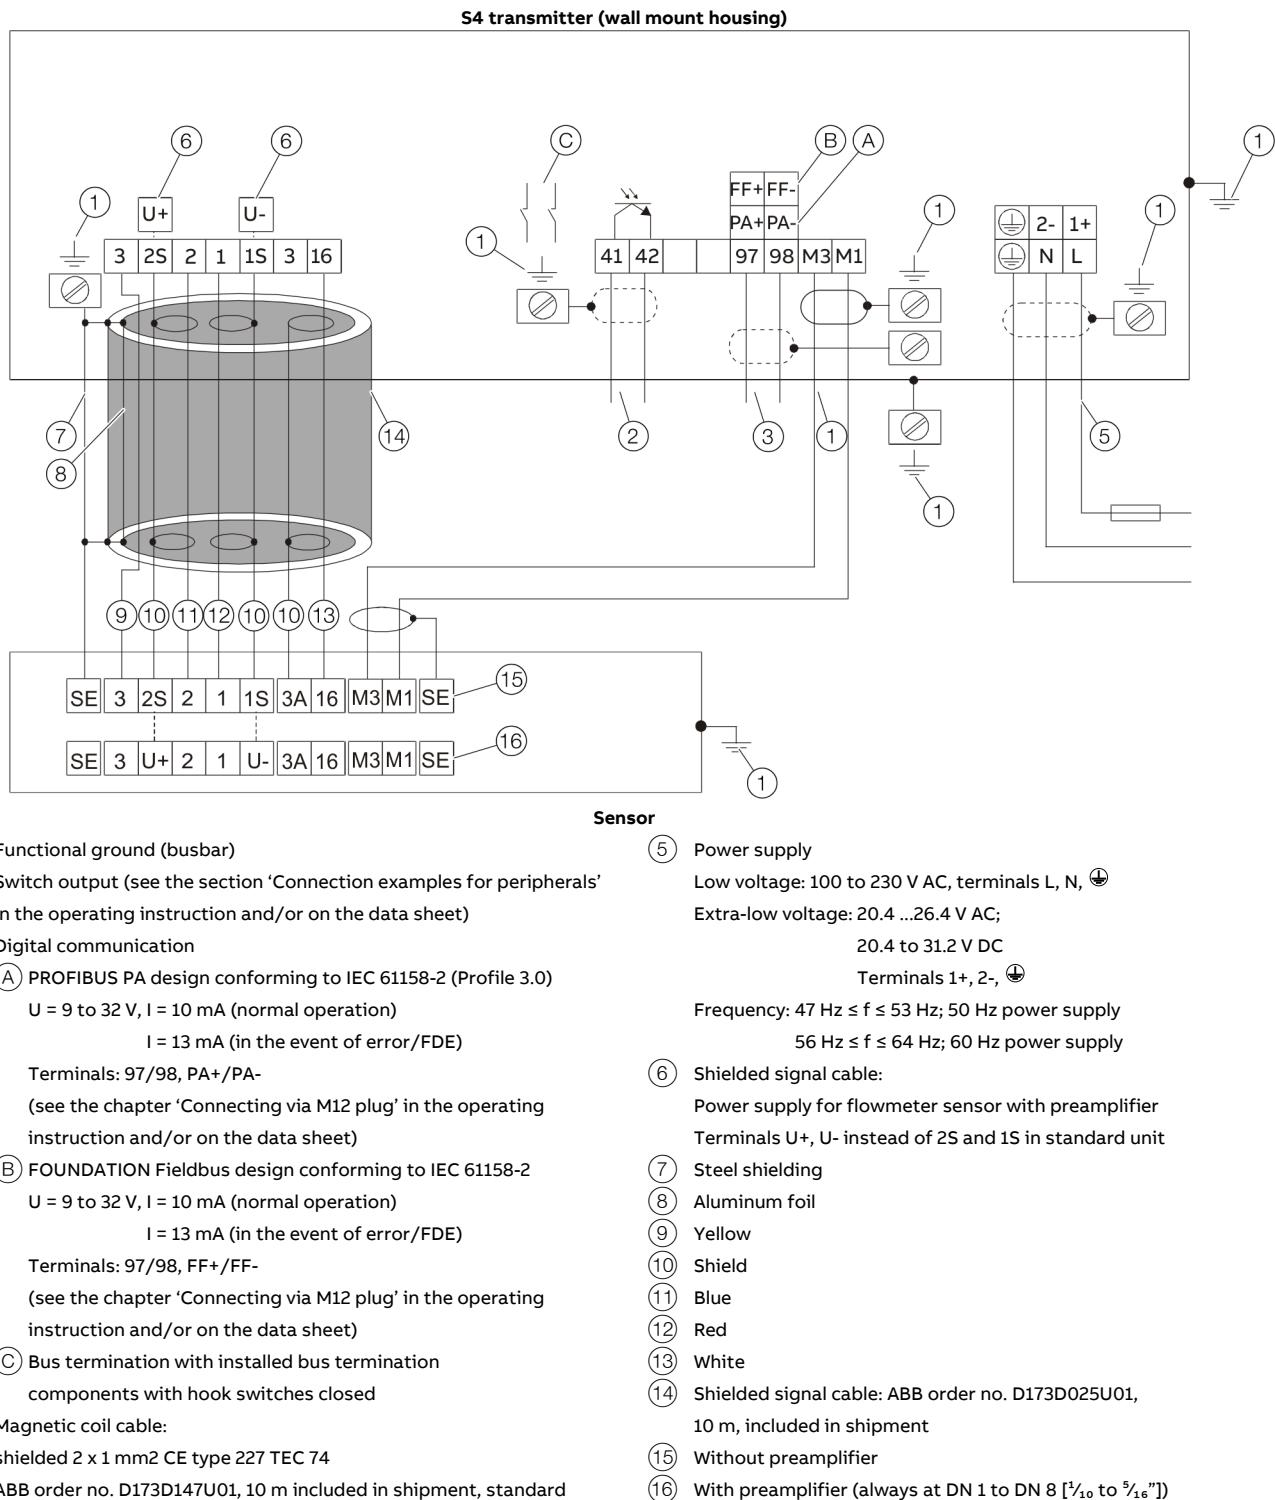

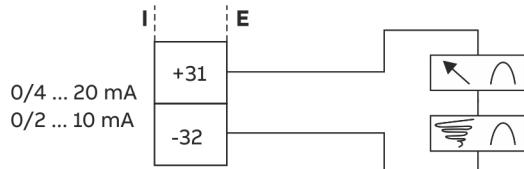

Figure 37: Electrical connection transmitter S4 with PROFIBUS PA / FOUNDATION Fieldbus

Note

- We recommend that shielded output cables be used with the shields connected to the functional ground at one end.
- If the sensor is equipped with a preamplifier for low conductivity or in nominal diameter range of DN 1 to DN 8 ($\frac{1}{10}$ to $\frac{5}{16}"), the shieldings of the signal wires must be connected to terminals U+ and U- on both the sensor and the transmitter.$

Connection examples for peripherals (incl. HART)

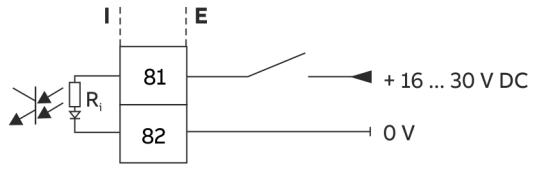

Current output

I internal

E external

Switch input

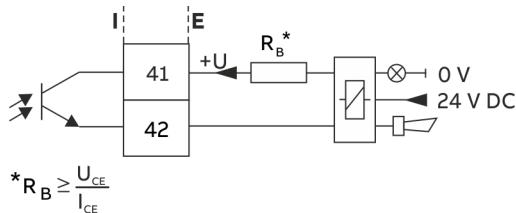

I internal

E external

Current output active with / without HART protocol (4 ... 20 mA)

Terminals	31, 32
Current output	can be selected via software
Function	Active
	0/4 ... 20 mA ($0 \Omega \leq R_B \leq 560 \Omega$) 0/2 ... 10 mA ($0 \Omega \leq R_B \leq 1120 \Omega$) (for HART only 4 ... 20 mA)

Switch output

I internal

E external

Switch input, passive

Terminals	81, 82
Current output	can be selected via software
Function	Passive
	<ul style="list-style-type: none"> 'On': $16 \text{ V} \leq \text{UKL} \leq 30 \text{ V}$ 'Off': $0 \text{ V} \leq \text{UKL} \leq 2 \text{ V}$

 $R_i = 2 \text{ k}\Omega$

Switch output for system monitoring

Terminals	41, 42
Current output	can be selected via software
Function	Passive
	<ul style="list-style-type: none"> 'closed': $0 \text{ V} \leq \text{UCEL} \leq 2 \text{ V}, 2 \text{ mA} \leq \text{ICEL} \leq 220 \text{ mA}$ 'open': $16 \text{ V} \leq \text{UCEH} \leq 30 \text{ V}, 0 \text{ mA} \leq \text{ICEH} \leq 2 \text{ mA}$

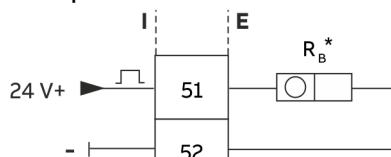

Note

Horn and alarm light are shown only as examples. Other suitable devices such as bells, sirens, buzzers, etc., can also be used.

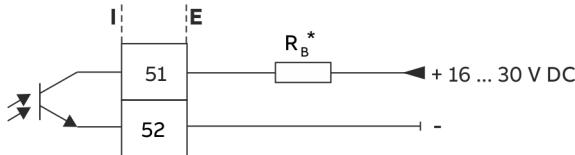

... Transmitter

Pulse output

Active pulse output

Pulse output, passive, optocoupler

$$* R_B \geq \frac{U_{CE}}{I_{CE}}$$

I internal

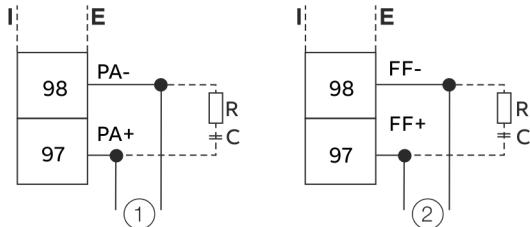

E external

Figure 41: Pulse output, active and passive, optoelectronic coupler

Current output active with / without HART protocol (4 ... 20 mA)

Terminals	51, 52
Current output	can be selected via software
Operating mode	Active / passive, selectable via jumper (see 'Commissioning' chapter in operating instruction)
f_{max}	5 kHz
f_{min}	0.00016 Hz
Adjustment range	Pulse / unit, pulse width (observe dynamic limits)
Function	<p>Active</p> <ul style="list-style-type: none"> • $150 \Omega \leq \text{load} < 10 \text{k}\Omega$: pulse width $\leq 50 \text{ ms}$, max. pulse frequency $\leq 3 \text{ Hz}$, • $500 \Omega \leq \text{load} < 10 \text{k}\Omega$ pulse width $\leq 0.1 \text{ ms}$, max. pulse frequency: 5 kHz <p>Passive</p> <ul style="list-style-type: none"> • 'closed': $0 \text{ V} \leq U_{CEH} \leq 2 \text{ V}$, $2 \text{ mA} \leq I_{CEH} \leq 220 \text{ mA}$ • 'open': $16 \text{ V} \leq U_{CEH} \leq 30 \text{ V}$, $0 \text{ mA} \leq I_{CEH} \leq 2 \text{ mA}$

PROFIBUS PA® / FOUNDATION Fieldbus®

I internal

(1) PROFIBUS PA

E external

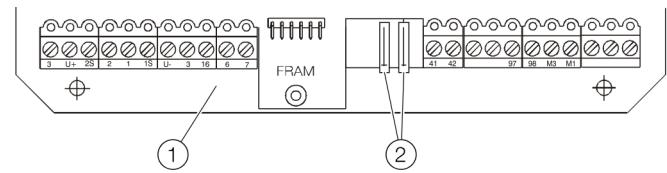

(2) FOUNDATION Fieldbus

Figure 42: Digital communication PROFIBUS PA / FOUNDATION Fieldbus

The resistance R and condenser C form the bus termination. They must be installed when the device is connected to the end of the entire bus cable.

R = 100 Ω ; C = 1 μF

Bus termination for S4 transmitter

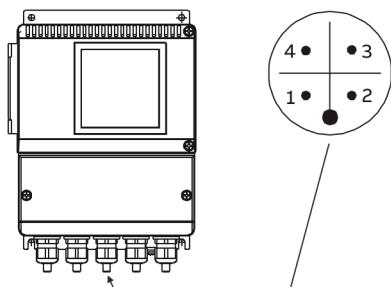

(1) Terminal board for field mount (FRAM)
(2) Hook switch for closing the bus termination

Figure 43: Bus termination

To terminate the bus if the instrument is at the end of the bus cable, the termination components in the S4 transmitter can be used. To do so, close both hook switches in the connection area of the transmitter.

Note

If the transmitter module is removed, bus termination is also canceled.

Connection via M12 plug (for PROFIBUS PA only)

Pin assignment (front view showing pin insert and pins)

1	PA+	3	PA-
2	nc	4	Shielding

Figure 44: M12 plug-in connector PROFIBUS PA

As an option, the bus can also be connected via an M12 plug instead of the cable gland (see order information for device). The device can be shipped completely prewired. For information about suitable connectors (type EPG300) and other accessories, refer to the data sheet 10/63.6.44 DE.
